No. 1

AMENDMENT OF CONTRACT: No. Idm-E706

Contract Docket No. DMEA 3390, dated September 13, 1954, between the United States of America and San Juan Uranium Corporation is hereby amended as follows, effective as of the date of the Contract:

> Referring to "Article 3. Exploration project." of Exploration Project Contract form MF-200(A) (February 1952), following the words "and shall bring the project to completion within a period of" delete "six (6) months" and in lieu thereof substitute "one (1) year".

This amendment shall not be construed to increase the estimated total cost of the project, the amount of the Government's contribution, or any item of allowable cost which is expressly designated "allowable maximum".

Dated APR 5 1955

Re: Docket DMEA 3390 (Uranium)
Contract Idm-E706

Dear Mr. Traver:

This letter acknowledges receipt of your letter of March 17, 1955 relative to the completion clause in our Contract Idm-E706, which states that the project was to be brought to completion within a six months period or by March 13, 1954.

Answering your inquiry as to whether or not we are desirous of maintaining the contract in force, please be advised that we are and do hereby request that it be kept in force for an additional six months from March 13, 1955.

Thanking you for your co-operation and advice I remain,

Sincerely yours,

SAN JUAN URANIUM CORPORATION

UNITED STATES OF AMERICA
DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

EXPLORATION PROJECT CONTRACT[1]
(Short Form)

IT IS AGREED this 13th day of September, 1954, between the United States of America, acting through the Department of the Interior, Defense Minerals Exploration Administration, hereinafter called the "Government," and[2] San Juan Uranium Corporation - Incorporated in Delaware
Fidelity Building
Oklahoma City
Oklahoma

hereinafter called the "Operator," as follows:

ARTICLE 1. *Authority for contract.*—This agreement is entered into under the authority of the Defense Production Act of 1950, as amended, pursuant to DMEA Order 1 entitled "Government Aid in Defense Exploration Projects."

ARTICLE 2. *Operator's property rights.*—With respect to that certain land situated in the State of Colorado, County of La Plata, described as follows:[3] Unpatented lode mining claims as shown on Annex II attached which are recorded in the official records of said County.

the Operator represents and undertakes:[4]

(*a*) ~~That the Operator is the owner, in possession and entitled to possession, and that the property is subject only to the following encumbrances, liens, and encumbrances of record: [illegible]~~

None

(*b*) That the Operator is a lessee, in possession and entitled to possession, and the Owner's Consent to Lien is attached.

The Operator shall devote the land and all existing improvements, facilities, buildings, installations, and appurtenances to the purposes of the exploration project without any allowance for the use, rental value, depreciation, depletion, or other cost of acquiring, owning, or holding possession thereof.

ARTICLE 3. *Exploration project.*—The Operator, within sixty (60) days from the date of this contract shall commence work on a project of exploration for[5] Uranium

in or upon the described land; and shall bring the project to completion within a period of six (6) months from the date of this contract. The work to be performed is more fully described in Exhibit "A" attached hereto, which, with any maps or drawings thereto attached, are made a part of this contract. The Government will contribute to the cost of this work as hereafter provided. The work shall be performed by the Operator or by independent contractor or contractors efficiently, expertly, in a workmanlike manner, in accordance with good mining standards and State regulations for health and safety and for workmen's compensation and employers' liability insurance, with suitable and adequate equipment, materials, and labor, to bring the project to completion within the time fixed. The Government shall have the right to enter and observe and inspect the work at all reasonable times, and the Operator shall provide the Government with all available means for doing so. The Government may consult with and advise the Operator on all phases of the work.

ARTICLE 4. *Costs of the project.*—The agreed, estimated costs of performing the work, expressed in terms of units of work to be performed (per foot of drifting, per foot of drilling, per cubic yard of material to be moved, etc.) are set forth in Exhibit "A," attached hereto. The Government will pay seventy-five (75) percent of these agreed, estimated costs, as they accrue, for units of work actually performed that conform with the description or specifications for the work set forth in this contract, in an aggregate total amount not in excess of $7,875.00, which is 75 percent of $10,500.00, the agreed, estimated total cost of the project in which the Government will participate: *Provided,* That until the Operator's final report and final accounting have been rendered to the Government and any final check or auditing required by the Government has been made, and a final settlement of the contract has been made, the Government may withhold from the last voucher or vouchers such sums as it sees fit not in excess of ten (10) percent of the maximum total which the Government might have been called upon to pay under the terms of the contract. The Government may, as it sees fit, make payments direct to the Operator's independent contractors, if any, for the account of the Operator, rather than to the Operator.

ARTICLE 5. *Reports, accounts, audits.*—(*a*) *Progress reports.* The Operator shall provide the Government with monthly reports of units of work performed under the contract, in quintuplicate (five copies), upon forms provided by the Government. These progress reports shall be certified by the Operator, and shall constitute both the Operator's invoice of units of work performed on the project during the period covered by the report and his voucher for repayment by the Government, unless the Government requires the use of a standard voucher form with invoice attached. Progress reports shall include surface and/or underground engineering-geological maps or sketches showing the progress of the exploration, with assay-reports on samples taken concurrently with the advance in mineralized ground.

[1] If sufficient space is not provided in any blank, use an extra sheet of paper and refer to it in the blank.
[2] State name, address, and nature of organization if any.
[3] Give legal description or enough to identify the property, particularly excluding any land or interest therein to which the Government's lien is not to attach or the production from which is not to be subject to the Government's percentage royalty.
[4] Strike out the provision not applicable.
[5] Name of mineral or minerals.

(*b*) *Final report.*—Upon completion of the exploration work or termination of the contract the Operator shall provide the Government with an adequate geological and engineering report, in quintuplicate (five copies), including an estimate of ore reserves resulting from the exploration work.

(*c*) *Compliance with requirements.*—If, in the opinion of the Government, any of the Operator's reports are insufficient or incomplete, the Government may procure the making or completion of such reports and attachments as an expense of the exploration work; and the Government may withhold approval and payment of any vouchers depending upon insufficient or incomplete reports.

(*d*) *Accounts and audits.*—The Operator shall keep suitable records and accounts of the units of work performed, which the Government may inspect and audit at any time. The Government may at any time require a check of the work performed and an audit of the Operator's records and accounts, by a certified public accountant or otherwise, the cost thereof to be treated as a cost of the project. The Operator shall keep and preserve said records and accounts for at least 3 years after the completion of the project or the termination of this contract. Upon the completion of the project or termination of the contract the Operator shall render a final account and statement of work performed to accompany his final report.

~~ARTICLE 6. *Repayment by Operator.* (*a*) If, at any time, the Government considers that a discovery or a development from which production may be made has resulted from the exploration work, the Government, at any time not later than 6 months after the Operator has rendered the required final report and final account, may so certify in writing to the Operator. The certification shall describe broadly or indicate the nature of the discovery or development. In the event of such certification, any minerals mined or produced from the land described in Article 2 within 10 years from the date of this contract, including any mined or produced before the certification, shall be subject to a percentage royalty which the Operator or his successor in interest shall pay to the Government, upon the net smelter returns, the net concentrator returns, or other net amounts realized from the sale or other disposition of any such production, in whatever form disposed of, including ore, concentrates, or metal, until the total amount contributed by the Government, without interest, is fully repaid, or said 10 years have elapsed, whichever occurs first, as follows:~~

~~(1) One and one-half (1½) percent of any such net amounts not in excess of eight dollars ($8.00) per ton.~~

~~(2) One and one-half (1½) percent of any such net amounts, plus one-half (½) percent of such net amounts for each additional full fifty cents ($0.50) by which such net amounts exceed eight dollars ($8.00) per ton, but not in excess of five (5) percent of such net amounts.~~

~~(For instance: The percentage royalty on a net amount of five dollars ($5.00) per ton, would be one and one-half (1½) percent; on a net amount of ten dollars ($10.00) per ton, three and one-half (3½) percent.)~~

~~(*b*) As here used, "net smelter returns," "net concentrator returns," and "other net amounts realized from the sale or other disposition," mean gross revenue from sales, or if not sold, the market value of the material after it is mined in the form in which and the place where it is held. In the case of integrated operations in which the material is not disposed of as such, these terms mean what is or would be the gross income from mining operations for percentage depletion purposes in income-tax determination.~~

~~(*c*) To secure the payment of its percentage royalty, the Government shall have and is hereby granted a lien upon the land described in Article 2 and upon any production of minerals therefrom, until the royalty claim is extinguished by lapse of time or is fully paid.~~

~~(*d*) This article is not to be construed as imposing any obligation on the Operator or the Operator's successor in interest to engage in any mining or production operations.~~ See Annex I substituted for this article.

ARTICLE 7. *Assignment, transfer, or loss of Operator's interest.*—Without the written consent of the Government, the Operator shall not assign or otherwise transfer or hypothecate this contract or any rights thereunder. The Operator shall not make any voluntary nor permit any involuntary transfer or conveyance of the Operator's rights in the land described in Article 2, without making suitable provision for the preservation of the Government's right to a percentage royalty on production and lien for the payment thereof; *Provided,* that mere failure by the Operator to maintain the Operator's rights in the land, without any consideration running to the Operator other than relief from the cost of maintaining such rights (as by surrender of a leasehold, failure to perform assessment work, or failure to exercise an option), coupled with complete abandonment by the Operator of all interest in or operations on the land for a period of 10 years from the date of this contract, shall not constitute such a transfer or conveyance. Should the Operator make or permit any transfer or conveyance in violation of this provision, the Operator shall be and remain liable for payment to the Government of the same amounts, at the same times, as would have been paid under the terms of the percentage royalty on production. If for any reason the net smelter returns, net concentrator returns, or other net amounts realized from the sale or other disposition of such production are not available as a means of measuring the amount of the Operator's liability, the amount thereof shall be estimated as well as may be, and in the event of dispute as to such estimates, the determination thereof by the Administrator of Defense Minerals Exploration Administration or by his successor shall be final and binding upon the Operator.

ARTICLE 8. *Termination and completion.*—The Government may, at any time, by written notice to the Operator, terminate this contract: (*a*) If the Operator fails to provide his share of the money necessary to prosecute operations pursuant to the terms of the contract; (*b*) if the Operator, in the opinion of the Government, fails to prosecute operations pursuant to the terms of the contract; or (*c*) if, in the opinion of the Government, operations up to the time of the notice have not indicated the probability of making any worth while discovery and in the opinion of the Government further operations are not justified.

ARTICLE 9. *Changes and added provisions* Portions of the second sentence of Article 7 beginning with the word "Provided" is deleted.

Executed in sextuplicate the day and year first above written.

PRESIDENT

I, P. RAY SCHWOERKE, certify that I am the secretary of the corporation named as Operator herein; that R. B. WALTER, who signed this contract on behalf of the Operator, was then PRESIDENT of said corporation; that said contract was duly signed for and in behalf of said corporation by authority of its governing body, and is within the scope of its corporate powers.

P. Ray Schwoerke [CORPORATE SEAL]

U. S. GOVERNMENT PRINTING OFFICE 16—66329-1

SEP 20 1954

ANNEX I

The following provisions are in lieu of Article 6 :

Repayment by Operator.--a. Certification.--If the Government considers that a discovery or development from which production may be made has resulted from the work, the Government, at any time not later than six months after the Operator has rendered the final report and final account, may so certify in writing to the Operator. Such certification shall describe broadly or indicate the nature of the discovery or development.

b. Royalty on production.--The Operator, as principal, if the Operator is the producer, or as surety, if the Operator is not the producer, shall pay to the Government a royalty on all minerals mined or produced from the land, as follows: (1) regardless of any certification of discovery or development, from the date of the contract until the lapse of the time within which the Government may make such certification, or until the total net amount contributed by the Government without interest is fully repaid, whichever occurs first; or (2) if the Government makes a certification of discovery or development, for a period of ten years from the date of the contract, or until the total net amount contributed by the Government without interest is fully repaid, whichever occurs first.

c. Basis for computation.--The Government's royalty shall be a percentage of the gross proceeds (including any bonuses, premiums, allowances, or other benefits) from the production sold, in the form sold (ore, concentrates, metal, or equivalent), at the point of delivery (the f.o.b. point); except, that charges of the buyer arising in the regular course of business, and shown as deductions on the buyer's settlement sheets, on account of the cost of treatment processes performed by the buyer, sampling and assaying to determine the value of the production sold, and freight paid by the buyer to a carrier (not the Operator), shall be allowed as deductions in arriving at the "gross proceeds" as that term is used herein. Any costs of treatment processes, sampling or assaying, or transportation, performed or paid by the

Operator or by anyone other than the buyer, are not deductible in arriving at the "gross proceeds" as that term is here used. The term "treatment processes," as here used, means those processes (such as milling, concentrating, smelting, refining, or equivalent) applied to the raw ore or other production after it is extracted from the ground, to put it into a commercially marketable form; excluding fabricating or manufacturing.

d. Unsold production.--If any production (ore, concentrates, metal, or equivalent), after the lapse of six months from the date the ore was extracted from the ground, remains neither sold nor used by the Operator in integrated manufacturing or fabricating operations (for instance, if it is stockpiled), the Government, at its option, as long as it so remains, may require the computation and payment of its royalty on the value of such production in the form (ore, concentrates, metal, or equivalent) it is in when the Government elects to require computation and payment. If any production is used by the Operator in integrated manufacturing or fabricating operations before the Government makes its election, the Government's royalty on such production shall be computed on the value thereof in the form in which and at the time when it is so used. "Value" as here used means what is or would be gross income from mining operations for percentage depletion purposes in Federal income tax determination, or the market value, whichever is greater.

e. Percentages of royalty.--The percentages of the Government's royalty shall be as follows:

> One and one-half ($1\frac{1}{2}$) percent of amounts ("gross proceeds" or "value") not in excess of eight dollars ($8.00) per ton of production in the form in which sold, held, or used, plus one-half ($\frac{1}{2}$) percent for each additional full fifty cents ($0.50) by which such amounts exceed eight dollars ($8.00) per ton, but not in excess of five (5) percent of such amounts.
>
> (For instance: the royalty on an amount of five dollars ($5.00) per ton, would be one and one-half ($1\frac{1}{2}$) percent; on an amount of ten dollars ($10.00) per ton, three and one-half ($3\frac{1}{2}$) percent.)

f. Lien for payment.--To secure the payment of its percentage royalty, there is hereby granted to the Government a lien upon the land or the Operator's interest in the land and upon any production of minerals therefrom, until the royalty claim is extinguished by lapse of time or is fully paid.

g. Notice to purchasers.--The Operator shall give notice of the Government's claim for royalty to any purchaser of the production, and shall authorize and direct such purchaser to pay the royalty directly to the Government and to furnish the Government with copies of the settlement sheets. If the records of any production and sales or other disposition of production, whether the production is by the Operator or by others, are not made available to the Government, the amount of the royalty may be estimated by the Administrator, Defense Minerals Exploration Administration, or his successor, and his estimate thereof shall be final and binding upon the Operator.

h. No obligation to produce.--Nothing in this contract is to be construed as imposing any obligation on the Operator or the Operator's successor in interest to engage in any mining or production operations.

i. Government not obligated to buy.--Nothing in this contract shall be construed as imposing any obligation on the Government to purchase any minerals mined or produced from the land.

