Cement Worksheet Notes

Data Sources

The sources of data for the cement worksheet are the mineral statistics publications of the U.S. Bureau of Mines (USBM) and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

Production

Production data report the sum of portland, natural, masonry, and slag or pozzolanic cement (all hydraulic cement) as published in the MYB and the MR. Beginning in 1922, the term masonry cement was introduced as a category of hydraulic cement consisting of natural and pozzolanic cements as well as masonry cement to prevent the reporting of proprietary data.

Imports

Import data prior to 1950 are assumed to include clinker. Original footnotes indicate a change in USBM reporting methods for imports, beginning in 1954. Data do not allow calculation of clinker imports prior to 1950. Import data for hydraulic cement were from the published values in the MYB and the MR.

Exports

Export data include hydraulic cement and clinker. Data were from the MYB and the MR.

Stocks

Yearend stocks of cement at mills and terminals were from the MYB and the MR. Stocks data were not available from 1900–10.

Apparent Consumption

Apparent consumption of hydraulic cement was from the MYB and the MR.

Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of cement apparent consumption in current dollars. For 1900–44, unit value is estimated from the weighted-average production values of pozzolanic cement, natural cement, and portland cement. From 1945 to the most recent year, the reported bulk value at the mill is used to estimate unit value. The reported bulk value at the mill is a weighted-average value of all forms of portland cement and masonry cement. All values and prices were from the MYB and the MR.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production of hydraulic cement was from the MYB and the MR. World production statistics were not available from 1900–25.
