Semiannual Report of Certified Projects

DMEA
DEPARTMENT OF THE INTERIOR
NOV 27 1956
REGION II
DENVER, COLORADO

RECEIVED
NOV 30 1956
D.M.E.A.

Reporting Period January 1, 1956 to June 30, 1956 (First)

Docket and Contract Number DMEA 487X, Contract Idm-E26

Operator Silver Bay Mines, Inc.

Commodity Lead-zinc

Mine Name Blackhawk mine

County and State San Juan County, Colorado

Date of Contract June 27, 1951 eff 5/1/52

Date of Certification Pseudo certification in amendment no. 4 (8/11/54)

Expiration Date of Royalty Payments June 27, 1965

Date of Examination for this Report October 30, 1956

Total Amount of Contract $29,593.29

Total Expenditures under Contract $25,634.79

Amount of Government Participation at 50 % ~~$12,817.40~~ $12,531.00

Royalty Payments this Period None

Previous Royalty Payments None

Total Royalty Payments to Date None

% Loan Repayment Completed None

Amount of Royalty Due None

Royalty Remarks There has been no production from the property.

Original Estimate of Reserves (from Final Engr.-Geol. Report): 900 tons indicated ore averaging 3.1 percent lead, 4.5 percent zinc, and 0.2 percent copper with 0.023 oz. gold and 2.3 oz. silver a ton.

Increase of Reserves by work performed subsequent to expiration or termination of contract: None

Revised Estimate of Reserves: Same as above.

RECEIVED NOV 30 1956 D.M.E.A.

Production this Period (Ore or Concentrates) None

Amount of Previous Production (since date of contract) None

Total DMEA Production to date None

% of Revised Reserves Mined None

Production Remarks: There has been no production from the property during and since the DMEA contract.

Note: On Uranium projects check with AEC to assure that our records are in agreement with theirs.

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA-487X (Zinc-Lead) Contract I-DMA-E26, Silver Bay Mines, Inc. (Black Hawk Mine) San Juan County, Colorado-Operator's Monthly Progress Reports for the months of September, 1953 and November, 1953 - FINAL PAYMENT

Enclosed are the original and four copies of Form MF-104 and Form MF-104A, Narrative Report, and Engineer's Report for the above periods which have been combined to form a single report to facilitate final payment to the Operator. The combined report constitutes the Operator's final claim under the terms of the contract. Also attached to each copy of the combined report are data relative to liquidation of property acquired under the contract.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment has been deferred pending resumption of work, or resolution of all matters relative to closing the account. The contract was terminated under the provisions of Amendment No. 4, as amended by Amendments 5 and 6.

All matters relative to closing the account have now been resolved, therefore, final payment is recommended as follows, which is in conformance with the Report of Review of contract expenditures by the Contract Administration and Audit Division, DMEA, dated June 7, 1956, which was released to this office June 14, 1956.

Basis for Final Payment

Total accepted cost	$25,062.00
Government participation at 50 percent	12,531.00
Total prior payments	11,955.69
Balance due the Operator	$ 575.31

Reconciliation with attached forms MF-104 for months of September and November, 1953

Amount reported by Operator on Form MF-104 for Sept., 1953	$2,366.00
Amount reported by Operator on Form MF-104 for Nov., 1953	273.00
Total	$2,639.00
Adjustment by Operator on Form MF-104 for Nov., 1953 in "Totals Previously Reported," to correct overcharge for 5 feet of drilling reported on Form MF-104 for September, 1953 at agreed unit cost of $45.50 per foot----------	227.50
Adjusted total	$2,411.50

Disallowances and Deductions

Disallowance, per audit dated Nov. 4, 1953------	$688.09	
Deduction, amount of property settlement, per Report of Review dated June 7, 1956*------	572.79	
Total disallowance and deductions		1,260.88
Balance		$1,150.62
Government participation at 50 percent		$ 575.31

* In addition to the property settlement, the Report of Review takes into account a discrepancy of $100.00 in the amount reported by the Operator in the "Totals to Date" column of Form MF-104 for November, 1953. The discrepancy is due to an error in addition of the "Totals to Date" column, and has no bearing on the above analysis relative to the final payment.

BUREAU OF MINES

Region IV

Building 20, Room 137
Denver Federal Center
Denver 14, Colorado
November 12, 1953

Memorandum

To: Executive Officer, Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 487, Contract Idm-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado -- Progress report for September 1953

Enclosed are the original and four copies of the above progress report--forms MF-104 and MF-104A, with a narrative by the subcontractor--and the original and six copies of W. L. Dare's memorandum covering inspection of the underground progress and reporting forms. Project operations are under a unit-cost amendment, allowing drifting at $45.50 a foot.

Dare disallows 5 feet of drifting at the unit cost of $45.50, or a total of $227.50, and approves 47 feet at $45.50, or $2,138.50. This disallowance is fully explained in his memorandum and has my approval. The subcontractor is aware of the difference and agreed to notify the contractor. Entries and extensions on the reporting forms are correct.

The $227.50 disallowance subtracted from $2,366.00 claimed leaves $2,138.50. Of this sum 50 percent, or $1,069.25, is recommended for payment and certified on the MF-104 form.

November 10, 1953

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMEA 487, Contract Idm-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado -- Progress report for September 1953

The Blackhawk mine was visited on October 8, 1953. Henry P. Ehrlinger, subcontractor, was not at the property at the time of the inspection. Total footage for 1953, through September 30, was measured as 112 feet with one of Ehrlinger's contract miners holding one end of the tape. This meant that the September advance was 52 feet. When Ehrlinger was contacted that evening at his home in Silverton, he stated that this figure corresponded with his measurement, and he later reported such to Silver Bay Mines, Inc.

When the property was visited on November 3, 1953, (no advance in October) another check of the total advance was made with Ehrlinger holding one end of the tape, and the total advance was found to be 107 feet. This distance was rechecked, and Ehrlinger agreed with its correctness. This means that as 52 feet is claimed for September, and approval can be given to only 47 feet, a disallowance of 5 feet at the agreed unit cost is necessary.

As noted in the inspector's memorandum accompanying the August report, on September 2, 1953, it was recommended to the subcontractor to turn the drift as tight as possible to get back on the vein. In October, Ehrlinger turned the drift with an easy curve and consequently did not intersect the vein. He hit the water course he describes in the narrative and thought that this possibly was the vein. He was definitely instructed on October 8, 1953, to stop work in this face, return to the point in the drift where the vein turned north, and drift along it, keeping it in the breast at all times.

Although it is believed the subcontractor used poor judgement when he lost the vein, it was his honest belief that he would

pick up the vein seen after he lost it. Consequently, the footage as reported, minus 5 feet, is approved.

Payment to the operator is recommended as $1,069.25, which is 50 percent of the $2,366.00 claimed minus $227.50 disallowed.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature [illegible] Title Executive Officer Date JUN 18 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

BUREAU OF MINES

Region IV

Building 20, Room 137
Denver Federal Center
Denver 14, Colorado
April 6, 1954

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMEA 487, Contract IDM-E26 Amended (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado--Progress report for November 1953

The Blackhawk mine was last visited on December 2, 1953. On the date of the inspection the subcontractor had advanced the spur drift following the Big Indian vein a total of 6 feet. Another round was broken to a total of 12 feet but was not mucked out. Subsequent to the visit, the subcontractor mucked out the second round, but as reported by W. W. Bentley, advisor representative for the operator, and later by the subcontractor in a letter to the Region IV Executive Officer, dated January 16, 1954, about 2 feet of bottom did not pull (fig. 1). Bentley was informed that this last 6 feet could not be approved; consequently, the operator did not make claim for it.