DOCKET DMRA-3390

EXHIBIT "A"

Description of the Work

Extend the Minoletti adit 350 feet westerly beyond the present face, along the mineralized zone at the top of the Entrada sandstone. The work is shown in Figures 2 and 3 which are attached and made a part of EXHIBIT "A".

A channel cut sample will be taken across the width of mineralization at 5-foot intervals of advance from the starting point under the contract. As assay map showing the location and width of samples, assay values of U_3O_8 and V_2O_5 will be kept currently up to date as the work progresses and submitted monthly with each Form MF-104 Operator's Monthly Progress Report and Voucher.

Estimated Cost of the Project

Drifting 350 feet at $30.00 per foot.....	$10,500.00
Government Participation at 75%.....	7,875.00

The above estimated costs include sampling, assaying, mapping and any and all costs incurred in the completion of the work.

OWNER'S CONSENT TO LIEN

SEP 20 1954

WHEREAS, the undersigned, as owner, co-owner, lessor, or seller has an interest in certain property in the State of _____, County of _____, described as follows:1/

_____

_____

_____

_____

which is the subject of a proposed exploration project contract, hereinafter called the "contract", between the United States of America, hereinafter called the "Government", and

2/ _____

_____

_____

hereinafter called the "Operator"; and

WHEREAS, under the provisions of said contract the Government is entitled to a percentage royalty on production and to other rights and equities which do or may conflict with or be adverse to the rights of the undersigned:

NOW THEREFORE, the undersigned, in consideration of said contract and as an inducement to the Government to enter into same, undertakes and agrees as follows:

1. The Government's equity in and right to dismantle, sever, take possession of, and remove and dispose of facilities, buildings, fixtures, equipment, or other items as provided in the contract or any amendment thereof shall prevail over and be prior and superior to any conflicting or adverse rights of the undersigned, and the Government is authorized to enter upon the land for such purposes.

2. To secure the payment to the Government of the percentage royalty on production3/ provided for under the terms of said exploration project contract or any amendment thereof there is hereby granted to the Government a lien upon the land above referred to and upon any production of minerals therefrom until said royalty is fully paid or ten years have elapsed from the date of the contract, whichever occurs first.

1/ Either (a) insert the legal description of the land, or (b) strike out the words "as follows" and insert "in a lease [or contract, deed, or other document] dated _____, and recorded in book _____ page _____ official records of said county." If (b) is used, the book and page of recordation cannot be dispensed with. If the space provided is insufficient, use an Annex, and refer to the Annex in the space.

2/ Insert the name of the Operator as it will appear in the exploration project contract.

3/ Mining or production from the land is not required, and in the absence of production there is no obligation to repay the Government.

(OVER)

3. The undersigned shall commit no act nor assert any claim that may contravene or conflict with the lien, claim, or rights of the Government under the provisions of said contract. This agreement shall be binding upon the heirs, executors, administrators, successors, and assigns of the undersigned.

Gentlemen:

Further to Ernest Wm. Ellis' letter of October 10, 1956, to you, we are enclosing six copies of a letter, with attachment, addressed to the owners of the subject property who signed an undated Owner's Consent to Lien form.

Since you represent these owners and their addresses are not available to us, it would be appreciated if you would forward a copy of the letter to each couple indicated. The sixth copy is for your files.

Sincerely yours,

C. O. Mittendorf

Goodhope Claims
La Plata County, Colorado

Dear Mr. Walter:

Reference is made to your completed exploration contract with the Government.

We sincerely regret that the work performed did not result in a certification of discovery or development under the provisions of the contract. In the absence of such certification, the Government retains no claim or lien against the property subject to the contract or any future production therefrom. We, therefore, are closing our books and records on this project. Your attention, however, is called to the provisions of the contract which require the operator to keep and preserve certain records for the period indicated.

Your interest in the DMEA exploration program and participation therein are fully appreciated.

Sincerely yours,

C. O. Mittendorf (for)

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
San Juan Uranium Corporation
Goodhope Claims
La Plata County, Colorado

Dear Sirs and Mesdames:

Reference is made to the undated Owner's Consent to Lien which you executed in connection with the DMEA contract for an exploration project on your property located in La Plata County, Colorado.

For your information, there is enclosed a copy of our letter of this date to Mr. R. B. Walter, President, San Juan Uranium Corporation, 3003 N. W. 20th Street, Oklahoma City 7, Oklahoma, advising that the Government retains no claim or lien against the property described in the contract or on any future production therefrom.

Sincerely yours,

C. O. Mittendorf (for)

Administrator

Project Summary Report

By: Michael Ching

1. Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706

Operator: San Juan Uranium Corporation, a Delaware corporation
Fidelity Building
Oklahoma City, Oklahoma

Property: 17 unpatented lode mining claims, Goodhope Nos. 1-2, 4-5, and 7-19, located in an unsurveyed area in T. 36 N., R. 10 E., N.M.P.M., La Plata County, Colorado

Operator's Property Rights:

Operaor is a lessee. Owner's Consent to Lien (undated) executed by F. W. Pinkerton, ElsieA. Pinkerton, C. E. Linn, NellieM. Linn,Fred Brown (Attorney-in-fact for Lloyd Zentz and Edna Zentz), A. S. Butell, Catharine E. Butell, F. W. Pinkerton, Jr., and Carol M. Pinkerton.

2. Contract (Short Form), dated September 13, 1954

Contract completion date, as amended, September 13, 1955.

Work Authorized -

Extend the Minoletti adit 350 feet westerly beyond the present face, along the mineralized zone at the top of the Entrada sandstone.

Estimated Cost:

350 feet drifting @ $30.00/ft.	$10,500.00
Government participation @ 75%	$ 7,875.00

Amendments -

No. 1 - Extends completion period from 6 months to 1 year.

Work completed -

The project work was started November 30, 1954, and completed in July, 1955. There was considerable delay because of

severe winter weather and equipment breakdowns. Drifting began at the face of the existing adit, 180 feet from the portal, and was advanced 352 feet in a southwesterly and westerly direction. Samples were taken at 5-foot intervals. The unit cost of $30.00 per foot included all costs. Only the authorized 350 feet were allowed.

350 ft. drifting @ $30.00/ft.	$10,500.00
Government participation @ 75%	$ 7,875.00

3. Auditor's Report of Review, dated October 22, 1956

Total cost as billed by Operator		$10,500.00
Exceptions	None	-
Total accepted cost		$10,500.00
Government participation @ 75%		$ 7,875.00

4. Certification of Discovery - None

5. Comments and Results:

Drifting progress was slower than anticipated, averaging less than 50 feet per month.

The uranium-vanadium deposits of the area are in the upper part of the Entrada sandstone, from 1 to 4 feet below the contact with the overlying Pony Express limestone member of the Wanakah formation. They occur as irregularly spaced rolls, lenses and pods, which range from a few inches to 4 feet thick and from 1 to 15 feet long. Average thickness is about 8 inches. The largest deposit encountered in the adit was about 2 feet thick and extended for about 15 feet along the adit walls, but the material was not of ore grade. Elsewhere in the adit the ore horizon contained only narrow stringers or small thin pods of mineralized material. Mineralization consists mostly of vanadium, with minor amounts of uranium. Of 70 samples taken by the Operator at 5-foot intervals along the drift, only two assayed 0.20% U_3O_8 or better. One was taken over a width of .75 feet and the other was a grab sample. A good portion of the samples were grab samples, the assays of which ranged from a trace to 0.18% U_3O_8. Channel samples taken across mineralized sections ranged in width from 0.7 to 5 feet and the assays were usually of the order of 0.01 and 0.02% U_3O_8. Five channel samples taken by the field examiners along the adit ranged from 0.5 to 2.0 feet in width, and only one was of ore grade (0.20% U_3O_8 and 2.21% V_2O_5).

It is concluded that the deposits exposed by this exploration project are too small and too low grade to be of significance. A certification of discovery is not warranted. There is no geologic reason to assume that a

further extension of the adit would expose ore bodies of greater significance.

A request by the Operator for more funds and work on this and other nearby claims was denied on July 3, 1956.

From: DMEA Field Team, Region III

Subject: Docket No. DMEA 3390 (Uranium), Contract No. Idm-E706, San Juan Uranium Corporation (Good Hope claim), La Plata County, Colorado - FINAL REPORT

Enclosed are the original and three copies of a joint final engineering and geologic report, dated November, 1956, by C. M. Harrer, Mining Engineer, Bureau of Mines, and E. N. Harshman, Geologist, Geological Survey, pertaining to the work completed under the subject contract, and transmittal thereof, dated November 26, 1956, from John F. Shaw and E. N. Harshman.

The original and one copy of the Operator's final report were forwarded to you by memorandum of October 10, 1956.

Final payment to the Operator was processed by this office October 23, 1956, in conformance with the Report of Review of reported project costs by the Contract Administration and Audit Division, dated October 22, 1956.

The exploration work completed consisted of 350 feet of drifting, at a total accepted cost of $10,500.00, toward which the Government contributed 75%, or an amount of $7,875.00.

The exploration work performed did not result in the discovery or velopment of a significant quantity of uranium ore. Therefore, Certification the project as such is not recommended.

Subject: DMEA 3390 (Uranium) Contract Idm-E706, San Juan Uranium Corporation, (Good Hope claims) La Plata County, Colorado - Final Report

Enclosed are the original and 9 copies of the final engineering and geologic report on the subject project by C. M. Harrer, mining engineer, and E. N. Harshman, geologist.

The Good Hope group of claims was explored with Government assistance during the period November 1, 1954 - July 1955. The contract called for doing 350 feet of drifting. This was completed, and 70 samples taken by the operator along the drift indicated that no significant ore bodies had been found. An additional 16 samples taken by DMEA personnel confirmed this.

The cost of the project was $10,500.00, the Government's part at 75 percent was $7,875.00.

The operator made two requests for additional assistance in the amounts of $400,000.00 and $71,568.00.

The examining team recommended that these requests be denied and that no Certificate of Discovery be issued.

DMEA 3390
GOOD HOPE GROUP OF CLAIMS
SAN JUAN URANIUM CORPORATION
LA PLATA COUNTY, COLORADO

INTRODUCTION AND SUMMARY

On December 17, 1954, exploration contract Idm-E706 was activated between San Juan Uranium Corporation and the Defense Minerals Exploration Administration to explore the Good Hope group of claims for uranium.

The claims are standard 600 feet by 1500 feet unpatented locations along Lightner Creek, in the San Juan National Forest, T. 36 N., R. 10 E., New Mexico principal meridian, La Plata County, Colorado.

The object of this project was to explore the Good Hope No. 1 and No. 2 claims for roscoelite-type uranium-vanadium deposits by extending the existing Minoletti adit 350 feet westerly. The contract called for an expenditure of $10,500.00 with Government participation of 75 percent.

Exploration under the contract started on November 1, 1954, and the 350 feet of drift allowed under the contract was completed in July 1955. The operator also sampled the drift at 5-foot intervals and submitted the vanadium and uranium analyses for 70 samples.

Total cost of exploration is $10,500.00, and Government participation of 75 percent is $7,875.00.

Two requests for additional exploration assistance in the amounts of $400,000.00 and $71,568.00 were recommended for denial.

Exploration under DMEA has exposed sandstone containing definite but small and sporadic occurrences of vanadium with only very minor amounts of uranium. The deposit cannot be considered as a significant source of uranium ore.

No further exploration with DMEA participation is recommended, and no Certification of Discovery is recommended.

LOCATION OF THE PROPERTY

The Good Hope group of claims, Nos. 1, 2, 4, 5 and 7 to 19 are in an unsurveyed area of the San Juan National Forest, T. 36 N., R. 10 E., New Mexico principal meridian, La Plata County, Colorado (figs. 1 and 2). The claims are along the south fork of Lightner Creek at altitudes ranging from 8,000 to 9,000 feet. The property is reached from Durango, Colorado, by driving 3 miles west over U. S. Highway 160, thence 6 miles north over a dirt county road, thence 3 miles northwest over a rough access road to the southeast corner of the claims. The terrain is rugged, with steep, forested slopes. The nearest purchasing and processing facilities for uranium ore are at Durango, 12 miles southeast of the property.

OWNERSHIP AND EXTENT

The Good Hope group of unpatented, standard lode locations (fig. 2) are owned by A. S. and Catherine E. Butell, F. W. and Elsie A. Pinkerton, C. E. and Nellie M. Linn and Lloyd and Carol M. Zentz. The property was leased to W. M. and Dottie Smallwood on March 9, 1954. Mr. Smallwood assigned his lease to San Juan Uranium Corporation on March 17, 1954. The property includes 19 claims, each of which are 600 feet wide and 1500 feet long. They are recorded in the Office of the La Plata County Clerk and Recorder as follows:

Claim	Certificate Number	Date	Book	Page
Good Hope 1	171,018	Sept. 12, 1942	217	570
2	19	"	"	571
4	21	"	"	573
5	22	"	"	574
7	24	"	246	2
8	25	"	"	3
9	26	"	"	4

15	9	"	"	10
16	10	"	"	11
17	11	"	"	12
18	12	"	"	13
19	13	"	"	14
amended 5	171,341	Sept. 13, 1944	"	42
" 5	234,737	Sept. 16, 1953	"	293

The claims are subordinated under the contract.

Mr. A. S. Butell was contacted at Durango on May 9, 1956, and stated that the lease to the Good Hope claims was terminated as of May 5, 1956, because San Juan Uranium Corporation failed to carry out its terms of the lease. The owners are now trying to interest others in its further development. The claims comprise about 352 acres.

HISTORY AND PRODUCTION

The operator claims that about 1,000 tons of vanadium ore, averaging 2.85 percent V_2O_5 was produced from the property during World War II. At that time no payment was made for uranium, and no records are available to establish the uranium content of the ore.

The property was examined by a Geological Survey and Bureau of Mines team on June 16, 1954, for the Defense Minerals Exploration Administration and a contract Idm-E706 was activated on Dec. 17, 1954.

On Dec. 17, 1954, San Juan Uranium Corporation requested that the

contract be amended to provide for a much larger program. The operator proposed to drive three 5- by 7-foot adits on the Good Hope No. 3, Good Hope No. 9 and Nevada No. 4 claims for a total length of 2,172 feet, starting from rimrock locations. In addition, it proposed to core drill 14,975 feet of holes 60 to 600 feet deep. Total cost of this additional program was estimated at about $400,000.00. The property was again examined for DMEA on July 19, 1955, and the operator's request was denied.

On May 26, 1955, San Juan Uranium Corporation again requested consideration of additional exploration assistance in the amount of $71,568.00, to extend the Minoletti adit 300 feet, and to drive three 500-foot adits from rimrock locations to explore the Good Hope No. 3, Nevada No. 3 and Atom No. 3 claims. The property was examined again on May 9, 1956. At this time the property had been repossessed by the owners through default on the part of San Juan Uranium Corp. This request was also recommended for denial. In the last two requests the Good Hope No. 3, Nevada Nos. 3 and 4, and Atom No. 3 claims were subordinated under the proposed amendments.

GEOLOGY AND ORE DEPOSITS

The geology and ore deposits of the La Plata Mountains are described by Edwin B. Eckel (1949) in the U. S. Geological Survey Professional Paper 219. The following summary of the regional geologic setting is taken largely from that publication.

The La Plata Mountains are composed of sedimentary rocks, ranging in age from Pennsylvanian to Cretaceous, and sills, stocks, and dikes of porphyritic and non-porphyritic igneous rocks of late Cretaceous or early Tertiary age.

The major structural feature is a domal uplift of the sedimentary rocks. The dome is about 15 miles in diameter and is partly bounded by a horseshoe-shaped hinge fold, open toward the south and encircling the central part of the mountains. Major and minor faults have broken the sediments, particularly along the hinge line and along the north and northeast edge of the dome. The maximum uplift of the sediments is about 6,000 feet. Eckel concludes that doming was caused in part by intrusion of the many sills now exposed in the area and in part by folding in the basement rocks.

The Goodhope group of claims is in an area of gently-dipping sedimentary rocks on the southern flank of the La Plata Mountains. Erosion has exposed a thick section of sandstone, limestone, mudstone, and shale. Progressively from the bottom upward the formations are: the Delores formations of Triassic age, consisting of 400 to 500 feet of red shale and mudstones; the Entrada sandstone of upper Jurassic age 80 to 100 feet thick; the Wanakah formation of upper Jurassic age, consisting of 20 to 25 feet of limestone (Pony Express member) overlain by 100 to 125 feet of sandstone and marl; and the Junction Creek sandstones of upper Jurassic age, 200 to 300 feet thick.

No major faults or folds were recognized in the immediate vicinity of the claims. Minor faults, shear zones and folds are seen in the cliff face along Lightner Creek and in the DMEA adit. They did not complicate exploration of the deposit.

The vanadium-uranium deposits of the Lightner Creek area are in the upper part of the Entrada sandstone, from 1 to 4 feet below the contact with the overlying Pony Express limestone member of the Wanakah formation. This limestone may correlate with the Todilto limestone present in the Grants

uranium district to the south. The formations strike about N. 80° E. and dip 10° to 20° south.

The mineralized zone appears to be continuous over a wide area southwest of the south fork of Lightner Creek. It can be traced without interruption along at least 400 feet of cliff face near the workings shown on figure 2, in road cuts extending more than 2,000 feet northwest from these workings, and in the DMEA Minoletti adit. The location of samples are shown on figures 2 and 3. The results of assaying are tabulated in Annex I.

Exploration and limited mining operations have shown the mineralized material to be in a tabular zone ranging from a few inches to 4 feet in thickness. The "ore" is classed as a roscoelite and corvusite type, high in vanadium and low in uranium.

Mineralized material occurs in irregularly spaced rolls, lenses, and pods, generally flattened on the bottom, and pitching southwesterly. Individual pods are connected by mineralized seams or bands, in some places not over a quarter of an inch thick but always present. The lower contact between the mineralized material and sandstone is rather sharp, and in some places is marked by a thin clay seam; the upper contact is gradational. The factors governing the position, size and grade of individual mineralized pods are not readily apparent but the position of some of the pods may be governed by crossbedding and minor faulting in the Entrada sandstone.

Individual pods, lenses, or rolls range from a few inches to 4 feet thick and from 1 to 10 feet long. The average thickness is estimated to be about 8 inches.

Work under the DMEA contract started at a point 180 feet from the portal of the Minoletti tunnel. Minor faulting somewhat disturbed the ore horizon for the first 100 feet of adit driven under the contract;

the remaining 252 feet of adit was driven in somewhat fractured but relatively undisturbed sandstone. The ore-bearing horizon exposed in the underground workings contains fewer and smaller pods of mineralized material than did the old workings on the cliff face. The largest pod of mineralized material was encountered in the adit at a point about 150 feet from the starting point. Here a small pod, about 2 feet in thickness is exposed for about 15 feet along the adit walls. The material is not ore grade. Elsewhere in the adit the ore horizon contains only narrow stringers or small thin pods of mineralized material.

Although the operator contends that additional drifting to the southwest would certainly discover material of ore grade and thickness, there is no geologic reason to assume that mineralized sandstone greatly different from that exposed in the present adit would be encountered.

ORE RESERVES

Although very selective mining at certain points in the Minoletti adit might result in the production of a few tons of ore-grade material the average grade of the material in the mineralized zone as shown in Annex I is far below ore grade.

No estimate of ore reserves is possible due to the erratic distribution of uranium and vanadium in narrow streaks and small, discontinuous pods.

THE PROJECT

Description of work completed:

Defense Minerals Exploration Administration contract Idm-E706 was signed on December 17, 1954, and work under the contract started November 30, 1954. At this time the Minoletti adit (figs. 2 and 3) from which

exploration was to start, had been driven 180 feet southwesterly.

Work under the contract consisted of advancing the Minoletti adit southwesterly and westerly 352 feet. This is 2 feet in excess of contract stipulations. Work under the contract was completed in July 1955. The Minoletti adit is now 532 feet long. The advance of the Minoletti adit was sampled at 5 foot intervals. The resulting 70 samples (fig. 3) were analyzed for their uranium and vanadium content, and the results are tabulated as Annex I. The results of 16 samples taken by DMEA are also included.

Cost of the project:

The authorized and accepted costs of the project are summarized below. The summary also includes the units of work.

Summary of Costs and Project Work

Work authorized by contract				Work Completed	
Type of Work	Units	Unit Cost	Total Cost	Units	Approved Cost
Drifting	350 feet	$30.00 per foot	$10,500.00	352 ft.	$10,500.00
Sampling & assaying	sample every 5 ft.	Included in drifting cost	Included in drifting cost	70 samples	Included in drifting cost

The Government withholds $250.00 from the operator pending resolution of all matters relative to the closing of the project account.

Project equipment:

The fixed unit price stipulated in the contract includes all costs for equipment and supplies necessary to complete exploration satisfactorily, and reflects any salvage value. The Government is therefore not concerned with the disposition of any property upon termination of the contract.

Efficiency of operations:

Advance under the contract ranges from 26to 56 feet of drift per month. Considerable delay occurred because of severe winter weather and equipment breakdowns. The work was performed slower than expected.

CONCLUSIONS AND RECOMMENDATIONS

The material exposed by the DMEA work on the Good Hope group of claims contains appreciable amounts of vanadium but only minor amounts of uranium. The deposit cannot be considered as a significant source of uranium ore.

Extension of the Minoletti adit 350 feet under DMEA has resulted in the exposure of small, lenticular bodies of very low grade vanadium-uranium ore with occassional small streaks of higher-grade material.

No significant discovery of uranium has been made and therefore no Certification of Discovery is recommended.

No further exploration with DMEA assistance is recommended.

Memorandum

To: Chairman, Operating Committee, DMEA

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 3390 (Uranium), Contract No. Idm-E706, San Juan Uranium Corporation (Good Hope claims et al.), La Plata County, Colorado.

Enclosed are the original and one copy of a final report submitted by the Operator pertaining to work completed under the subject contract.

The Operator did not supply a map to show the work completed. However, under the circumstances, the report is deemed acceptable, as the engineering and geologic report by Government personnel will contain the maps that are necessary to indicate the work performed.

Advance information indicates that Certification of the project as a discovery or development resulting from the DMEA exploration work performed will not be recommended.

EXPLORATION PROJECT CONTRACT

Article 5 (b) Final Report

The goodhope group of claims, leased by "San Juan Uranium Corporation", located near Durango, Colorado, upon which the subject "Exploration Project" was carried forward with the contract being completed during July, 1955, lie in the mountainous terrain of the La Plata mountains. The outcropping formations are of sedimentary origin, with the values of both Uranium and Vanadium being found in the upper section of the Entrada sandstone. These formations were found to dip approximately 15 degrees to the South into the San Juan Basin.

Prior to the time this group of claims was taken over by San Juan Uranium Corporation, a 180' tunnel had been driven in on Goodhope No. 1, evidently following the mineralized section as the Todilto limestone was exposed in the roof through out it's entire length. This tunnel penetrated a faulted section at approximately 165 feet in from it's mouth as it was exposed in the last 15 feet.

At the time the DMEA loan was applied for the Corporation planned on starting a new tunnel rather than carry the 180 foot tunnel forward because of it's having penetrated a faulted section of the formation. However at the suggestion of the DMEA field party that inspected our claims, we agreed to abandon the idae of a new tunnel and carry the old one forward. However since this 180 foot tunnel had encountered a faulted section, we were convinced that the true vein or ore body, which the previous operators had followed for the first 165 feet, would not be found until the faulted section had been completely cut through. We believe the field Engineer for the DMEA was convinced of that too.

The tunnel was carried forward the 350 feet as set out in our contract, but was in the faulted section the entire time and still in it when stopped. This faulted section varied in mineral content at times, though as a whole assays of samples taken showed but traces, with the exception of the last few. Since these last samples, showed an increase of mineral content of both Uranium and Vanadium we felt the tunnel should have been carried forward at least another 100 feet, as we believe the true vein or ore body will be found when the faulted section is once penetrated.

No commercial ore was encountered in extending the 180 foot tunnel so no ore reserves were blocked out.

Gentlemen:

Reference is made to your letter of October 5, 1956, regarding the possibility of cancelling out the Owner's Consent to Lien signed by various owners of the subject property.

It is our policy to consider an Owner's Consent to Lien as being in full force and effect until an exploration project is closed on our books and records. In this case such closing is dependent upon our final analysis of the results of the project. Such analysis is pending our receipt of all final engineering and geological reports.

We regret that there has been some delay in the preparation of these reports. We shall be pleased to communicate with you as soon as our books and records on this project have been closed.

Sincerely yours,

Ernest Wm. Ellis, Chief

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
San Juan Uranium Corporation
Good Hope Group
La Plata County, Colorado

Attention: Ernest Wm. Ellis, Chief
Rare and Miscellaneous
Metals Division

Dear Mr. Ellis:

This letter is written on behalf of Mr. A. S. Butell and others, the owners of certain Uranium Mining Claims located in La Plata County Colorado, which formerly were leased to the San Juan Corporation to which corporation a DMEA Loan was made for exploratory work on the Good Hope and other claims.

Please be advised that the Lease as held by San Juan Uranium Corporation has been cancelled out by the owners for failure to comply with the terms of those leases and the San Juan Uranium Corporation now has no further interest in those claims. Thus, this letter is written to ascertain if the Owner's Consent to Lien pursuant to that indebtedness of the San Juan Uranium Corporation could be cancelled out.

We feel that under the circumstances it would be just and proper that any contingent liability of the owners should be cancelled due to the fact San Juan Uranium Corporation did not live up to its provisions in the leases and all of those leases have been cancelled. May I please hear from you in this matter?

Sincerely yours,

McKELVEY & McKELVEY

Re: Docket DMEA 3390 (Uranium)
Contract Idm-E706
San Juan Uranium Corporation
(Goodhope Claims, et al.)
La Plata County, Colorado.

Dear Mr. Traver:

Replying to your letter of August 20, 1956, can only say that I am indeed very sorry, that the final engineering and geologic report pertaining to the work completed under Contract Idm-E706, has not been forwarded.

The writer has been out of the city for quite some time and since all such work and reports have always been left for me to do, this report was not made out.

I do not have your letter of the 13th of July so am wondering whether I am supposed to have a report blank to fill out and if not what information is required that I have not already forwarded with my past monthly reports?

As soon as I know what is required I shall be only too glad to make up the report and send it in.

Please observe the change of address as given: R. B. Walter, 3003 - N. W. 20th., Oklahoma City 7, Oklahoma.

Very truly yours,

/s/ R. B. Walter

San Juan Uranium Corporation
Good Hope claims, et al.
La Plata County, Colorado

Dear Mr. Walter:

Reference is made to the Washington Office letter, dated July 3, 1956, advising you that your application for additional exploration assistance is denied.

Inasmuch as Government approval for additional work will not be forthcoming and as all previously approved work has been completed, your attention is called to the provision of Article 5 (b) of the contract form relative to the rendering by your company of an adequate final engineering and geologic report covering all work performed under the contract.