Results of 22 samples taken along 205 feet of vein exposure is as shown on the attached figure 1. Sample WLD-23 is noted as questionable. Samples, wherever possible, were taken at 10-foot intervals, and these samples are composites of the vein between both walls of the drift.

Sample results have shown a major portion of the vein material exposed to be substantially below marginal grade, except for approximately 60 feet, samples WLD-31 to WLD-35, inclusive (fig. 1). Along this 60-foot interval, the vein averages 2.93 feet wide with an average assay value of 0.023 ounce gold, 2.3 ounces silver per ton, 3.1 percent lead, 4.5 percent zinc, and 0.2 percent copper. Ore reserves are calculated laterally over a distance of 60 feet, using a dip distance of 30 feet above and below the drift. Indicated reserves, based on the average assay width of the vein, are estimated as 900 tons with the above average assay as reported in the recent memorandum recommending Certification of Discovery or Development.

Stage II drifting is correctly reported on form MF-104A. Payment to the operator, based on the estimated, agreed unit cost of $45.50 per foot of advance, is recommended as $136.50, which is 50 percent of the allowable $273.00 claimed. Due to the uncertainty of project resumption, it is recommended that the Executive Officer, Region IV, be notified of possible deferment of this payment until the project work is continued.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Docket DMEA 487 (Lead-Zinc)
Contract I-DMA-E26
Silver Bay Mines, Inc.
San Juan County, Colorado

Dear Mr. Liljenquist:

Consistent with the authority delegated to this office under Order No. 2808 from the Office of the Secretary, Department of the Interior, the United States of America, acting through the Department of the Interior, Defense Minerals Exploration Administration, does hereby accept your bid and proposal, dated May 18, 1956, in the amount of $572.79 in the liquidation of the jointly owned property and unexpended portion of materials and supplies acquired under Contract I-DMA-E26.

The sum of $572.79, reflecting both your and the Government's interests in the property liquidation, will be deducted from the gross amount of claims by you held pending in this office for reimbursement under the terms of the Contract, thereby automatically making a deduction from monies due you of the amount of $286.40 due the Government in the transaction; provided the gross amount of claims by you held pending in this office is sufficient to permit that manner of reimbursing the Government for its interest in the jointly owned property settlement.

In the event monies held pending in this office are insufficient to cover the amount due the Government, you will be advised of the additional amount due when the final audit of contract expenditures has been completed by the Contract Administration and Audit Division.

Very truly yours,

JW Townsend

From: C. M. Harrer

Subject: DMA 437, Contract Idm-E26 (Lead-Zinc), Silver Bay Mines, Inc., San Juan County, Colorado — Settlement of the Government's interest in jointly owned property.

C. V. Liljenquist, secretary of Silver Bay Mines, Inc., has submitted the highest of three bids on property owned jointly with the Government; letter of May 18, 1956. Pertinent data on this highest bid is tabulated as follows:

Salvageable items	Cost	Highest Bid	Percent of Cost
220 ft. of 2" and 1" pipe	$114.79 - new	$34.80	30.3
640 ft. of 20 lb. rail	184.71 - used	92.36	50.0
875 ft. of 12" flexipipe and 1-90° ell	917.13	183.43	20.0
6 mine cars, 3 new and 3 old	724.00	262.20	36.2

The mine is very wet and the above items have received severe usage for 4 to 5 years. It is therefore recommended that the bid by Silver Bay Mines, Inc. be accepted.

RE: Docket DMEA 487 (Lead-Zinc)
Contract I-DMA-E26
Silver Bay Mines, Inc.

Dear Mr. Traver:

This constitutes our proposal covering the settlement of the Government's interest in the jointly owned property acquired under the above captioned contract.

The following is an abstract of bids received from Tech-Ser Mining Company, Argyle Mining & Milling Corporation and a bid from our Company, Silver Bay Mines, Inc.

Tech-Ser Mining Company's BID

Pipe	$ 30.00	
Mine Track & Accessories	85.00	
Cars (3Mine)	250.00	
Ventilating tube	150.00	
Total.	$ 515.00	

Argyle Mining & Milling Corporation BID

Pipe	$ 29.00	
Track	73.88	
Mine Cars & Miscl. Equip.	205.00	
Vent tubing	00.00	No Value
Total.	$ 307.88	

Silver Bay Mines, Inc. BID

Pipe	$ 34.80
Track	92.36
Mine Cars, etc.	262.20
Vent tubing	183.43
Total.	$ 572.79

In as much as we are the high bidder, and if our bid is accepted, we authorize the Government to deduct Two Hundred Eighty-six Dollars and forty cents ($286.40) from funds now witheld by them, pending final audit, and in the event the funds witheld is not sufficient to meet this obligation we will pay the difference upon receiving notice from your office.

Respectfully submitted,

Silver Bay Mines, Inc.

Re: Docket DMEA 487 (Lead-Zinc)
Contract I-DMA-E26
Silver Bay Mines, Inc.

Dear Mr. Traver:

In reply to your letter of January 5th and March 5th, 1956 we enclose herewith two bids from independent sources on the jointly owned property purchased under the above captioned contract.

We also wish to submit our bid on the following items:

Item	Cost to the Project
Pipe	$ 114.79
Track	184.71
Mine Cars, etc.	724.00
Vent Tubing	917.13
	$ 1,940.63

Our Bid is as follows	Total Value	Our Cost
Pipe	$ 34.80	$ 17.40
Track	92.36	46.18
Mine Cars, etc.	262.20	131.10
Vent Tube	183.43	91.72
	$ 572.79	$ 286.40

Their are no other unexpended items, which originally cost in excess of $50.00, on hand.

Very truly yours,

Silver Bay Mines, Inc.

Denver 14, Colorado
April 6, 1954

Memorandum

To: Executive Officer, DMEA Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 487, Contract IDM-E26 Amended (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado--Progress report for November 1953

Enclosed are the original and four copies of the above progress report--forms MF-104 and MF-104A, with narrative, engineer's progress map--and the original and six copies of W. L. Dare's memorandum, covering inspection of the underground progress and checking of the accounting forms. The amended contract has been prepared on the unit-cost basis, allowing 200 feet of drifting at $45.50 a foot. Documentation is not required.

Dare approved the 6 feet of drifting claimed after verification by measurements made underground December 2, 1953. The progress is properly recorded in the operator's narrative and on the MF-104A forms and all entries and extensions on the reporting forms are correct. Results of sampling and reserve estimates are adequately covered in the engineer's memorandum.

Payment is recommended and certified on the MF-104 forms of $136.50 or 50 percent of the total $273.00 claimed by the contractor.

Suggestion is made that payment of this voucher be deferred until operations are resumed after recess.

Building 20, Room 137
Denver Federal Center
Denver 14, Colorado
April 6, 1954

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Bare

Subject: DMRA 487, Contract IDM-296 Amended (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado--Progress report for November 1953

The Blackhawk mine was last visited on December 2, 1953. On the date of the inspection the subcontractor had advanced the spur drift following the Big Indian vein a total of 6 feet. Another round was broken to a total of 12 feet but was not mucked out. Subsequent to the visit, the subcontractor mucked out the second round, but as reported by W. W. Bentley, advisor representative for the operator, and later by the subcontractor in a letter to the Region IV Executive Officer, dated January 16, 1954, about 2 feet of bottom did not pull (fig. 1). Bentley was informed that this last 6 feet could not be approved; consequently, the operator did not make claim for it.