Final payment involving the amount withheld from your July, 1955 voucher will be processed after receipt of the above final report and release to this office of a Report of Review of contract expenditures by the Contract Administration and Audit Division, DMEA. We are desirous of closing the account at an early date, therefore, you are requested to give this matter your immediate attention.

Very truly yours,

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
Goodhope Claims, et al.
La Plata County, Colorado

Dear Mr. Walter:

Your application, dated May 26, 1955, for additional work and funds under the subject exploration contract, and other information available to us in Washington concerning the captioned property have been reviewed.

Projects approved by the Defense Minerals Exploration Administration must, in its judgment, show definite promise of yielding materials of acceptable grade in quantities that will significantly improve the mineral supply position for the National Defense Program.

Careful study of all our information indicates to us that the probability of disclosing significant ore reserves is not sufficiently promising to justify Government participation. We regret to advise you, under these circumstances, that your application for additional exploration assistance is denied.

We wish to thank you for your interest in the Defense Minerals Program and for bringing the proposed work to our attention.

Sincerely yours,

G. Q. Mittendorf

June 30, 1956

Summary of Proposed Project

Object: Denial of application for additional funds and work.

Docket No.: DMEA-3390 (Contract No. Idm-E706)

Commodity: Uranium

Applicant: San Juan Uranium Corporation
Fidelity Building
Oklahoma City, Oklahoma

Property: 56 claims; Goodhope Nos. 1-19, Nevada Nos. 1-9, Atom Nos. 1-9, Bald Mountain Nos. 1-10, Lady Maurine Nos. 1-3, Hope No. 1, Hope No. 2, Silver Mountain No. 1, Silver Mountain No. 2, Good Hope Millsite and Lost Canyon No. 1, La Plata County, Colorado. Area is unsurveyed. Applicant is the Lessee.

Date of Application: First Supplement of December 17, 1954, superseded by Second Supplement of May 26, 1955.

Amount of Application: First Supplement for $400,000.00, superseded by Second Supplement for $71,568.00.

Work Proposed: Second Supplement - Extend the adit previously driven under this contract an additional 300 feet. Drive 3 new adits, one each on the Nevada No. 3, Good Hope No. 3 and Atom No. 3 claims. Each adit to be approximately 500 feet long. Cost: 1800 ft. drifting @ $39.76/ft. - $71,568.00

Field Team Report: August 12, 1955 - J. E. O'Rourke, USGS, and C. M. Harrer, USBM

Uraniferous deposits of the "roscoelite" type occur discontinuously along several thousand feet of rim rock exposure in this area. The mineralized zone is found at a poorly defined stratigraphic horizen in the Entrada formation from 1 to 2 feet below the base of the Pony Express limestone member of the Wanakah formation. The thickness of the zone was found not to exceed 3 feet and probably averages about 8 inches. The longest

continuously mineralized body observed was 95 feet long and 8 to 12 inches thick on the Goodhope No. 4 claim. Assay results of samples taken by the Applicant at 5-foot intervals along 290 feet of the Minoletti adit, driven under the subject contract, showed that the mineralized zoned contains little uranium. There is no known geologic reason to assume that any deposits found in the areas to be explored under the expanded program requested will differ appreciably in grade or thickness from that found in the Minoletti adit. A composite sample from old workings at some of the proposed adit sites contained 0.045% U_3O_8 and 0.99% V_2O_5. It is recommended that the Applicant's request for additional exploration assistance be denied.

(Supplement to Field Team report)

Supplemental Report of Examination - June 5, 1956, C. M. Harrer, USBM, and D. R. Maclaren, USGS.

This report applies mostly to the Atom group of claims which were not previously ready for inspection.

Small, weak concentrations of uranium-vanadium of the "roscoelite" type occur discontinuously in the rim rock exposure on the Atom No. 3 claim. The outcrop and proposed adit site have been stripped for about 270 feet and a weakly radioactive zone has been exposed for 100 feet. The mineralized zone is very spotty and limited to a greenish sandstone 2 to 3 feet thick just below the Pony Express limestone. Sample H-842, taken over a 2-foot width of the most radioactive part of the outcrop, assayed 0.01% U_3O_8 and 2.16% V_2O_5. Sample H-843, a composite of the best appearing material, assayed 0.01% U_3O_8 and 1.71% V_2O_5.

The radioactive zoneoccurs in the same stratigraphic horizon as the several thousand feet of rim exposure on the Good Hope and Nevada groups of claims and the mineralization is also very similar. There is no apparent geologic reason to assume that the deposit will differ appreciably in grade or thickness from other exposures examined on the Good Hope and Nevada claims and in the Minoletti adit driven under the subject contract. For these reasons, it is recommended that the application for further exploration be denied.

One of the owners of the property leased by the Applicant advised the examiners that the lease held by the Applicant was cancelled on May 5, 1956, for failure to carry out its terms.

Commodity Committee Members' Comments:

Geological Survey - N. E. Nelson, September 1, 1955.

Drifting completed under the contract revealed little ore. A continuously mineralized body 95 feet long and 8-12 inches thick wasexposed. Of 55 samples taken at 5-foot intervals along the drift, 6 assyed above 0.10% U_3O_8. However, the examiners state that the work has shown that the zone contains little uranium. The evidence submitted does not justify the new program outlined by theApplicant. Concurs with the denial recommendations of the Field Team.

Supplemental comments, dated June 13, 1956, resulting from supplemental Report of Examination, dated June 5, 1956:

Concurs with the conclusions and recommendation for denial of the Field Team.

Bureau of Mines - John E. Crawford - September 16, 1955, and June 28, 1956.

Discussed original and supplemental reports of examination with the representative of the AEC. Concurs with the Field Team that the results of sampling and work done under the exploration contract, do not warrant the requested additional work and that the application should be denied.

Rare and Miscellaneous Metals Division - Michael Ching, September 12, 1955, and June 29, 1956.

The examin~~ations~~ers' first report on the request for additional funds applies to the Applicant's first supplemental request of December 17, 1954, which was for the amount of $400,000.00. However, this request was modified by a second supplemental request, dated May 26, 1955, which was for only $71,568.00. The examiners' supplemental report covers the second request and their conclusions in both instances were that rim exposures, together with the work completed under the contract in the Minoletti adit, has shown that the mineralized zone contains little uranium and that there is no known geologic reason to assume that the proposed additional work will expose higher grade deposits.

Conclusions and Recommendations:

The work completed under the subject contract has indicated the limited possibilities of this property. It is recommended that the application for additional exploration work be denied.

June 28, 1956

Memorandum

To: Ernest William Ellis, DMEA Member
Uranium Commodity Committee

From: John E. Crawford, Bureau of Mines Member
Uranium Commodity Committee

Subject: Joint Supplemental Report of Examination, DMEA Docket 3390 (Uranium) San Juan Uranium Corporation, LaPlata County, Colorado

I have reviewed the joint supplemental report of examination, DMEA Docket 3390, San Juan Uranium Corporation, LaPlata County, Colorado, dated June 5 and received in this office June 11, 1956. I have also discussed it with Joseph O. Hosted, Washington representative of the Atomic Energy Commission.

We concur that there is little reason to believe that the deposit exposed on the Atom No. 3 claim will be of any greater significance than the exposures on the Good Hope claims, which have been explored under DMEA contract. The application for additional funds should be denied.

Re: DMEA 3390 Idm-E706
San Juan Uranium Corp.
Atom Claim
La Plata Co., Colo.
$71,568.00 - Uranium

Memorandum

To: E. W. Ellis, Defense Minerals Exploration Administration

From: N. E. Nelson, U. S. Geological Survey

Subject: Review of Field Team report on application for an amendment.

Following the completion of a contract for 350 feet of drifting in the Minoletti adit in the course of which little mineralization of significance was found, the applicant applied for an extension involving roughly $400,000 worth of work. Before the application was acted upon another one was submitted requesting assistance on a $71,568.00 project in a place not covered by the examination prompted by the application for assistance on the $400,000 project.

The subject Field Team report covers the new area, the Atom claim, on which the applicant proposed to drive a 500 foot adit, to explore a thin weakly radioactive zone opened by bulldozer for 270 feet. The examiners found no reason for thinking the results would be better than those obtained on the Good Hope claim in the Minoletti adit driven under the original DMEA contract. Also it was learned that the lease of the San Juan Uranium Corp. was cancelled May 5, 1956. Therefore the corporation may no longer be interested in the application. At any rate the examiners and the Field Team recommend denial of the application for an amendment.

I concur with that recommendation.

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
San Juan Uranium Corporation
Good Hope Group
La Plata County, Colorado

Dear Mr. Butell:

Reference is made to your letter of June 3, 1956, addressed to our Denver office, regarding possible indebtedness to the DMEA by the owners of the subject claims.

The San Juan Uranium Corporation has before us a request for additional exploratory work on the Good Hope and other nearby claim groups. Pending a decision on this request we have been holding the subject contract open. We expect to make such decision in the very near future.

San Juan Uranium Corporation has not advised this office that its lease on the Good Hope claims has been cancelled. Regardless of this, until such time that the subject project is closed on our books and records, we must consider the Owner's Consent to Lien signed by you and other owners as being in full force and effect. However, we shall advise you promptly when such closing takes place.

Sincerely yours,

Ernest Wm. Ellis, Chief
Rare and Miscellaneous
Metals Division

Memorandum

To: Secretary to the Operating Committee, DMEA

From: Field Team, Region III

Subject: Joint Supplemental Report of Examination, Docket DMEA 3390 (Uranium) Contract Idm-E706, San Juan Uranium Corporation, LaPlata County, Colorado

Enclosed are the original and three copies of a joint geologic and engineering report on the supplemental examination of the Atom group of claims. The Applicant Corporation requested additional funds in the amount of $71,568.00.

The field examiners found no apparent geologic reason to assume that the deposit exposed on the Atom No. 3 claim, will differ appreciably in grade or thickness from the exposures on the Good Hope claims which have been the subject of DMEA exploration. They recommend that the application for additional funds be denied. We concur in this recommendation.

Mr. A. S. Butell, one of the owners of the property, stated that the San Juan Uranium Corporation's Lease was cancelled on May 5, 1956 for failure to carry out the terms of the contract.

Memorandum

To: Executive Officer, DMEA Field Team, Region III
Through: E. N. Harshman E. N. Harshman
J. F. Shaw JFS

From: C. M. Harrer
D. R. MacLaren

Subject: DMEA Docket 3390 (Uranium), Contract Idm-E706, San Juan Uranium Corporation, La Plata County, Colorado - Joint geologic and engineering report on a supplemental examination of the Atom group of claims

On May 26, 1955, San Juan Uranium Corporation requested additional funds in the amount of $71,568.00 to drive 1,800 feet of adit as follows:

(a) Advance the Minoletti adit on the Good Hope No. 2 claim an additional 300 feet.

(b) Explore the outcrop near the south side line of the Good Hope No. 3 claim with 500 feet of adit.

(c) Explore the outcrop near the north side line of the Nevada No. 3 claim with 500 feet of adit.

(d) Explore the outcrop near the center of the Atom No. 3 claim with 500 feet of adit.

Further exploration on the Good Hope and Nevada groups of claims was recommended for denial in a joint geologic and engineering report dated August 12, 1955.

The Atom group of claims was examined on May 9, 1956, in the company of A. S. Butell, part owner of the property.

Small and weak concentrations of uranium-vanadium of the "roscoelite" type occur discontinuously in the rim rock exposure on the Atom No. 3 claim. San Juan Uranium Corporation proposed to explore the most promising part of the outcrop with 500 feet of adit. The portal of this proposed adit is 71 feet southwest of the discovery post on the Atom No. 3 claim. The outcrop and proposed adit site (fig. 1) have been stripped for about 270 feet, and a weakly radioactive zone has been exposed for 100 feet. The radioactive, mineralized zone is very spotty and limited to a greenish sandstone, 2 to 3 feet thick, just below the Pony Express limestone of Upper Jurassic age. Sample H-842 was taken over a 2-foot width of the most radioactive part of the outcrop at the proposed adit site and assayed 0.012 percent U_3O_8 and 2.16 percent V_2O_5. Sample H-843, which is a composite of the best appearing uranium-vanadium, assayed 0.010 percent U_3O_8 and 1.71 percent V_2O_5. With a background of 0.01 MR/hr, the highest readings on an Eberline Geiger counter model E112 was 4 to 10 times background.

The rim rock exposure of radioactive greenish sandstone on the Atom No. 3 claim in the Deep Creek area is in the same stratigraphic horizon as the several thousands of feet of rim exposure on the Good Hope and Nevada groups of claims in the adjacent Lightner Creek area, and its uranium and vanadium content is also very similar. There is no apparent geologic reason to assume that the deposit exposed

on the Atom No. 3 claim (fig. 1) which the applicant proposes to explore under the expanded program will differ appreciably in grade or thickness from the other exposures examined on the ten Good Hope claims; the Nevada claims 3, 4, and 5; and the Minoletti adit driven under DMEA contract. For these reasons it is recommended that further exploration as outlined in the applicant's request for DMEA exploration assistance, dated May 26, 1955, be denied.

Mr. A. S. Butell of 1932 Glenisle, Durango, Colorado, who is part owner of all the property leased by San Juan Uranium Corporation states that the San Juan Uranium Corporation's lease was cancelled on May 5, 1956, for failure to carry out the terms of the contract. Mr. Butell is presently negotiating with other parties to purchase or carry on exploration of the property.

In consequence, San Juan Uranium Corporation's application for additional DMEA exploration assistance on the subject property appears to be void.

Dear Sir,

Am writing in regard to the assistance from the D.M.E.A. to the San Juan Uranium Corporation of Oklahoma City, on the Good Hope Property situated on Lightner Creek in La Plata County, Colorado.

It is our understanding that the assistance was cancelled out for reasons of insufficient showings of ore. We presume that this clears the owners of any indebtedness to the D.M.E.A. since the San Juan Uranium Corporation are no longer connected with the property. Please advice.

Thanking you for a prompt reply, I remain,

Yours truly,

A S Butell Owner.