Results of 22 samples taken along 205 feet of vein exposure is as shown on the attached figure 1. Sample WLD-23 is noted as questionable. Samples, wherever possible, were taken at 10-foot intervals, and these samples are composites of the vein between both walls of the drift.

Sample results have shown a major portion of the vein material exposed to be substantially below marginal grade, except for approximately 60 feet, samples WLD-31 to WLD-35, inclusive (fig. 1). Along this 60-foot interval, the vein averages 2.93 feet wide with an average assay value of 0.023 ounce gold, 2.3 ounces silver per ton, 3.1 percent lead, 4.5 percent zinc, and 0.2 percent copper. Ore reserves are calculated laterally over a distance of 60 feet, using a dip distance of 30 feet above and below the drift. Indicated reserves, based on the average assay width of the vein, are estimated as 900 tons with the above average assay as reported in the recent memorandum recommending Certification of Discovery or Development.

Stage II drifting is correctly reported on form MF-104A. Payment to the operator, based on the estimated, agreed unit cost of $45.50 per foot of advance, is recommended as $136.50, which is 50 percent of the allowable $273.00 claimed. Due to the uncertainty of project resumption, it is recommended that the Executive Officer, Region IV, be notified of possible deferment of this payment until the project work is continued.

F. W. Everett, for

Remarks:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

224 New Customhouse
Denver 2, Colorado

Gentlemen:

During the month of November, 1953, the progress at the Blackhawk tunnel consisted of six feet advanced on the Big Indian Vein. The contractor abandoned an effort to swing the tunnel back on to the structure when a heavy flow of water was encountered in a wide open fissure at 107 feet from the measure point. He returned to the point where the vein turned sharply to the left, between 70 and 77 feet from the measure point, and advanced the six feet on the vein as reported above, and work in the future will be confined to the vein structure in this face. The total advance to date is 113 feet.

A recess for the winter months has been requested, and work is expected to resume in May.

Respectfully submitted

Grunwald
~~Kleinschmidt~~
Betty

From: W. L. Dare

Subject: DMEA 487, Contract Idm-826 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado -- Progress report for September 1953

The Blackhawk mine was visited on October 8, 1953. Henry P. Ehrlinger, subcontractor, was not at the property at the time of the inspection. Total footage for 1953, through September 30, was measured as 112 feet with one of Ehrlinger's contract miners holding one end of the tape. This meant that the September advance was 52 feet. When Ehrlinger was contacted that evening at his home in Silverton, he stated that this figure corresponded with his measurement, and he later reported such to Silver Bay Mines, Inc.

When the property was visited on November 3, 1953, (no advance in October) another check of the total advance was made with Ehrlinger holding one end of the tape, and the total advance was found to be 107 feet. This distance was rechecked, and Ehrlinger agreed with its correctness. This means that as 52 feet is claimed for September, and approval can be given to only 47 feet, a disallowance of 5 feet at the agreed unit cost is necessary.

As noted in the inspector's memorandum accompanying the August report, on September 2, 1953, it was recommended to the subcontractor to turn the drift as tight as possible to get back on the vein. In October, Ehrlinger turned the drift with an easy curve and consequently did not intersect the vein. He hit the water course he describes in the narrative and thought that this possibly was the vein. He was definitely instructed on October 8, 1953, to stop work in this face, return to the point in the drift where the vein turned north, and drift along it, keeping it in the breast at all times.

Although it is believed the subcontractor used poor judgement when he lost the vein, it was his honest belief that he would

pick up the vein soon after he lost it. Consequently, the footage as reported, minus 5 feet, is approved.

Payment to the operator is recommended as $1,069.25, which is 50 percent of the $2,366.00 claimed minus $227.50 disallowed.

NARRATIVE REPORT

DOCKET-DMA-487
CONTRACT-IDM-E-20

Silver Bay Mines,
September, 1953

The starting point for this month was MP-222 and at the end of the month it was MP-274, a distance of 52'.

During the month we made two turns in the drift to the Northeast of approximately 22° and 25° and at the point MP-274 the left lower lifter hit a strong water course and it was impossible to drill any further on this hole or to load it with powder. It was our opinion that this water would recede in a day's time as it was squirting out about 30' but at the end of the third day when it still had not abated we drilled a hole alongside of that and it was loaded and blasted.

Luckily this hole was balsted with ordinary fuse in lieu of the electric primers and the miners were out of the mine when it went off for a wall of water approximately three feet in depth flowed out of the tunnel for several hours and washed all of the accumulated waste rock along the sides of the tunnel out of the mine, or onto the tracks, for the entire length of the tunnel.

On going back into the tunnel we found that there was a vug of about three by four feet in width and about six feet in depth that had held this water for a long time and we also found that with the draining of this water the several water courses which had been encountered in previous work had been completely dried up and the forward part of the tunnel was dry except for the water that was still coming up from this vug.

It was on the advise of the Bureau of Mines Engineer that we drop back and continue the drift along the quartz seam that cut across the vein and this was to be started on the first part of October.

September 29, 1953

Memorandum

To: Executive Officer, Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMA 487, Amended Contract Idm-E26 (Lead-zinc), Silver Bay Mines, Incorporated (Blackhawk mine), San Juan County, Colorado - Progress report for August 1953

Transmitted herewith are the original and four copies of the above progress report--forms MF-104 and MF-104A, with subcontractor's narrative--and the original and six copies of W. L. Dare's memorandum covering inspection of the underground progress and reporting forms. The project is being operated under a unit-cost amendment to the original contract, allowing drifting at $45.50 a foot.

Dare verifies the 11 feet of advance on the Big Indian vein reported in the subcontractor's narrative and entered on the MF-104A form. Entries and extensions on the reporting forms are correct.

Payment is recommended and certified on the MF-104 form of $250.25, or 50 percent of the total $500.50 claimed by the contractor.

September 28, 1953

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMA 487, Amended Contract Idm-826 (Lead-zinc), Silver Bay Mines, Incorporated (Blackhawk mine), San Juan County, Colorado - Progress report for August 1953

The Blackhawk mine was visited on September 2, 1953. Henry P. Ehrlinger, subcontractor, was contacted at the property and underground progress checked. Total exploration advance was 60 feet.

In the inspector's memorandum accompanying the July progress report, it was noted that the vein appeared to be curving northward. At the time of the July inspection, August 19, 1953, the hanging wall of the vein, at the face, was about 12 feet from the floor of the drift. The vein is very flat, dipping about 35° to the northeast, and where it began to curve, Ehrlinger left the vein and drove straight ahead into the footwall. As a result, the material sloughed from the hanging wall, causing the cave reported in the July narrative. A few stringers were noted in the face that split from the vein into the footwall. It was recommended that the drift be turned northward to get back on the vein.

When progress was inspected on September 2, 1953, Ehrlinger had driven another 11 feet on the same bearing and the face of the drift was in the solid footwall. In his August narrative, the subcontractor goes into detail, reporting "movement" of the vein in conjunction with the shattered material and stringers in the footwall, which resulted in his decision to drive into solid ground. It is not believed that there has been any faulting, but rather just a case of failing to stay on the vein. It was again recommended that the drift be turned as sharp as possible to get back on the vein. Because of the flatness of the vein Ehrlinger will continue to have trouble unless he keeps the vein in the breast.