$4,350.00 - Mica

Memorandum

To: L. G. Houk, Defense Minerals Exploration Administration

From: N. E. Nelson, U. S. Geological Survey

Subject: Review of Final Field Team report.

The contract approved the expenditure of $4,350.00 on reconditioning a shallow shaft, sinking and drifting.

The work ended with the reconditioning and sinking 20 feet, the cost allowed being $737.00.

More than 2,000 pounds of mica was produced and sales amounted to $203.80 on which royalty of $10.19 was collected.

The examiners and Field Team recommended certification and termination of the contract.

I concur with the recommendation.

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
San Juan Uranium Corp.
Good Hope Group
La Plata County, Colorado

Dear Mr. Harshman:

This is with respect to the Operator's request for additional work and funds under the subject contract.

A Report of Examination, dated August 12, 1955, recommended denial of the Operator's request of December 17, 1954, which was for a program estimated to cost $400,000.00. An amended request, dated May 26, 1955, for a program estimated to cost $71,568.00, was not entirely covered by the aforementioned Report of Examination; consequently, the Field Team has made several attempts to arrange a further examination of the property with the Operator.

A review of the Operator's amended request and of the examiners' report indicates that the report is applicable to all claims on which work is proposed, except the Atom claims. The Operator has given no justification, geological or otherwise, for the proposed work on the Atom claims.

We have had no word from your office since Mr. Traver's letter of October 3 to the Operator, requesting advice as to when a field examination could be made. Kindly advise us regarding the present status of this project.

Memorandum

To: Ernest William Ellis, DMEA Member
Uranium Commodity Committee, Room 4445

From: John E. Crawford, Bureau of Mines Member
Uranium Commodity Committee

Subject: Report of examination, DMEA Docket 3390, Contract Idm-E706, San Juan Uranium Corporation, Good Hope Group, La Plata County, Colorado

I have reviewed the Field Team report of examination, San Juan Uranium Corporation, DMEA Docket 3390; and I have discussed it with Joseph O. Hosted, Washington representative of the Atomic Energy Commission.

The applicant has requested extensive exploration project comprising 2,172 feet of drifting and 14,975 feet of core drilling at an estimated total cost of $400,000.00.

The field examiners conclude that the subject property is geologically unfavorable for the discovery of any appreciable amounts of uranium. Results of composite samples taken from old workings at the proposed new adit sites do not warrant this expensive exploration program.

We concur in the recommendation that the request made on December 17, 1954, by the applicant for additional DMEA assistance be denied.

The report is being forwarded to the Chief, Division of Minerals, in accordance with the routing slip attached thereto.

Subject: Docket DMEA 3390, Contract Idm-E706, (Uranium), San Juan Uranium Corporation, La Plata County, Colorado

This has reference to our teletype this date on the subject docket.

Enclosed is a copy of a letter from the Operator which is essentially correct as to the two Amendments he submitted.

The Operator forwarded four copies of his proposed Amendment requesting additional funds totaling $71,568.00. This request was dated May 26, 1955 and we forwarded three copies to you June 2, 1955 retaining one copy in our file.

Your review of the application for additional funds was forwarded this office June 23, 1955. Through an error in this office, this Operator's prior application for $400,000.00 was sent to the field for an examination. The joint report of that field examination recommending denial was transmitted to you August 17, 1955.

We are now sending our only copy of the Operator's request for $71,568.00 to the field for their recommendations. Four copies of their report will be forwarded you as soon as available.

Re: IDM-E706 Docket DME A 3390
Application for Additional Funds

Dear Mr Shaw:

This is a rather belated reply to your letter of August 1, 1955 relative to our (San Juan Uranium Corporation) application for additional funds under Idm-E706 docket DMEA 3390.

The fact that we have made out and forwarded two separate amendments to our contract Idm-E706, one dated December 17, 1954 and the second dated May 26, 1955, is undoubtedly the cause of what we might call a misunderstanding, as additional mining leases are included in the latter or amendment No. 2.

Filing our amendment No. 1 to contract Idm-E706 was premature on our part. After further consideration we decided we would be interested in securing a loan for driving tunnels only. It was then that we decided to file a second amendment to contract Idm-E706, which was dated May 26, 1955, and was in the amount of $71,568.00. This amendment (Amendment No. 2) listed the mining claims envolved as:

Goodhope Nos. 1 to 19 inclusive
Nevada Nos. 1 to 9 inclusive
Hope Nos. 1 and 2
Lady Maurine Nos. 1, 2 and 3
Silver Mountain Nos. 1 and 2
Lost Canyon No. 1,

all located on Main and South Lightner Creeks, and:

Atom Nos. 1 to 9 inclusive,

on Deep Creek, and all located in LaPlata County, Colorado.

In our Amendment No. 2 the proposed exploratory work consists of the driving of three (3) 5' X 7' new tunnels, one to be located on Nevada No.3, one on Goodhope No. 3 and one on Atom No. 3, and continue driving of the original tunnel located on Goodhope No. 2.

On July 19, 1955 your field examiners completed checking the tunnel on Goodhope No. 2 under contract Idm-706, then made a partial examination of the additional claims. I understood our Mr Hoffman, Mine Superintendent to say that your field examiners advised him that they would not have time to complete their examination that day so would return. It was at that time that I called Mr H. M. Connors to suggest that the field examiners not return until we advised that the road to the Atom Claims was completed and an opening made, and also a site chosen for the tunnel on Goodhope No. 3.

CHAIRMAN, OPEAXX OPERATING COMMITTEE, DMEA

RE DOCKET DMEA 3390, CONTRACT E-706, SAN JUAN URANIUM CORP. PLEASE HOLD IN ABEYANCE ADVICE TO OPERATOR ON HIS REQUEST FOR ADDITIONAL FUNDS IF POSSIBLE. LETTER OF EXPLANATIONFOLLOWS.

W M TRAVER

Denver

SAN JUAN URANIUM CORPORATION

FIDELITY BUILDING

OKLAHOMA CITY, OKLAHOMA

Under date of July 29, 1955 I received a letter from Mr Traver referring to my long distance telephone conversation with Mr H. M. Connors and advising us that the examination of our property had been completed July 19, 1955. It was upon receipt of this letter that I was sure that there was a possible mix-up in the Amendments, even thou Mr Traver did refer to the sum of money set out in our Amendment No.2. However, since our road to the Atom Claims was not completed and we had not definitely chosen a tunnel site on Goodhope No. 3, I thought it just as well to let the matter rest until such time as this work on our part was finished. Due to adverse weather conditions we have not been able to make as good progress on building the road over the mountain as we had hoped we would, so suggest that any additional examination of our property that will be necessary be postponed until such time we advise your office that our work has been carried forward to a point where the sites for both the Atom and Goodhope No. 3 tunnels are readily accessible.

In closing allow me to say that we are very sorry indeed that we filed Amendment No. 1 to contract Idm-E706. We were ill advised at that time. We are only interested in securing assistance in carrying the tunnels forward.

Your early comments will be greatly appreciated.

Very truly yours

R. B. Walter

Re: DMEA-3390, Idm-E706
San Juan Uranium Corp.
Good Hope Group
La Plata Co., Colorado
$10,500.00 - Uranium

Memorandum

To: E. W. Ellis, Defense Minerals Exploration Administration

From: N. E. Nelson, U. S. Geological Survey

Subject: Review of report on request for additional funds for expanded program.

Under Contract Idm-E706 the applicant did work which was completed in July 1955. The drifting revealed little ore. The applicant now wants to greatly extend the program, the new work to consist of 2,172 feet of drifting and 14,975 feet of core drilling. The estimated cost is approximately $400,000.

The uraniferous deposits of the "roscoelite" type occur in the Entrada formation. The Minoletti adit work, under E706, exposed a continuously mineralized body 95 feet long and 8 to 12 inches thick along most of its length on the Good Hope No. 4 claim. Of 55 samples taken at 5-foot intervals, by the operator, from 0-290 feet in the Minoletti adit, 8 assayed above 0.08% U_3O_8, and 6 above 0.10%;

Location	Feet sampled	% V_2O_5	% U_3O_8
Plus 5'	0.75	0.00	0.20
" 20'	0.75	0.62	0.13
" 170'	10.0	1.60	0.10
" 205'	Not given	1.84	0.18
" 210'	" "	1.94	0.16
" 245'	" "	2.86	0.15

The "Feet sampled" figures mean little as given, but the assays could warrant "repeats". However the examiners say " . . . work completed in the Minoletti adit has shown that the zone contains little uranium." Certainly the evidence submitted does not justify the new work program outlined by the applicant.

I concur with the denial recommendation of the Field Team.

From: J. E. O'Rourke and C. M. Harrer

Subject: DMEA Docket 3390 (Uranium), Contract Idm-E706, San Juan Uranium Corporation (Good Hope group), La Plata County, Colorado - Joint geologic and engineering report on request for additional funds for an expanded exploration program

On September 13, 1954, San Juan Uranium Corporation of Oklahoma City, Oklahoma, entered into an exploration contract with the Defense Minerals Exploration Administration for 350 feet of drifting at a total cost of $10,500.00.

On December 17, 1954, the subject company requested a greatly expanded addition to the above exploration program to further explore their property.

The property was examined for the Defense Minerals Exploration Administration on July 19, 1955, by a joint team consisting of members of the Geological Survey and Bureau of Mines. Ernest Hofman, foreman, was contacted on the property.

The Goodhope and Nevada groups of claims are located in an unsurveyed area in the San Juan National Forest in T. 36 N., R's 9 and 10 E., La Plata County, Colorado, figure 1.

The original contract was completed during July 1955. San Juan Uranium Corporation now propose to drive three 5 x 7-foot adits on their Goodhope No. 3, Goodhope No. 9, and Nevada No. 4 claims. Each adit would be about 724 feet long for a total of 2,172 feet. In addition, they propose 14,975 feet of core drilling at two general locations. Holes would be 60 to 600 feet deep. Their presentation of costs is very

Reviewed by
DMEA OPERATING COMMITTEE

confusing and in excess of requirements to complete the job. Total cost of the project is estimated at approximately $400,000.00.

Claims No. 3, 4, and 5 of the Nevada group were examined and a map (fig. 2) made of the mine workings. The area between the Minoletti adit, on the Goodhope No. 2 claim and the Goodhope No. 10 claim was also studied. The Goodhope No. 3 claim had been examined during a previous examination by D. R. MacLaren.

Uraniferous deposits of the "roscoelite" type occur discontinuously along several thousand feet of rim rock exposure in these areas. The mineralized zone is found at an indefinitely defined stratigraphic horizon in the Entrada formation from 1 to 2 feet below the base of the Pony Express limestone member of the Wanakah formation. The thickness of the zone was not seen to exceed 3 feet, and probably averages about 8 inches. The longest continuously exposed mineralized body observed is located on the Goodhope No. 4 claim. It is 95 feet long and 8 to 12 inches thick along most of its length.

Assay results of samples taken by the applicant at 5-foot intervals along the first 290 feet of the 350-foot extension of the Minoletti adit (driven under Contract Idm-E701) follow:

Location	Feet sampled	% V_2O_5	% U_3O_8

290		0.09	0.01
342 (U.S.Bureau of Mines sample)		2.20	0.036

In spite of the fact that four of the seven samples taken during the initial examination of the property indicated a significant uranium content in the mineralized zone, work completed in the Minoletti adit has shown that the zone contains little uranium.

There is no known geologic reason to assume that the deposits in the areas that the applicant proposes to explore under the expanded program will differ appreciably in grade or thickness from the uneconomic deposit disclosed in the Minoletti adit. A composite sample from old workings at the proposed new adit sites contained 0.045 percent U_3O_8 and 0.99 percent V_2O_5.

It is therefore recommended that San Juan Uranium Corporation's request for additional exploration assistance amounting to approximately $400,000.00 be denied.

Re: Docket DMEA-3390
Contract Idm-E706

Dear Mr. Walter:

This has reference to your long distance telephone call this date to Mr. H. M. Connors in which you requested a delay in the field examination of your property.

A field examination was made in accordance with your request for an amendment in the amount of $71,568.00. We are advised that the examination of your property was completed July 19, 1955; the field examiners were accompanied by a representative of your corporation.

Very truly yours,

W. M. Traver

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-5706
San Juan Uranium Corporation
Good Hope Claims
La Plata County, Colorado

Dear Mr. Traver:

The captioned application transmitted with your memorandum of June 2, for additional Government aid to further explore the subject property is referred to Region III Field Team for either a field examination or recommendations for the proposed project based on available information in your offices.

Enclosed are copies of memoranda from Mr. John E. Crawford dated June 10, and Mr. R. D. Trace, dated June 16, 1955, members of the Uranium Commodity Committee.

If the Field Team recommends an additional program approved by the Operator, please furnish us the necessary information to draft an amendment. In this connection, we will require the recording dates for all claims to be added to the project, and also leases and Consents to Lien for all claims not owned by the Applicant. The recording data submitted in the application lists the claims as "Hope" and "Lost Canyon," whereas the map submitted entitled "Mining Claims, San Juan Uranium Corporation," shows claims Hope No. 1 and Lost Canyon No. 1. If these claims are to be included in the project, we will require copies of a claim map which shows the claims as they are recorded.

Sincerely yours,

George C. Selfridge

Chairman, Operating Committee (GCB)

Memorandum

To: E. W. Ellis, Defense Minerals Exploration Administration

From: R. D. Trace, U. S. Geological Survey

Subject: Review of proposed amendment

The operator proposes to drive three new tunnels (in addition to the tunnel now being driven), each for 500 feet.

The proposed amendment is essentially a new application, and should be referred to the Field Team.

The program appears rather ambitious to me. I always thought of the Lightner Creek deposits as being low in grade.

INSTRUCTIONS

1. *Name of applicant.*—(*a*) State here your full legal name, in the form in which you will wish to contract, and your mailing address:

San Juan Uranium Corporation
Fidelity Building
Oklahoma City 2, Oklahoma

(*b*) If other than an individual, add to your name above whether a corporation, partnership, etc., and the name of the State in which incorporated or otherwise organized. See Page #1

(*c*) If a corporation, add to above statement, titles, names and addresses of officers. See Page #1

(*d*) If a partnership, add to the above statement the names and addresses of all partners.

2. *General.*—Read DMEA Order 1, "Government Aid in Defense Exploration Projects," before completing this application. Submit this application and all accompanying papers in quadruplicate (four copies), with your name and address on each sheet of the application and on all accompanying papers. Where sufficient space is not provided on the form for all required information, state it on an accompanying paper, with a reference in each case to the instruction to which it refers by number. Comply with all applicable instructions; or, if not applicable, so state. File the application with Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest field executive officer thereof.

3. *Applicant's property rights.*—(*a*) State the legal description of the land upon which you wish to explore, including all land which you possess or control that may be benefited by the exploration, and excluding any land or interest in land which is not to be included in the exploration project contract

See Page #1-A

(*b*) State any mine name by which the property is known. See Page #1

(*c*) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise Assignee

(*d*) If you are not the owner, submit with this application a copy of the lease, contract, or other document under which you control the property. See Page #1

(*e*) If you own the land, describe any liens or encumbrances on it .....

(*f*) If the land consists of unpatented claims, add to the description above, the book and page numbers for each recorded location notice. See Page #1-A

4. *Physical description.*—(*a*) Describe in detail any mining or exploration operations which have been or now are being conducted upon the land, including existing mine workings and production facilities. State your interest, if any, in such operations. Also describe accessibility of mine workings for examination purposes. See Page #2

(*b*) State past and current production, and ore reserves, if any, giving quantities and grades. See Page #3

(*c*) Describe the geologic features of the property, including mineralization, type of deposit (vein, bedded, etc.), and your reasons for wishing to explore. Illustrate with maps or sketches. Send with your application (but not necessarily as a part of it) any geologic or engineering report, assay maps, or other technologic information you may have, indicating on each whether you require its return to you. See Page #3

(*d*) State the facts with respect to the accessibility of the project: Access roads, distances to shipping, supply and residence points. See Page #4

(*e*) State the availability of manpower, materials, supplies, equipment, water, and power. See Page #4

5. *The exploration project.*—(*a*) State the mineral or minerals for which you wish to explore Uranium

(*b*) Describe fully the proposed work, including a map or sketch of the property showing a plan (and cross sections if needed) of any present mine workings, and the location of the proposed exploration work as related to such features as contacts, veins, ore-bearing beds, etc. See Page #5

(*c*) The work will start within 60 days and be completed within 24 months from the date of an exploration project contract.

(*d*) State the operating experience and background of the applicant with relation to the ability to carry out such exploration project, and also that of the person or persons who will supervise the operations. See Page #5

6. *Estimate of costs.*—Furnish a detailed estimate of the costs of the proposed work (you will have to use a separate sheet), under the following headings. Add the totals under all headings to give the estimated total cost of the project:

(*a*) *Independent contracts.*—(Note.—If the applicant does not intend to let any of the work to contractors, write "none" after this item. To the extent that the work is to be contracted, do not repeat the cost of the contract-work in subsequent items.) State the cost of any proposed independent contracts for the performance of all or any part of the work, expressed in terms of units of work (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved, etc.). See Page #5

(*b*) *Labor, supervision, consultants.*—Include an itemized schedule of numbers, classes and rates of wages, salaries or fees for necessary labor, supervision and engineering and geological consultants. See Pages #5 and #6

(*c*) *Operating materials and supplies.*—Furnish an itemized list, including items of equipment costing less than $50 each, and power, water and fuel. See Page #6

(*d*) *Operating equipment.*—Furnish an itemized list of any operating equipment to be rented, purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or suggested use-allowance based on present value, as the case may be. See Pages #6 and #7

(*e*) *Rehabilitation and repairs.*—Furnish a detailed list showing the cost of any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and which will be devoted to the exploration project. See Page #7

(*f*) *New buildings, improvements, installations.*—Furnish a detailed list showing the cost of any necessary buildings, fixed improvements, or installations to be purchased, installed or constructed for the benefit of the exploration project. See Page #7

(*g*) *Miscellaneous.*—Furnish a detailed list showing the cost of repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance, and payroll taxes. See Pages #7 and #8

(*h*) *Contingencies.*—Give an estimate of any necessary allowances for contingencies not included in the costs stated above. See Page #8

NOTE.—No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. (*a*) Are you prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No. 1)? See Page #11

(*b*) How do you propose to furnish your share of the costs?

[X] Money [X] Use of equipment owned by you [ ] Other

Explain in detail on acompanying paper.

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

4. PHYSICAL DESCRIPTION

(a) Some exploratory work has been carried out at several locations along the vein outcrop. These operations consist in the main of a 180 foot tunnel on Goodhope No. 2, 60 foot tunnels on Goodhope No. 7 and 13, and several openings that vary from a few feet in width to 50 feet in wideth, extending in from the outcrop from 10 feet to 50 feet on several additional Goodhope claims.

A small amount of exploratory work has also been done on the Nevada group, that consists mainly of an opening on the Nevada No. 4 approximately ten to fifteen feet wide and twenty-five feet deep and an opening on Nevada No. 5, approximately ten to fifteen feet wide and thirty feet deep, in from the outcrop.

The most recent exploratory work carried out on these groups of claims was the drilling of six core holes on Goodhope No. 8. The results obtained from these holes, show that they were located in a faulted zone where underground water could circulate freely and had leached out most of the mineral content, both uranium and vanadium oxides, that may have been in the vein when it was deposited. The holes were located progressively farther in from the outcrop, the first 50 feet, the second 100 feet, the third 150 feet, the fourth 200 feet, with the fifth and sixth farther down the dip. The first hole showed an approximate 4 feet of mineralized section, the 2nd hole 5 feet, with the thickness increasing with each hole drilled. Each core showed the presence of thin sections of good ore with 14 inches showing in hole No. 3.

The 180 foot tunnel located on Goodhope No. 2 is now being advanced under San Juan Uranium Corporation's Exploratory Project Contract No. Idm-E706, Docket No. DMEA 3390 (Uranium), and as of May 1st, 1955 had reached a total depth of 417 feet.

The tunnel known as the Minoletti Adit had been run approximately 180 feet at the time the mining claims in question were acquired by San Juan Uranium Corporation. It had encountered a faulted zone at about 165 feet and was stopped approximately 15 feet within this zone, so that the advancing of the tunnel was started in the faulted area. The "Aerial" map of the section, where the claims are located shows the fault and indicates that it may be anywhere from 400 feet to 500 feet or more in thickness. In the last 100 feet driven a number of lenses and gobs of ore was encountered that gave a good reading on the Geiger Counter. The quality of these lenses and gobs of ore has increased materially in the last 50 feet of the tunnel.

Most of the mine workings are readily accessible, with the exception of two of the shorter tunnels, which are open but the floors are covered with some six inches of water.

(b) Past production: During the latter part of World War II, approximately 1,000 tons of ore were mined and shipped to the mill at Durango, Colorado. Most of this tonnage came from the Goodhope group of claims, which averaged 2.85% vanadium oxide, the only value reported on. All of this ore contained uranium oxide as well as vanadium oxide, but there is no record or report available that discloses what the percent of the former might have been. In addition to this tonnage mined and shipped from the Goodhope group, some two to three hundred tons of ore have been mined and shipped from Nevada No.s 4 and 5, that averaged approximately 0.15% Uranium Oxide and 2.50% Vanadium Oxide.

There is no production from these claims at the present time nor any known ore reserves.

(c) The groups of mining claims under consideration, are located in the mountainous terrain of the La Plata Mountains. The formations that outcrop in the area covered by these claims, are of sedimentary origin, ranging in age from Permian to upper Cretaceous, that dip at an average of 15° to the South into the San Juan Basin. Northward these sedimentary beds have been cut occasionally by Tertiary intrusions, leaving mineralized zones in the limestone beds. The Uranium and Vanadium oxides appear to have been deposited in the upper Entrada sandstone formation simultaneously with the sand.

The uranium-vanadium ore is a "Roscoelite" type ore, which is typically a high vanadium and low uranium primary ore. From surface observations, the mineralized section is irregular, varying from a few inches to four feet in thickness and from zero to six feet below the contact with the todilto limestone formation above.

The Entrado sandstone is a highly cross-bedded formation, which would suggest "Eolian" deposition. The mineralized section appears to follow the pattern of the cross-bedding planes or "Rolls". The vein outcrop can be traced continously along the west ends of those claims facing main Lightner Creek or Goodhope No.s 3 and 6, and Nevada No.s 3 to 7 inclusive, as well as across those Goodhope claims located West and South of Main Lightner and the South Fork respectively.

The old workings, from which the ore mined and shopped was taken, are shallow and irregular and offer very little in the way of information as to the

expected mineral content or continuity of the ore back from the outcrop. Since both uranium and vanadium oxides leach readily where exposed, the vein outcrop as well as the old workings are of little or no value for accurate sampling.

In order that the applicant may plan an efficient and economical mining operation and determing whether a sufficient ore body or bodies exist, it is necessary to investigate the nature and occurance of the vein material, - will the series of rolls be found closer together or farther apart, do they increase in thickness and extend beyond the zone of surface leaching?

Attached is a map showing the location of the several groups of mining claims, the Goodhope, Nevada, Hope and Bald Mountain groups on main and South Lightner creeks, together with a group of six claims on upper Main Lightner Creek, and the Atom group on Deep Creek. It shows a layout of the proposed exploratory work as detailed in this Amendment to Contract No. Idm-E706, Docket No. DMEA 3390.

(d) These groups of claims, known as the Lightner and Deep Creek groups, lies approximately twelve (12) miles N. W. of Durango, Colorado, and can be reached over U. S. Highway No. 160 to a point three (3) miles West of Durango thence in a Northerly direction over a graded county road for a distance of six (6) miles, thence North over a private road to the property a distance of three (3) miles.

(e) Availability of Manpower: Due to the closing down of several mining properties in the Silverton, Colorado mining district there will be suitable man power available.

Materials and Supplies: Supply stores, lumber yards, hardware stores and other establishments, located in Durango, stock the necessary materials and supplies, that will be required.

Equipment: Equipment other than what can be obtained in Durango, can be purchased in Grand Junction or Denver, Colorado.

Water: There is sufficient water for all purposes in Lightner Creek, that flows all year. In addition there are several springs on the property that provide considerable water.

power: Electric power can be secured from "The Western Colorado Power Company", who have advised that their company will construct a power line to the property for the sum of $15,000.00. This amount to be advanced by the "San Juan Uranium Corporation" which will be refunded through one quarter (1/4) of the monthly power bill over a period of five years or until paid out.

For the proposed exploratory operations, gasoline or diesel driven motors will be used.

5. THE EXPLORATORY PROJECT:

(a) See Application form.

(b) The proposed exploratory work consists of the driving of three (3) 5'x7' new tunnels, one to be located on Nevada No. 3, one on Goodhope No. 3 and one on Atom No. 3, and will be in addition to that on Goodhope No. 2 which is now being driven ahead under Exploratory Project Contract No. Idm-E706, Docket No. DMEA 3390 (Uranium). It is planned to drive each of the new tunnels approximately 500 feet, and the present one now being driven on Goodhope No. 2, 300 feet beyond the point where the above exploratory Project Contract will carry it, or from approximately 530 feet from the portal. Each of these tunnels will be carried forward on grade, following the contour of the vein as it dips to the South. This exploratory work should carry each of the proposed new tunnels well beyond the leaching zone and the present one through the faulted and broken area, it is expected that it may still be in, when the present contract is completed thus making it possible to better evaluate the property with a greater degree of accuracy than would otherwise be possible. - We have been advised by geologists, who have made a study of the area covered by our claims, that in their opinion a body of high grade ore should be encountered at a point approximately 650 feet in from the portal of the present tunnel on Goodhope No. 2. This would be from 100 to 150 feet beyond the point where the present contract will carry it. -

(c) See Application Blank

(d) The applicant, President and operating manager for San Juan Uranium Corporation, is a graduate Mining Engineer, from the School of Mines, University of Minnesota, Class of 1912. He has been engaged in engineering and mining the greater part of the time since graduating, has served in an executive capacity in numerous mining and oil companies. The past few years he has carried on a consulting engineer's practice in Oklahoma City, Oklahoma. At present he is located at Oklahoma City, Oklahoma, but will personally supervise the proposed exploratory work or operations.

6. ESTIMATE OF COSTS:

(a) Independent contracts: Cat - Bull dozer, Claim Road construction and repair: $12.50 per hour - $100.00 per 8 hour day.

(b) Labor: To carry the proposed tunnels forward.

8 - Miners)	Guaranteed hourly rate:
8 - Muckers)	$1.57 and $1.49 respectively
10 - Laborers)	$1.25 per hour

Supervision: Foreman - $500.00 per month
Office Help: Clerk - $300.00 per month

(c) Operating Materials and Supplies.

Carbide - $11.35 per 100 lbs.
Explosives - Gelex 35%, $21.00 per 100 lbs. in ton lots.
Mine Rail - 20 lbs. - $8.55 per 100 lbs.
Fish or tie plates - $0.60 per paid
Truck spikes - $18.00 per 100 lbs.

Hand tools:	Miners pick at $3.15 each
	Miner's pick handle at $1.30 each
	Shovels at $3.95 each
	Bar-down Bar - 8 feet at $7.00
Pipe & Fittings:	1" black pipe - $22.10 per 100 ft.
	2" black pipe - $46.24 per 100 ft.
	4' line pipe - seamless - $128.53 per 100 ft.
	1" fittings - $0.35 average each
	2" fittings - $0.60 average each
Lumber:	1" boards - $120.00 per 1000 Bd. Ft.
	Dimension - $90.00 per 1000 Bd. Ft.
	Timber - $85.00 Per 1000 Bd. Ft.
Nails:	$0.15 per pound
Drill Steel:	2' - length - $4.81 each
	4' - length - $6.56 each
	6' - length - $9.56 each

Bits for drilling - $0.23 1/2 each
Gasoline - $0.32 1/2 per Gal.
Oil - $1.80 per Gal.
Rock Oil - $0.88 per Gal.
8' vent pipe - $69.35 per 100 foot.