W. N. Bentley, U. S. Metals Corporation, has been assigned by the contractor to supervise the work.

The advance of 11 feet is approved. Payment to the operator, based on the agreed unit cost of $45.50 per foot of advance, is recommended as $250.25, which is 50 percent of the $500.50 claimed.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 83-38475

NARRATIVE REPORT

August 1953
Silver Bay Mines, Inc.

Docket Dem-487
Contract I-Dem-420

Reference is made to the July Narrative Report wherein the marking point was taken as 127' from the start. Measurements by both the Bureau of Mines Engineer and the undersigned showed it to be 132 and hence this correction in the measure of 5' will be taken into careful consideration in this month's work so that all of the measurements will agree in the future.

Starting point for this months work, as corrected, will be MP-211' and the measurement point for the last round in the month was MP-222' or a distance of 11' for the account for this month. This is now in agreement by all concerned.

During this month 76' of the tunnel were timbered with the conventional square sets of timber allowing for a clearance of 6½' in width and 5½' in height to meet the specifications. We were required to slab out the additional footage on the sides to make this tunnel meet also these specifications after timbering.

At a point approximately 71-72' we ran into a second crush structure that came in the face from the footwall side of the vein and forced the vein into the hanging wall. This was also followed by a large number of white quartz filled fissures which were noted for about 25' as the tunnel ran all coming in from the footwall side. We assumed that the strong fracture was responsible for the movement of the vein but felt that this was a local condition and that the vein would get back to it's normal strike in a short distance so we started to advance 25' thru the caved and unaltered material to hard ground and then make a curve to get cogged with the vein. We advanced to do this and then made a 25° turn to the northeast.

It is too early to state what happened to the vein at the point of the structure coming into it but at that place only a small amount of mineralization was noted.

September 4, 1953

Memorandum

To: Executive Officer, Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 487, Amended Contract IDM-E26 (Lead-zinc), (Blackhawk Mine), Silver Bay Mines, Inc., San Juan County, Colorado - Progress report for July 1953

Enclosed are the original and four copies of the above progress report, the initial one since amendment--forms MF-104 and MF-104A, with a narrative by the subcontractor--and the original and six copies of W. L. Dare's memorandum covering inspection of the underground progress and reporting form entries. The amendment is on short form MF-200(A) at an over-all unit cost of $45.50 per foot and requires no documentation.

Dare confirms the drift advance of 49.0 feet reported by the subcontractor in the narrative and entered by the operator on the MF-104A form. Dare finds the entries and extensions on the reporting forms correct.

Payment is recommended and certified on the MF-104 form of $1,114.75, or 50 percent of the total $2,229.50 claimed by the contractor.

September 4, 1953

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMEA 487, Amended Contract IDM-826 (Lead-zinc), (Blackhawk mine), Silver Bay Mines, Inc., San Juan County, Colorado - Progress report for July 1953

Henry F. Ehrlinger, subcontractor, was contacted at the Blackhawk mine on August 19, 1953. In his narrative the subcontractor reported that the exploration drift was advanced a total of 49 feet, but that a cave occurred near the face where they lost some 15 feet of the advance. At the time of the visit all but 8 feet of the cave was cleaned up and the face could be seen. The 49 feet was verified as correct.

The ground is very heavy, and to insure safety, about the last 30 feet of the 1952 work had to be retimbered, as well as about 40 feet of the new advance. The subcontractor is doing a very satisfactory job of timbering, using 12-inch round posts and caps.

The vein in the face has flattened, dipping about 35° northeast, and appears to be turning northward. The caved material broke from the hanging wall, which now stands some 12 feet above the drift floor.

Based on the agreed unit cost of $45.50 per foot of advance, payment to the operator is recommended as $1,114.75, which is 50 percent of the $2,229.50 claimed.

NARRATIVE REPORT

July, 1953

Docket DMA-487
Contract I-DMA-326

Reference is made to the Map of the Blacknawk Mine, San Juan County, Colorado, Brunton Compass Survey, WMB, 1952, Scale 1"-20' which will be used hereinafter for reference on the progress of the project and the various findings therein.

Work on this project was started on June 25th, 1953 by the present contractor and a report to this effect was sent to the U. S. Bureau of Mines under date of June 27th, 1953.

There were several days of rehabilitation work to be completed before actual work on the tunnel driving could be started. At the close of the last year all of the ventube was withdrawn from the mine and this all had to be replaced and installed and as the air was of such low oxygen content in the tunnel at the start of this work we could only make advances of about 100' per half shift and then allow the blower to push out the bad air.

When we finally arrived at the breast of the drift we found that about 15-20 tons of material had either caved, or had been washed down, from the Big Indian Vein and this materal had to be mucked up before work could commence. At that time we had some doubts as to whether, or not, we could drive the tunnel under a vein of the width of the Big Indiana which varied from 2.5' to 6.0' and had a talc seam on both the hanging wall and the footwall but we thought that we would tryo to do this and see if we could hold it by arching the top.

After receipt of the Map referred to above we located MP-127' as a pin in the cap of the last timber placed by the previous contractor and this was recorded as the base point but we did make a measurement to the breast of the tunnel at the nearest point which was at the bottom of the tunnel and we found this to be MP-154 and as the MP-127' was to be used as the base point for all future measurements we have used that thruout all of the work reported herein.

As stated above we drove the tunnel according to the specifications from MP-154' to MP-188' as of the 15th of July, 1953 but the round, although drilled, and blasted had not been mucked out at the time of measurement but it was assumed that it would be at MP-190' on the 16th after mucking and we found that it was at this point the following day. The contractors were reimbursed for the full footage that they had drilled and balsted but were only given Company time for cleaning up the caveins which were encountered upon entry.

On July 31st, 1953 the measurement was taken as best was possible due to the cavein that was encountered and we determined it to be at MP-203' which would make a total of 49' for the month of

July and this will be confirmed when the cavein reported later on in this report has been cleared away and all of the ground has been timbered so that this can be accomplished.

On July 17th, 1953, when our contractors were coming out of the tunnel with a load of waste the timbers in the main portal at a point approximately 50-60' from the adit gave way and dropped some 10-20 tons of oxidized material on the train causing a wreck and by a miracle did not kill the man that we operating the train. We had to clean this mess up and get the train out and then an attempt was made to shore this up so that the tunnel operations could continue but we found that all of the posts for about 30' were rotten and had a great deal of weight on them and we felt that the only thing to do was to retimber this section as rapidly as possible with new timber so as to protect the work. This work was approved by both Mr. William Lilenquist and Mr. Rowland Carnack and was completed on a two shift basis for six days with the removal of about 50-60 tons of material that caved in when the old timbers were removed and also to widen the drift at this point so that a man could get between the timbers when the train was passing.

On July 23-24-25th work was again resumed in the main heading with caution since during the period of inoperation when the portal was being retimbered approximately 20 tons of vein material had worked loose and was on the drift. The contractors had a great deal of concern about the safety of the back and it was determined that at the end of the drifting in this period that something had to be done to protect the project in the way of timbering. At a point approximately 200' from MP-0' we ran into a very string cross vein that was full of talc and soft and before we could stop this material from running we had drawn out about 50 tons of it and it had caved up and back about 15' from our heading. There was nothing else for us to do but to back timber the ground that had been drilled by the previous contractor and timber all that we had done and so for the rest of the month this work wen on at a two shift basis with the posts being placed at 02" in the clear between them to accomodate a man and the mucking machine and the caps were raised from the 6'4" to 6'-10" and better so that mucking could be accomplished.