(d) Operating Equipment:

The following is owned by the applicant and will be used in carrying on the proposed exploratory work.

1	- 125 Cu. ft. compressor - Jaeger	$ 3,365.00
1	- 600 Cu. ft. compressor - Jaeger	15,300.00
1	- Model 12B Eimco Mucker, 18' guage	3,120.00
4	- 380 Thor Drill with leg & Oiler	2,660.00
3	- Thor water tanks	210.00
1	- Dodge Power Wagon, to be used in transporting men and material	3,310.00
1	- 60 Ton steel ore bin - erected	3,000.00
1	- 1948 Dodge Tractor	2,581.00

1 - International TD18A Tractor equipped angledozer & front P.C.U.	21,273.00
1 - Blower	250.00
1 - Geiger Counter	102.00
1 - K & E Transit - complete w/ 200 ft. tape	1,031.00
Total vaulation of equipment owned by the Applicant and to be used for carrying on the proposed exploratory work -	$56,202.00

Operating Equipment to be purchased:

5 - Ore cars - 18" gauge - 20 Cu. Ft. capacity Roller Bearing - Each $246.50	1,232.50
3 - Blowers @$356.50	1,069.50
	$ 3,302.00

(e) None

(f) New Buildings, Improvements, Installations:

3 - 60 Ton wooden ore bins, covered	$ 6,000.00
Air and water lines	
2" - Black pipe 3,000 ft. @$46.24 per 100 ft.	1,387.20
1" - Black pipe 3,000 ft. @$22.10 per 100 ft.	663.00
Pipe fittings	200.00
Mine Rail - 18" gauge 20 lb. - 2000 ft. @$0.57	1,140.00
Fish plates - 100 @$0.60	60.00
Vent pipe - 2000 ft. 8" @$69.35 per 100 ft.	1,387.00
Timber & Lagging	350.00
Track Spikes 500 lbs. @$18.00	90.00
	$11,277.00

Road Construction:

Claim roads to proposed locations of tunnels	1,000.00

(g) Miscellaneous:

Maintenance & repair of equipment: 125 Cu. Ft. Compressor	110.00

600 Cu. Ft. Compressor	200.00
Thor Drills	200.00
Assaying	2,000.00
Liability Insurance	300.00
Payroll Tax	300.00
Clerk (Accounting)	2,500.00
Total (g)	$ 5,610.00

(h) Contingencies:

(b) Labor	300.00
(c) Operating Material & Supplies	400.00
(d) Operating Equipment	300.00
Total (h)	$ 1,000.00

ESTIMATED TOTAL COST OF PROJECT TOTALS
UNDER ALL HEADINGS

6. (b) Labor:

Labor - Miners	$ 3,200.00	
Labor - Muckers	3,000.00	
Labor - Laborers	1,000.00	
Supervision	3,000.00	
Total (b)		$10,200.00

Total Value	2,302.00	
Dodge Power Wagon.		
Operation	1,810.00	
Total (d)		$60,314.00

(e) None

(f) New Buildings, Improvement, Installation:		
As listed above	11,277.00	
Road Construction	1,000.00	
Total (f)		12,277.00

(g) Miscellanous:	
Maintenance & Repair of Equipment	
Listed above - Total Cost	5,610.00

(h) Contingencies:	
Listed above - Total Cost	1,000.00

Estimated cost of driving the proposed tunnels on the Exploratory Project, based on a four foot advance per day for 22 days per month, or 88 feet:

Sub-Headings	Cost per Foot
Labor-Miners & Muckers	$12.50
Explosives	3.00
Caps and Fuse	1.00
Labor - Laborers	1.00
Compressor & Drill Equipment	2.85
Dodge Power Wagon - Operation	2.50
Maintenance & Repair - Compressor	.15
Maintenance & Repair - Drill	.25
Assaying	1.00
Liability Insurance	.77
Payroll Tax	.60
Supervision	1.45
Engineering	1.45
Clerk - accounting	.85
Carbide	1.52
Track & Ditch	1.84
Drill Steel & Bits	2.50
Tools	.15
Airline & Waterline - Installed	1.50
Compressor - Operation & Depreciation	1.50
Drill Operation	.50
Sharpening Steel & Picks	.75
Blower & 8 in. vent line	1.50
Contingencies	2.00

Total Estimated cost of proposed tunnels $39.76

1800 x 39.76 = $71,568.00

San Juan Uranium Corporation
Main Office: Fidelity Building, Oklahoma City, Oklahoma
Branch Office: 1770 West 3rd Avenue, Durango, Colorado

7. (b) The applicant proposes to use his Dodge Power Wagon for transporting men and material from sources of supply, (Durango, Colorado) to the project, charging the cost of operation or .20 cents per mile driven. Estimated mileage per each working day 50 miles or a total cost per day of $10.00, or $2.00 per foot advance of the proposed tunnels. Estimated total length of each of three tunnels, 500 ft. or a total of 1500 ft., plus 300 ft. that it is proposed to advance the present tunnel or a grand total of 1800 ft.

Amount to be furnished through this piece of equipment will be:

1800 x $2.50 = $4,500.00

Estimated use - allowance for operating equipment owned by the applicant:

1800 ft. of tunnel @ $2.85 = $5,130.00

Summary of cost of equipment to be used:

Dodge Power wagon	$4,500.00
Operating Equipment	5,130.00
	$9,630.00

Amount to be furnished by applicant either as cash or in use of equipment:

Total estimated cost of project	$71,568.00
Applicant's share 1/4 or	17,892.00
Through use of equipment	9,630.00
Total cash that will be furnished	$ 8,262.00

SUMMARY REPORT
On
Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
Goodhope Claims
La Plata County, Colorado

Actual work on advancing the Minoletti Adit located on Goodhope claim No. 2 was started the first part of November, 1954. This tunnel had been carried forward 180 feet at the time the property was acquired by the operator and was stopped in a fault zone, after having penetrated it approximately 15 feet. The aerial map of this area shows that this faulted zone could be anywhere from 400 ft. to 500 ft. thick, which would mean that the tunnel should be advanced a total of 450 ft. to 500 ft. in order to drive through it and pick up the ore body that can be expected beyond the fault. In other words unless the tunnel is carried beyond the broken and/or faulted area a commercial body of ore cannot expected to be encountered.

Operations were slowed down during the winter months by the severe winter weather, so that the tunnel was not advanced as rapidly as it was estimated that it would. The fact that the ground was broken by cross slips, some of which were considerably harder that others, made mining operations more difficult. It requires a pattern of 24 holes to break out a round of muck that makes from 22 to 24 cars.

Up to the present time work has been carried on on the daylight shift only, but as soon as additional help can be hired, a night shift will be put on, so that drilling, blasting, track laying and attendant work will be done on the day shift, with mucking done on the night shift. This added operation should practically double the advance so that it should average between 4 ft. and 5 ft. per day.

The small 125 cu. ft. compressor will be replaced with a 600 cu. ft. which will furnish enough air to run a mucking machine, in addition to that required for drilling.

On the following page is an outline of the actual cost of advancing the Minoletti tunnel as revealed by the operator's books.

Memorandum

To: Hazel Berry, Operating Committee

From: Grace L. Ault, Rare & Miscellaneous Metals Division

Subject: Amendment No. 1, dated April 5, 1955
Docket No. DMEA-3390 (Uranium)
Contract Idm-E706
San Juan Uranium Corporation
LaPlata County, Colorado

Mr. Knouse has reviewed and approved the above-named amendment, suggesting that it be further reviewed by the Legal Division.

Mr. Ellis, in addition, comments as follows:

"Amendment No. 1 (DMEA-3390) does not extend the repayment period. However, total period of contract is only 1 year and amount small, so perhaps it is not necessary to correct the Field Team."

Contract Idm-E706

Dear Mr. Walker:

Enclosed are the original and five copies of Amendment No. 1 to Contract Idm-E706 which we have prepared in conformance with your request of March 21, 1955 to extend the period for completion of the project work from six months to one year.

All copies of the amendment should be signed by you, the corporate seal affixed, and returned to this office, leaving the date blank.

Upon signature by the Executive Officer, DMEA Field Team, Region III for the Government, your copy of the amendment will be forwarded to you.

Very truly yours,

Re: Docket DMEA 3390 (Uranium)
Contract Idm-E706

Dear Mr. Walters:

Your attention is directed to the provisions of Article 3 of Exploration Project Contract form MF-200(A) on which Contract Idm-E706 is prepared. Article 3 stipulates that the project shall be brought to completion within a period of six months from the date of the contract, or in effect by March 13, 1955.

If you are desirous of maintaining the contract in force beyong March 13, 1955 you should immediately request an extension of the period for the completion of the project work for such additional time as you deem will be necessary to enable you to complete the work authorized.

We will appreciate hearing from you on this matter at your earliest convenience.

Very truly yours,

W. M. Traver

Re: Docket No. DMEA-3390 (Uranium)
Contract No. Idm-E706
Good Hope claims
La Plata County, Colorado
Proposed amendment

Dear Mr. Walter:

This is with reference to your application for additional Government aid to further explore the subject property. The additional total cost of the proposed work is $400,000.00.

Since the original contract was executed only a small percentage of the work set forth therein has been completed. Therefore, we are unable at this time to evaluate the findings and render a decision on the above proposal. If, after the work outlined in the original contract is nearly completed, you request a further review of the above proposal it will then be considered in the light of the findings at that time.

Sincerely yours,

C. O. Mittendorf

Re: DMEA-3390
San Juan Uranium Corp.
(Good Hope & Nevada Claims)
La Plata Co., Colo.
$10,500 - Uranium

Memorandum

To: E. W. Ellis, Defense Minerals Exploration Administration

From: E. L. Newcomb, U. S. Geological Survey

Subject: Proposed amendment to increase contract to $410,500

The operator's proposed amendment to increase his present contract is unreasonable and should not be further considered at this time.

The Minoletti adit work should be completed before any additional exploration is planned for the Good Hope and Nevada claim groups.

Contract Idm-E706, San Juan Uranium Corporation

Enclosed is a complete copy of a request for an amendment to Contract Idm-E706 submitted by San Juan Uranium Corporation.

Contract Idm-E706 was prepared in this office and provides for 350 feet of drifting at a total cost of $10,500.00 (Government amount $7,875.00). Our records indicate that 40 feet of drifting has been completed to date, but payment to the operator has not been made as the original MF-104 forms received were in error.

It appears to us that the consideration of this amendment, especially before the completion of work authorized under the existing contract, would not be in the best interests of the Government. Copies of the report of examination were forwarded to your office. This work proposed is in addition to that authorized and not in lieu of it.

Acceptance of this application must be decided at the Washington level, but we do not consider an amendment for $400,000.00 to a $10,500.00 contract to be appropriate, at least before completion of the authorized work. Please advise us of your recommendations.

Dear Mr.King:

A memorandum from Mr. John F. Shaw dated September 13 inquires if the four Washington copies of the Field Team's report of examination of the captioned project accompanied the Field Team memorandum of July 19, 1954. This is to advise you that the four copies did accompany the memorandum of July 19.

Sincerely yours,

George C. Selfridge

Office Memorandum • UNITED STATES GOVERNMENT

TO : E. Wm. Ellis, DMEA Member, Uranium Commodity Committee

DATE: August 5, 1954

FROM : Arthur P. Butler, Jr., USGS Member, Uranium Commodity Committee

SUBJECT: Field Team Report of examination, DMEA Docket 3390 (uranium), San Juan Uranium Corp., Durango, Colo., applicant; Good hope claim group, unsurveyed Sec., T. 36 N., R. 10 and 11 W., La Plata County, Colorado

As the result of examination of the applicant's property, the Field Team examiners recommended driving 350 feet of adit to explore for uranium and vanadium ore in the upper part of the Entrada formation. A contract is being executed in Region IV.

Thin seams of mineralized rock are continuous for 400 feet in the vicinity of the workings and thicken locally to flat-bottomed rolls, lenses, and pods as much as 4 feet thick and from 1 to 10 feet long. The applicant reports that 1,000 tons of ore have been mined, and 336 tons recorded by Union Mines Development Corporation assayed 0.134 percent U_3O_8.

The continuity of mineralized rock and the known distribution of thicker parts suggest that the proposed exploration may result in finding possibly significant amounts of ore. The Field Team, therefore, recommended driving a 350 foot extension of the Minoletti tunnel.

I concur.

Memorandum

To: Executive Officer, DMEA Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 3390 (Uranium), San Juan Uranium Corporation (Goodhope claims), LaPlata County, Colo.

Transmitted herewith are the original and ten copies of a "Summary, Conclusions, and Recommendations" by E. M. Conners, Bureau of Mines, and S. A. Harshman, Geological Survey, and of E. M. Conners' engineering report on the above docket.

Conners concludes that the strong ore bearing outcrop traced across 16 Goodhope lode claims, and a sizeable past production of vanadium ore during World War II when the uranium content, although doubtless present, was not paid for, justifies exploration. Core drilling from surface is considered an unsatisfactory method of exploration in this case and the applicant's proposal is unsatisfactory also because the suggested adit due to the topography would be only 25 feet below surface after 200 feet of adit advance was completed. He recommends in place of the requested work the extension of an existing adit, the Minoletti, with a portal on the Goodhope No. 1 claim 350 feet along the mineralized zone at the top of the intrusive sandstone. A short-term, unit-cost contract is suggested with drifting at $30.00 a foot for a total cost of $10,500.00, Government participation $7,875.00.

I concur with his conclusions and recommendations.

The brochure furnished with your memorandum of June 8, 1954, instructing me to make a field examination and prepare a report, is returned herewith.

GOODHOPE CLAIMS
SAN JUAN URANIUM CORPORATION
LaPLATA COUNTY, COLO.

SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

By H. M. Connors and E. N. Harshman

The San Juan Uranium Corporation made application for Government assistance to explore the Goodhope claims, LaPlata County, Colo., for uranium. The applicant proposed to drive a new adit, 600 feet, along a mineralized zone, beginning at a point on the outcrop near the center line of the Goodhope No. 1 claim. The proposed exploration program was estimated by the applicant to cost $31,250.00.