At the close of this month we are not able to report on the geological features encounted for we have not mucked out all of the caved ground but we have noticed that there was mineralization in the caved section of about two feet thickness and this seems to be increasing with the strike of the vein.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

April 14, 1953

Memorandum

To: Executive Officer, Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMA 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - Progress report for October 1952

Please find enclosed the original and four copies of the subject progress report--forms MF-104 and MF-104A, with narrative, progress map, and required documentation--and the original and six copies of W. L. Dare's memorandum covering inspection of the underground progress and accounts.

The underground progress, while not confirmed by the narrative, is explained in the inspector's memorandum. The accounts had prior approval from your staff and the claim of $3,534.17 is accordingly approved.

Fifty percent of the amount approved is $1,767.08 and from this sum the Government's equity in equipment of $843.27 should be held and $923.81 paid to the contractor.

You have been advised that U. S. Metals cancelled their subcontract with Silver Bay Mines, Inc., for continuation of the drifting and we understand Lilenquist has negotiated with Henry P. Ehrlinger to take over the subcontract. This will be confirmed on our next San Juan inspection trip.

April 14, 1953

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMA 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - Progress report for October 1952

The Blackhawk mine was visited on November 19, 1952, by R. R. McLellan and W. L. Dare. Underground progress was checked with Walter Bentley, engineer for U. S. Metals Corporation, the independent contractor driving the drift.

As shown on the attached progress map, drift footage is differentiated from crosscut footage at a point where the crosscut first intersects spurs of the vein. On the map this survey point is designated as MP-0' and Bentley has a spad in the back of the drift at this point. The subcontractor had advanced the drift 162 feet when operations were suspended due to heavy snows. At the time of the visit, the drift was advanced a total of 154 feet.

The total estimated cost of the project as set forth in the contract is $21,500.00. Total approved costs through September 1952 amount to $17,965.83. The unexpended balance as of October 1, 1952, is therefore $3,534.17 and is the amount claimed in the October progress report. From the amount of $3,534.17, the operator subtracted his pipe and track costs ($318.62) shown under item (3) and the remainder, $3,215.55, he charges against item (1), Drifting. This contract drifting charge is allowable as the submitted invoices for October show a total of 101 feet of advance at a billed cost of $4,285.00. The operator has shown October's drift footage on form MP-104A as 69.5 feet, with total footage to date as 86.5. Computing October's DMA footage applicable to the charge of $3,215.55, and based on the invoices, the figure of 74.3 feet is obtained. In order to justify the drifting charge on the basis of the maximum cost per foot in the approved subcontract, we will have to accept the 74.3 feet instead of 69.5 feet.

According to the footage charged by the subcontractor, the total to date is 118 feet; 17 feet in September and 101 feet in October. It is known that 5 feet of September's footage was for equivalent slabbing at the point where the crosscut first cut the stringers and, consequently, actual linear advance was 12 feet. Adding the 74.3 feet in October and 12 feet in September, the total linear footage amounts to 86.3, and the units to date of 86.5 on form MF-104A are approved.

In the narrative, the operator mentions 74.3 feet charged to DMEA in October but takes into account the total 17 feet of September when he states that total DMEA footage is 91.3. The approved total of 86.5 is shown on the attached progress map.

Although the request for additional funds is pending approval in Washington, it is recommended that sufficient funds be withheld to cover Government equity in equipment and supplies purchased.

The following equipment and supplies were purchased on a participation basis:

Item	Description	Purchase value, less tax and freight
Mine cars	3 new	$ 604.00
Mine cars	3 used	120.00
Pipe	422.5 feet of 1- and 2-inch	246.41
Rail	842.5 feet of 20-pound	400.31
Vent tube	800 feet of flexipipe, 12-inch, with accessories	899.15
		$2,269.87

Allowing 20 percent depreciation on the six mine cars, 20 percent loss on the original value of vent pipe, and 40 percent nonrecoverable value of the pipe and rail, Government equity will amount to 50 percent of $1,686.55, or $843.27.

Government participation is based on 50 percent of the $3,534.17 claimed minus approximate Government equity in equipment and supplies. Payment is recommended as $923.81.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

LARGE FORMAT DOCUMENTS AT END OF FILE

March 19, 1953

Mr. W. H. King, Chief Engineer
U.S. Bureau of Mines
214 Custom House Bldg.
Denver 2, Colorado

Dear Mr. King:

During the month of October, 1952, an advance of 74.3 ft. was made in the drift on the vein in the Black Hawk Mine under the contract at which time October 28, 1952, a total of 91.3 ft. was reached, the loan funds were exhausted. A total of 51 ft. was timbered, a part of which is in the crosscut through the vein. A further advance of 21.7 ft. to a total of 113 ft. was made at the owner's expense.

An additional advance of 49 ft. was made during November and the fore part of December, to a total of 162 ft. at which point the work was recessed for the winter. During the latter period, an additional 5 ft. was timbered at the owner's expense.

Respectfully submitted,

Walter W. Bentley

To: Executive Officer, Field Team, Region IV

From: Chief, Colorado Branch, Mining Division, Region IV

Subject: DMA Docket 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - Progress report for September 1952

Please find enclosed five copies of the above progress report--forms MF-104 and MF-104A, with required documentation--and seven copies of Russell R. McLellan's memorandum covering inspection of underground progress and accounts.

Progress underground, incorrectly reported in the contractor's narrative but correct on the MF 104A form, is adequately explained in McLellan's memorandum. The accounts are apparently in order according to our interpretation of the contract, amendment, and the subcontract.

Payment is recommended of $2,140.00, or 50 percent of the total $4,280.00 claimed by the contractor, subject to approval of your staff and the audit and accounts section.

October 30, 1952

Memorandum

To: Chief, Colorado Branch, Mining Division, Region IV.

From: R. R. McLellan

Subject: DMA Docket 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - Progress report for September 1952

Underground progress was checked at the Blackhawk mine on September 22, 1952, by R. R. McLellan and W. L. Dare. All work was accomplished as reported on the operator's 104-A form - 17 feet of drifting and 84.5 feet of crosscutting. The narrative report is not clear in explaining the distribution of the footage. In the first paragraph, Lilenquist intended to say that 84.5 feet of crosscutting had been driven during the month for a total of 130.5 feet of crosscutting. In the second paragraph, he intended to say that a total of 5 feet of drifting, 2.5 feet each direction along the vein, is charged to the "enlarging round" drilled to allow drifting in both directions. The additional advance of 12 feet to the northeast along the vein, plus the 5 feet previously described, comprises the total drift footage of 17 feet, The total advance for the month is 84.5 feet plus 17 feet, or 101.5 feet of crosscutting and drifting.

On the day previous to the monthly inspection in September, the operator had exposed a vein in the crosscut. It was not certain at the time if this vein was the Big Indian, for the strike and dip were considerably different than expected. Verbal permission was given the operator to drift on the vein for it appeared that the vein was a spur of the Big Indian and would intersect the Big Indian within 100 feet. At the date of inspection in October, the operator had drifted northwest along the vein 73 feet, but had not encountered a junction. A small amount of lead-zinc ore was noted in the vein near the initial exposure.

The operator appears to be of the opinion that the vein now being followed is the Big Indian although the strike is N. 37° E. instead of almost due west as expected for the Big Indian vein.

The U. S. Metals Corporation, subcontractors, has billed Silver Bay Mines, Inc., $116.00 for labor and $3.95 for lumber, but it has not been charged against the project.

Payment of $2,140.00 is recommended, or 50 percent of the $4,280.00 claimed.

October 24, 1952

Mr. M. M. Traver, Jr., Chief
Colorado Branch
Mining Division, Region IV
Building 20, Room 137
Denver Federal Center
Denver 14, Colorado

Dear Mr. Traver:

The work performed at the Blackhawk tunnel project in September, 1952, consisted of driving a crosscut to and through a vein structure. The advance for this phase for the month was 84½ feet for a total distance of 180½ feet from the point where work commenced this season. Forty-four feet of this section was timbered.

When the hanging wall of the vein was encountered, an enlarging round was drilled to allow a turn in either direction on the vein, and an additional advance of 12 feet made in the northeast drift. You will note that the equivalent of a half round, or 2½ feet, has been allowed for the enlarging for twins, and is not included in the other advance figures, so that in the future the totals reported will be accurate and not include any extra footage for allowances.

Respectfully submitted

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memorandum

To: Executive Officer, Field Team, Region IV

From: Chief, Colorado Branch, Mining Division, Region IV

Subject: DMA 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - July-August 1952 progress report

Please find enclosed five copies of the above progress report--forms MF-104 and MF-104A, with required documentation--and seven copies of Russell R. McLellan's memorandum covering inspection of underground progress and accounts.

The progress report is fully explained in the inspecting engineer's memorandum. Subsequent forms MF-104 (revised) and MF-104A will require adjustments in the cumulative figures.

A letter, copy attached, has been written to Silver Bay Mines, Inc., pointing out necessary corrections which we hope will be made on the September report.

Payment of $2,506.88, or 50 percent of the total $5,013.77 claimed by the contractor, is approved.

Memorandum

To: Chief, Colorado Branch, Mining Division, Region IV

From: Russell R. McLellan

Subject: DMA 487X, Contract I-DMA-E26 (Lead-zinc), Silver Bay Mines, Inc. (Blackhawk mine), San Juan County, Colorado - July-August 1952 progress report

The July-August progress report was received originally on September 16, 1952, but was returned for revision. A revised report was received October 14.

Progress was checked in the field on September 20, 1952. At that time, the U. S. Metals Corporation, as subcontractors, had driven a total of 137.5 feet. They had timbered 36 feet of the crosscut which was required because of a water course area encountered. The water course was discharging a heavy flow of water under high pressure. It blew in behind the miners at the crosscut face and partially caved the workings. It required rail spiling along the east side of the crosscut. It was also necessary to drill holes in the crosscut bottom, insert old drill steel, and place rails between the protruding drill steel and the bottom of the posts to keep the posts from kicking out.

The round blasted on September 19 had exposed a very flat northwesterly dipping vein. The footwall was exposed but the hanging wall was not cut. This vein was striking northeasterly. It is not known if this is the Big Indian vein as that vein has an easterly strike. Except for one narrow streak, there was very little lead-zinc mineralization showing in the vein. Verbal permission was given to install a back switch to the southwest and to drive northeasterly on this vein. If this is not the Big Indian vein, it should intersect that vein in about 100 feet.

The Silver Bay Mines, Inc., has claimed 12 feet of crosscut advance in July and 84 feet in August for a total of 96 feet. Of this total, 24 feet is claimed as timbered. The field inspection confirmed the amounts claimed.

Since the subcontract for driving the crosscut and drifting allows a flat fee per foot of advance plus track, ties, and pipe, several items claimed by the operator on his first MF-104 forms submitted have been deleted from the corrected MF-104 forms. These items still show on the distribution sheet. They amount to $1,142.07 which is nearly $11.00 per foot of advance.

The operator mentions in his transmittal letter that he has not been paid for 50 percent of the October account. However, he was paid this amount along with the September account under date of December 18, 1951.

The Silver Bay Mines, Inc., home offices are in Salt Lake City, Utah; their accounts and invoices are now kept there. Previous to the subcontract work, the operator's books and accounts were inspected at Silverton, Colorado, after they were returned from Salt Lake City where the forms MF-104 were made out.

July-August claims for expenditures are supported by typewritten copies of invoices or billings. There was no actual invoice from the subcontractor, only a typewritten summary signed by Silver Bay Mines, Inc. This has been corrected by obtaining invoices directly from the subcontractor's office in Denver.

Warehouse withdrawals for the project from Silver Bay Mines, Inc., stock are supported by typewritten summary. These items are all chargeable to the project according to terms of the subcontract. An objection was raised to the $0.84 cost for mine ties. The operator has reduced his charge by 50 percent which is more in line with other operators' charges for mine ties.

An invoice copy of stock withdrawal from the subcontractor's warehouse is submitted by the operator. The subcontractor is to furnish all supplies except pipe, track, and ties; therefore, only the pipe used, $32.00, is allowable and can be charged by Silver Bay Mines, Inc.

The invoice copy, certified by the subcontractor's clerk and signed by Silver Bay Mines, Inc., for ventilation tubing is considered to be allowable as pipe, although the subcontract does not specifically itemize ventilation pipe or tubing. Ventilation is necessary in the project work.

Payrolls attached to the MF-104's are for day's pay rehabilitation and preparation prior to drifting and surface plant replacement. These are not allowable under the subcontract.

The MF-104 totals do not include the October 1951 charges which should have been included. Deductions by DMEA audits section are not reflected in the totals. Timber, track, and pipe totals previously reported include past charges to supplies--other, transportation, and equipment repair.

Silver Bay Mines, Inc., has in the past included a monthly listing of vendors and partially detailed breakdown of charges for each month's operation. These can be used to distribute the proper MF-104 charges to the following extent:

Month	Timber	Explosives	Pipe	Track	Compressor Fuel	Other	Transportation
July	-	$155.56	$50.79	$ 44.88	$170.00	$ 205.18	-
August	-	177.39	-	28.60	184.40*	239.48	$150.00
					123.22	280.87	
						56.50	
						15.00	
September	-	369.70	-	80.63	3.73	196.34	49.44
		215.42			198.10	166.98	
						15.00	
October	-	7.75	-	-	141.18	209.42	-
Totals	-	$925.82	$50.79	$154.11	$820.63	$1,384.77	$199.44

*$170.00 deducted as duplicate charge.

The other group includes equipment repair, some pipe, and probably timber (ties) as well as the usual miscellaneous grouping of supplies--other. Proper detailed distribution cannot be made without access to the invoices for each month.

Previous totals should be reduced by the following deductions:

Technical services	-$450.00
Compressor fuel	-$170.00
Equipment purchase	-$80.00

The previous totals should be increased by the October 1951 charges which were not included by the operator in the July-August 1952 report.

This is the first report by the Silver Bay Mines, Inc., using the revised MF-104 and MF-104A forms. The current monthly report for July-August 1952 is in accord with instructions and the totals have been corrected with deletions of nonallowable items.

Payment is approved for $2,506.88, which is 50 percent of the total claimed.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF–104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Administrative Audit Difference Statement

Date: December 18, 1951

Payee's Reference: Progress Report September and October 1951

Silver Bay Mines, Inc.
1370 South 2nd West Street
Salt Lake City, Utah

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount claimed $ 3803.69

Difference $ - 150.00

Amount Approved $ 3653.69

The reason for the difference was due to:

Geologist's salary of $150.00 has been disallowed. Reimbursement made for geologists salary for the months of July and August in the amount of $150.00 has also been deducted inasmuch as no services in this field have been rendered to date.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

Naomi E. Stokes

Memorandum

To: Chief, Colorado Branch, Mining Division

From: Scott W. Hazen, Jr.

Subject: DMA 487X, Contract I-DMA-E26, Silver Bay Mines, Inc., San Juan County, Colorado - October Progress Report

The October progress was actually checked in the field on October 3 and, later, on October 17. Company operations ceased on October 5 for the winter because the miners quit. There were five feet of advance in the crosscut for October and some slabbing on the side to enlarge the crosscut to provide a switch. However, these five feet of advance and the slabbing have not been mucked out and will not be charged by the company as completed work. This work will be completed on company time--not charged to the contract--in the spring of 1952 so that actually there will be a five-foot advance for October without charge against the contract as the company does not intend to claim this advance. The accounts for October include only three invoices for supplies and were verified.

It is recommended that one half of the amount claimed by the company for October--one half of $358.35, or $179.18--be paid.

There is no narrative report attached to the October MF-104 forms but the five days of work are actually covered in the narrative report for September. Both of these sets of forms, September and October, were forwarded to the Colorado Branch office in the latter part of November and this accounts for the delay.

December 10, 1951

Memorandum

To: Chief, Colorado Branch, Mining Division

From: Scott W. Hazen, Jr.

Subject: DMA 487X, Contract I-DMA-E26, Silver Bay Mines, Inc., San Juan County, Colorado - September Progress Report

The September progress for the Silver Bay Mines, Inc., was checked in the field on October 3, 1951. Measurement of advance at that time showed 57 feet, with some of the work being done in the first few days of October. Mr. C. V. Lilenquist, operator, was not at the mine and had left for Salt Lake City. We had discussed the amount of advance the previous night and he said he had reported a little over 50 feet for the month. Mr. Lilenquist forwards all data to the company's Salt Lake City office where the MF-104 forms are made out. They had not been received from Salt Lake City at that time. Since this reported advance checked my measurements, I did not recheck my first measurements. When the MF-104 forms were received in Denver, the forms showed more than 100 feet advance. On a later trip to Silverton, I check-measured and found my figures correct; the operation had closed on October 5 so no more progress was made after my first measurement. Lilenquist was notified and I verified his 52 feet advance reported to Salt Lake. The MF-104 forms were returned and were revised by the company. The invoices were checked and found to be correct as reported. Mr. Lilenquist has attached a certification that the September accounts have been paid.

The small amount of advance--150 feet for the three months--was discussed with Lilenquist. This was attributable to poor management and poor miners. Lilenquist is not a miner. The company recognizes the need of a competent supervisor on the job and better miners. The company was also notified that we will insist on a complete survey of the workings and surface to determine accurately the position of the vein and remaining footage to reach the vein. This is to be done by the company at no extra charge to the contract as the contract provides for $150.00 engineering fee per month. Up to this time the only engineering actually received for this expenditure each month has been the narrative report and making out the MF-104 forms. Mr. Lilenquist agreed that the supervision situation

must be rectified and that they will see that the engineer provides the necessary maps and survey immediately as soon as the weather will permit in the spring of 1952. Approximately $9,500.00 of the $21,500 loan have already been spent and only 150 feet of the total 750 feet of work proposed by the contract have been accomplished.

There is some doubt in my mind that we should continue paying the engineering fee and that possibly we should even go back and withhold the amount already paid until the engineering is brought up to date. This may serve as a leverage over the company to insure proper performance. However, this, I believe, is a decision that should be made by the Region IV personnel. Accordingly, I will recommend that one half of the amount claimed for September be paid to the Silver Bay Mines, Inc. This will amount to one half of $2,945.34, or $1,472.67.

DEFENSE MINERALS ADMINISTRATION

STRATEGIC AND CRITICAL MINERAL EXPLORATION PROGRAM
OPERATOR'S MONTHLY PROGRESS REPORT

Operators are to submit monthly reports to the designated field representative of the Defense Minerals Administration. Reports are to be submitted in quadruplicate prior to the 15th day of the month following the reporting period.

Narrative.—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered is to be furnished.

Maps.—Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

Cost Accounts.—All applicable parts of this form are to be filled in. This report will form the basis for payments of the Government's participating share of expenses. Audits of accounts will be made from time to time.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

Silver Bay Mines, Inc. Exploration Project

San Juan County Colorado.

DMA 487-X Contract I-DMA*E26

NARRATIVE REPORT

During the month ending September 27, 1951, the Blackhawk tunnel of the Silver Bay Mines company was advanced for a total of 52 feet, net advance.

The advance was considered to be fair because of the unusually hard ground encountered. This ground was slow to drill, required a high consumption of bits and a heavy use of powder to get proper breakage.

During the month compressor trouble was again experienced and it was necessary to take the compressor from the mine and bring up a new one. This caused some delay and considerable inconvenience.

At the end of the contract period the ground was beginning to soften slightly and a few gouge seams were noticed.

At one time it was believed that the Big Indian vein was reached because the amount of rhodonite showing in the cross cut. The zone was pentrated, however, without any significant ore showings and the zone of hard rock was reached. It is believed, therefore, that the vein still lies ahead.

A satisfactory rate of advance is now being made since the rock has softened somewhat.

Yours very truly,

Ray Lilenquist

Ray Lilenquist, Pres.

Silver Bay Mines, Inc. Exploration Project.

San Juan County Colorado.

DMA 487-X Contract I-DMA-E26

Maps.

No opportunity was had during the month to prepare a sketch of the workings. However, the advance was comparatively small and no significant structures were cut. Most of the advance was through a hard, silicified latite that was comparatively barren. Before this section was penetrated, some mineralization was encountered and for a while it was believed that the Big Indian structure may have been cut because of the amount of rhodonite in the cross cut. After passing the rhodonite, the rock tightened and remained that way during most of the month. Towards the end of the month a few gouge and talc seams, trending about S. 60 E., were visible and the rock softened somewhat.

Mr. Burbank of the U.S.G.S. was also of the opinion that the cross cut is still in the footwall of the Big Indian vein, although the projected position of the vein has been passed. Because of the length of the projection, however, it would take only a very little flattening of the vein to throw it an additional 70 or 80 feet into the hillside.

At the end of the measuring period the distance was:

Frog point to face -------	279 feet	(9/28/51)
less, distance on 8/28/51 --------	227	
Net advance	52 feet.

Administrative Audit Difference Statement

Date: 9/26/51
Payee's
Reference: Period ending 8/27/51

Silver Bay Mines, Inc.
1370 South 2nd West Street
Salt Lake City, Utah

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount claimed	$ 3,141.96
Difference	$ 250.00
	2,891.96
Amount Approved	$ 400.00
	$3,291.96

The reason for the difference was due to:

Duplicate charge for fuel (reimbursed on July progress report)	$170.00
In order to stay within the limit of mine cars provided for in contract, the purchase price of 2 old cars has been disallowed.	80.00
	$250.00
Cost of 2 new cars disallowed from July report reinstated	+ $400.00

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

W. E. Stokes

STANDARD FORM NO. 64

Office Memorandum • UNITED STATES GOVERNMENT

Building 20, Denver Federal Center

TO : W. M. Traver, Jr. DATE: September 20, 1951

FROM : Scott W. Hazen, Jr.

SUBJECT: DMA-487X, Contract I-DMA-E26, Silver Bay Mines, Inc.

On September 8, Russell McLellan and myself contacted Mr. Lilenquist, at Silverton, Colorado, to check the August progress report for the Silver Bay Mines, Inc. At that time we checked the invoices for expenditures by the company for the month of August and went to the mine and measured the progress. The company reports 41 feet of progress on their crosscut toward the Big Indian vein.

All of the invoices appear to be in order with the exception of an item of fuel for the compressor from the Circle Route Garage. It was evident from examination of this invoice that, in making up the charges for the month in Salt Lake City, Mr. John Kasteler, engineer for the company, had used the total bill from the garage and failed to deduct the $170.00 fuel account charged to the project during July and still carried on the books by the Circle Route Garage as an account payable. Accordingly, the amount of supplies charged to the project and the total amount of expenditure for the month should be reduced by $170.00. The total amount of money is thus reduced to $2,971.96.

Mr. Lilenquist commented at the time of the inspection to the effect that they had received the Government's check for their participation for the month of July 1951, and that this check was $200.00 less than one-half of the total expenditures made by the company for the month of July. There was no letter of explanation for this reduction of the amount of the July expenditure. The reduction was the 50 percent participation of the Government toward the purchase of two new mine cars from the Telluride Iron Works, of Durango, Colorado, which had been ordered by the company and invoiced, but not delivered to the project, during July; therefore, payment for these cars was withheld pending delivery. The cars cost $200.00 each, so the Government's share would have been $200.00, or the amount in question on the July check issued by the Government. During the month of August, the Silver Bay Mines, Inc., purchased one additional new car from the same source at a cost of $204.00. This mine car and two previously ordered were delivered to the project and were in use. The terms of the contract for the project allowed the purchase of six mine cars at an estimated $150.00 each for a total of $900.00. The Silver Bay Mines, Inc., has now purchased five old, used mine cars at $40.00 each, for a total of $200.00, and three new cars at $200.00 each for two plus $204.00 for the third, for a total of $604.00, as charged on the project. This makes a total for July and August of $804.00 charged to the project. The old cars were purchased at the beginning of the project in order to start operations immediately and not have to wait for the six weeks' delivery period on the new cars. At the present time the three new cars are servicing the operations. In order to stay within the allowed number

of cars for the project, it is advisable to now disallow the purchase of two of the old cars which are no longer in service and thus reduce the total cars purchased from eight to six. This would necessitate withholding $40.00 from this month's payment as the Government's portion of the cost of these two old mine cars at $40.00 each. At the same time, the Silver Bay Mines, Inc., should be allowed the $200.00 withheld during July as the Government's share of the participation in the purchase of the two mine cars ordered during that month.

A breakdown of these deductions and additions is given below:

$3,141.96	Total expenditure for August
- 170.00	Invoice - overcharge
$2,971.96	
+ 400.00	Withheld in July
$3,371.96	
- 80.00	Old mine cars
$3,291.96	Adjusted total

$3,291.96 ÷ 1/2 = $1,645.98

Amount due Silver Bay Mines, Inc. - $1,645.98

At the time of the inspection in September it was noted that the Silver Bay Mines, Inc., had not paid some of the bills incurred for the project during the month of July. Mr. Lilenquist, superintendent for the company at Silverton, was advised that it would be best for them to pay up all current bills including the monthly bills for which they were applying for reimbursement. This would mean that they should have their September bills paid when we check the accounts during the first part of October and this was agreed to by Mr. Lilenquist, even though it will require, as he stated, a special assessment against the stockholders in order to pay their accounts up to date.

DMA 487-X Contract I-DMA-E26

NARRATIVE REPORT.

During the month ending August 27, 1951, the Blackhawk tunnel of the Silver Bay mines company was advanced 41 feet roughly at right angles to the Big Indian vein. Although only a small advance was made, the results were encouraging. Numerous quartz veinlets were cut, some carrying small amounts of rhodonite and specks of sulfides. It is believed that the hangwall of the Big Indian vein is being approached and that a more massive vein structure will be encountered at this point.

Considerable delays were experienced during the month, even though only part of the month was worked. Several days were lost when the only Leyner at the property broke down. Some compressor trouble was also experienced.

It is believed that with repairs having been made to the equipment and now that an added mine car was purchased, that better progress will be made hereafter.

Yours very truly,

Ray Lilenquist

Ray Lilenquist, President.

Silver Bay Mines, Inc., Exploration Project.

San Juan County Colorado.

DMA 487-X Contract I-DMA- E26

Maps.

Because of the small amount of advance made thus far, a sketch will be submitted later. During the month the tunnel-crosscut penetrated an altered latite rock that showed numerous quartz seams and veinlets trending roughly parallel to the Big Indian vein.

Specks of rhodonite and sulfides of iron zinc and lead indicate that the the footwall of the Big Indian vein is being approached.

The distance from the frog point to the face was 227 feet, making a net advance of 41 feet.

STRATEGIC AND CRITICAL MINERAL EXPLORATION PROGRAM
OPERATOR'S MONTHLY PROGRESS REPORT

Operators are to submit monthly reports to the designated field representative of the Defense Minerals Administration. Reports are to be submitted in quadruplicate prior to the 15th day of the month following the reporting period.

Narrative.—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered is to be furnished.

Maps.—Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

Cost Accounts.—All applicable parts of this form are to be filled in. This report will form the basis for payments of the Government's participating share of expenses. Audits of accounts will be made from time to time.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

NARRATIVE REPORT

Silver Bay Mines, Incorporated, Exploration Project.

San Juan County Colorado.

DMA 487x - I-DMA-E26

June 29 to July 29, 1952

Operations at the Blackhawk mine of the Silver Bay Mines company commenced in a preliminary way on June 25, 1951. At that time the compressor was moved to the mine and a small amount of cleanup work was done.

Because of compressor trouble, no drilling was done until July 2, 1951. After a few shifts, the company's 210-cubic foot compressor broke down and was sent to Silverton for repairs. A portable 315-cubic foot compressor was rented and work was again resumed.

No cost of preparatory work, or cost of compressor repairs, or added cost of rental of 315-cubic foot compressor was charged to the government exploration project.

After drilling approximately 30 feet, a large zone of white, vuggy quartz carrying some lead and zinc sulfide and flourspar was penetrated. This zone, before drained, carried excessive water under much pressure. For several rounds it was difficlt to load the holes because of this pressure. As a result, progress was very slow through this quartz zone, at one time a halt of several days was called to allow the water to drain and the pressure to subside.

Upon resumption of work, another delay was encountered when the fan from the compressor motor broke and punctured the radiator. A 500-cubic foot compressor was then rented and brought to the mine. After one week's work, this compressor developed a knock and it was found that all the high pressure compressor valves were either stuck or broken. A trip was made to Salt Lake for these parts and at the end of the work month this machine was being repaired.

As a result, only 14 contract shfts were executed for a net advance of 56 feet. The last 20 feet of advance, including a 6-foot-wide zone of white quartz, is very encouraging, however, and indicates that a major structure is being crossed. This zone is roughly parallel to the Big Indian structure and may be a part of it. Although the amount of leadand zinc sulfides is small it may be that a more barren part of the zone is being crossed. As soon as the hanging wall is penetrated more information will be available.

John Kasteler

John Kasteler, Engineer.

MAPS

Silver Bay Mines, Incorporated, Exploration Project.

San Juan County Colorado.

DMA 487 X - I-DMA-E 26.

Because of compressor trouble there remains in the face of the Blackhawk tunnel a 7-foot round that is piled up over a distance of 25 feet, thus obscuring most of the geologic and mineralogic features of the last part of the total advance.

It is considered advisable to wait until this cleaned up before a sketch is made of the drift.

On the map submitted to the DMA, the face was 130 feet from the frog point (which was the measuring station and is located at the junction of the Blackhawk tunnel with the Intermediate southeast drift).

On July 27, the distance from the frog point to the face was 186 feet.