The application, assigned Docket No. DMEA 3390, was referred to the Bureau of Mines and Geological Survey for investigation, and a field examination of the property by a Region IV examining team was made June 16, 1954.

Vanadium-uranium ore occurs in a 1/4-inch to 4-foot thick zone near the top of the Entrada sandstone of upper Jurassic age. This zone appears to be continuous over a wide area. Ore occurs in irregularly spaced rolls, lenses, and pods, generally flattened on the bottom and pitching southeasterly. Individual pods are connected by seams or bands of ore, in some places not over 1/4 inch thick. Limited mining operations have exposed ore as much as 4 feet thick.

The examiners concluded that a modified exploration program is warranted which should result in the discovery of significant amounts

of uranium and vanadium ore, and recommend extending the Minoletti adit an additional 350 feet along the mineralized zone. This recommended program was estimated to cost $10,500.00, Government participation 75 percent or $7,875.00.

SAN JUAN URANIUM CORPORATION
LA PLATA COUNTY, COLORADO

INTRODUCTION

The San Juan Uranium Corporation, Silver Spur Motel, Durango, Colorado, has applied to the Defense Minerals Exploration Administration for assistance to explore for uranium ore on the Goodhope claim group. They propose to explore a bedded deposit of vanadium-uranium ore by a 600 foot drift at an estimated cost of $31,250.00.

The property is located in an unsurveyed portion of the San Juan National Forest in T. 36 N., R. 10 and 11 W., New Mexico Principal Meridian, La Plata County, Colorado. It is about 9 miles (airline) northwest of Durango, Colorado, and is reached by 3.9 miles of paved highway (U.S. 160 west from Durango) and 8 miles of fair dirt road along Lightner Creek. Figure 1 of the Engineering Report shows the location of the claims and the access roads.

The claims were examined on June 16, 1954, in company with H. M. Connors, U. S. Bureau of Mines, R. B. Walter, president of the San Juan Uranium Corporation, Paul E. Clark, supervising geologist-engineer for the corporation, and F. W. Pinkerton, foreman and one of the original claim locators.

It is concluded that exploration on the Goodhope claims may lead to the discovery of significant amounts of vanadium-uranium ore, and a program of drifting on the ore zone is recommended.

GEOLOGY AND ORE DEPOSITS

The geology and ore deposits of the La Plata Mountains are described by Edwin B. Eckel (1949) in U. S. Geological Survey Professional

Paper 219. The following summary of the regional geologic setting is taken largely from that publication.

The La Plata mountains are composed of sedimentary rocks, ranging in age from Pennsylvanian to Cretaceous, and sills, stocks, and dikes of porphyritic and non-porphyritic igneous rocks of late Cretaceous or early Tertiary age.

The major structural feature is a domal uplift of the sedimentary rocks. The dome is about 15 miles in diameter and is partly bounded by a horseshoe-shaped hinge fold, open toward the south and encircling the central part of the mountains. Major and minor faults have broken the sediments, particularly along the hinge line and along the north and northeast edge of the dome. The maximum uplift of the sediments is about 6,000 feet. Eckel concludes that doming was caused in part by intrusion of the many sills now exposed in the area and in part by folding in the basement rocks.

The Goodhope group of claims is in an area of gently dipping sedimentary rocks on the southern flank of the La Plata Mountains. Erosion has exposed a thick section of sandstone, limestone, mudstone, and shale. Progressively from the bottom upward the formations are: the Dolores formation of Triassic age, consisting of 400 to 500 feet of red shale and mudstone; the Entrada sandstone of Upper Jurassic age, 80 to 100 feet thick; the Wanakah formation of Upper Jurassic age, consisting of 20 to 25 feet of limestone (Pony Express member) overlain by 100 to 125 feet of sandstone and marl; and the Junction Creek sandstone of Upper Jurassic age, 200 to 300 feet thick.

No major faults or folds were recognized in the immediate vicinity of the claims. Minor faults, shear zones and folds have disturbed the sedimentary rocks but the presence of these features should

not complicate exploration of the deposit.

The vanadium-uranium ore deposits of the Lightner Creek area are in the upper part of the Entrada sandstone, from 1 to 4 feet below the contact with the overlying Pony Express limestone member of the Wanakah formation. This limestone is called the Todilto limestone by the applicant but the correlation between the Pony Express and the true Todilto limestone is not proven.

The ore-bearing zone appears to be continuous over a wide area southwest of the south fork of Lightner Creek. It can be traced without interruption along at least 400 feet of cliff face near the workings shown on Figure 4, and almost without interruption in road cuts extending more than 2,000 feet northwest from these workings.

Prospecting and limited mining operations have shown the ore to be in a tabular zone ranging from a few inches to 4 feet in thickness. The ore is tentatively classed as a roscoelite and corvusite type, high in vanadium.

Ore occurs in irregularly spaced rolls, lenses, and pods, generally flattened on the bottom, and pitching southeasterly. Individual pods are connected by seams or bands of ore, in some places not over 1/4 inch thick but always present. The lower contact between the ore and sandstone is rather sharp and in some places is marked by a thin clay seam; the upper contact is gradational. The factors governing the position, size, and grade of individual ore pods are not readily apparent but the position of some of the pods may be governed by cross-bedding in the Entrada sandstone.

Individual pods, lenses, or rolls of ore range from a few inches to 4 feet in thickness and from 1 to 10 feet in length. The average thickness of the ore is estimated to be about 1.0 foot.

SAMPLES

Seven samples of ore were taken from the outcrop of the mineralized sandstone. All sample locations are shown on figure 2 in the engineering report and 5 of the 7 locations are shown on figure 4 of this report. Most of the samples represent ore left at the borders of thicker ore pods removed by previous mining operations. Assays of the samples by the U. S. Bureau of Mines laboratories, Salt Lake City, Utah, follow:

Sample No.	Description	$\%U_3O_8$	$\%V_2O_5$	$\%CaCO_3$
HMC-8	11 inch cut of ore in zone 15 inches below Pony Express limestone	0.020	2.66	8.60
HMC-9	7 inch cut of ore in zone 3 feet below Pony Express limestone	0.038	4.58	1.40
HMC-10	12 inch cut in northwestern part of cliff workings	0.374	5.73	1.40
HMC-11	2 inch cut in workings 90 feet southeast of HMC-10	0.477	24.60	1.40
HMC-12	12 inch cut on edge of mined ore lens in first working northwest of Minoletti Tunnel	0.273	11.10	1.40
HMC-13	20 inch sample at face of Minoletti Tunnel	0.045	1.36	6.8
HMC-14	15 inch cut from south side of Minoletti Tunnel (edge of mined out ore lens) 40 feet from face of tunnel	0.196	2.21	3.60

ORE RESERVES

An inferred ore reserve of several thousand tons is indicated by the length of the outcrop along the cliff face and the assays of samples taken by the examining team.

REPORTED PRODUCTION

The applicant reports a production of 1,000 tons of ore containing 2.85% V_2O_5 and an unknown amount of U_3O_8. Stanton B. Keith (1945) in a U.M.D.C. report on the property, gives a production of 336 short dry tons of ore containing 2.94% V_2O_5 and about 0.134% U_3O_8. The U_3O_8 content was obtained by assaying the mill pulps on a "Michele" laboratory counter.

EXPLORATION PROGRAM

The applicant proposed to explore the deposit by means of a 600 foot adit to be driven from the cliff face westerly along the ore zone (figure 4). The estimated cost of the program was $31,250.00. The examining team feels that the deposit can be explored to better advantage and at less cost ($10,500) by extending the Minoletti tunnel 350 feet westerly along the ore zone (figure 4). The adit proposed by the applicant lies close to and parallel with the outcrop and although the exploration would supplement ore width amd grade data obtained by sampling the outcrop, it would not give a maximum of data on the extent of deposit. The precipitous character of the cliff face above the old workings makes exploration by drilling impractical.

CONCLUSIONS AND RECOMMENDATIONS

The Goodhope claim group of the San Juan Uranium Corporation appears to contain vanadium-uranium deposits of commercial grade. Exploration appears warranted. The outcrop of the ore zone is continuous for several thousand feet as shown on figure 2 of the engineering report and figure 4 of this report. The ore ranges from 1/4 inch to 4 feet in thickness and may prove to average about 1 foot thick. Although it is a high vanadium type ore, assays of representative samples from the outcrop

and old workings indicate a content of from 0.020 to 0.477 percent U_3O_8. Four of the five samples, taken in the area proposed for exploration, contain at least 0.20% U_3O_8 and 2.21 to 24.6% V_2O_5. The grade of the ore as indicated by the examining team's samples is somewhat higher than the record of shipments reported in Keith's (1945) U.M.D.C. report.

It is recommended that a program be approved for exploring the deposit by extending the Minoletti tunnel 350 feet westerly along the ore zone (figure 4) at a cost, estimated by the U. S. Bureau of Mines, of $10,500. This program has been discussed with the applicant and is acceptable to him.

GOODHOPE CLAIMS
SAN JUAN URANIUM CORPORATION
LaPLATA COUNTY, COLO.

ENGINEERING REPORT

By Hugh M. Connors

INTRODUCTION

The San Juan Uranium Corporation has applied to the Defense Minerals Exploration Administration for assistance to explore for uranium on the Goodhope lode claims, LaPlata County, Colo. (fig. 1). The applicant proposed to drive a 5- x 7-foot adit in a westerly direction along the mineralized zone a distance of 600 feet from the outcrop on Goodhope No. 1 claim as shown in figure 2. According to the management, several openings had been made along the outcrop, but none had been driven far enough to explore the deposit beyond the apparent leached zone. The applicant estimated the total cost of the project at $31,250.00.

The Goodhope claims were inspected on June 16, 1954, by Defense Minerals Exploration Administration representatives, accompanied by R. B. Walter, president, San Juan Uranium Corporation, and Paul E. Clark, engineer and geologist. After examining and sampling the outcrop and exposed, old workings, it was concluded that further exploration is warranted by a modified program.

ACKNOWLEDGMENTS

Acknowledgments are made to R. B. Walter and Paul E. Clark who assisted the inspecting team in every way possible.

FIGURE 1 - LOCATION MAP, SAN JUAN URANIUM CORP., LA PLATA COUNTY, COLO. (DMEA 3390)

FIGURE 2 - CLAIM MAP, SAN JUAN URANIUM CORP., LA PLATA COUNTY, COLO. (DMEA 3390)

LOCATION, TOPOGRAPHY, AND PHYSICAL FEATURES

The Goodhope lode claims Nos. 1, 2, 4, 5, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, and 19 are located in an unsurveyed area in the San Juan National Forest in T. 36 N., R. 10 or 11 W. The company has hired the LaPlata County surveyor to establish the exact location. This group of claims is on the west side of the South Fork of Lightner Creek. The Goodhope claims Nos. 3 and 6, and Nevada claims Nos. 1, 2, 3, 4, 5, 6, and 7, which are a part of the "Assignment of Mining Lease" submitted with the application, lie on the east side of the South Fork of Lightner Creek and will receive no benefit from the proposed exploration work. The subject property can be reached over U. S. Highway 160 to a point 3 miles west of Durango, thence in a northerly direction over a graded county road for a distance of 6 miles, at which point a private road extends 3 miles northwesterly to the southeast corner of the property. The elevation at this point is approximately 8,000 feet. The mountain on which these claims are located slopes upward abruptly from the cliff faces where the outcrop is exposed, making preparation for diamond drilling very costly and requiring long holes to penetrate the ore horizon. Labor is plentiful in the area and supplies may be obtained at Durango. Milling facilities are available at Durango, a distance of 12 miles.

HISTORY AND PRODUCTION

The applicant claims that the property produced approximately 1,000 tons of ore that averaged 2.85 percent V_2O_5 during World War II. At that time no payment was made for uranium, and the applicant has no

knowledge of the uranium content in this ore which was shipped to the mill at Durango.

OWNERSHIP

The "Assignment of Mining Lease" which accompanied the application indicates that F. W. and Elsie A. Pinkerton, A. S. and Catherine M. Butell, C. E. Linn and _____ Linn, his wife, Fred Brown, attorney-in-fact for Lloyd Zentz and _____ Zentz, his wife; and F. W. Pinkerton, Jr., and Carol M. Pinkerton, his wife, leased the property to William M. and Bettie Smallwood who sometime later, date not shown, assigned the lease to the San Juan Uranium Corporation, incorporated in the State of Delaware.

The application states that the claims are recorded in the office of the County Recorder of LaPlata County, Colo., as follows:

Goodhope Claim No.	Date	Book	Page
1	September 12, 1942	217	570
2	September 12, 1942	217	571
4	September 12, 1942	217	573
5	September 12, 1942	217	574
7	September 12, 1942	246	2

Amended 5	September 13, 1944	246	42
Amended 5	October 16, 1953	246	293

DESCRIPTION OF THE DEPOSITS

The formations that outcrop on the Goodhope claims are of sedimentary origin. The ore horizon appears to be in the top of the Entrada sandstone and just below the bottom of the Todilto limestone, with a strike of N. 80° E. and a dip of S. 15°. Some minor faulting was noted in the Minoletti tunnel which is 180 feet in length and the longest tunnel on the property. Other old workings are shallow and irregular, resemble cliff dwellings, and extend from 10 to 50 feet beyond the outcrop. The ore is roscoelite which is typically high vanadium and low uranium content. The vein outcrop can be traced continuously along the east side of the group of claims and the mineralized section is irregular, varying from a few inches to 3 feet in thickness.

MINEABLE ORE RESERVES

Inferred ore reserves are estimated as a few thousand tons, based on past production and examination of the outcrop.

PRESENT STATUS

Exploration and Development

During World War II approximately 1,000 tons of ore were mined and shipped to the mill at Durango. This production came from the old workings, consisting of the Minoletti adit (fig. 3), 180 feet in length and located on the Goodhope No. 2 claim, and several openings in the cliff face that vary from a few feet to 50 feet in width and extend in from the outcrop about 10 to 50 feet.

FIGURE 3 - MINOLETTI ADIT, SAN JUAN URANIUM CORP., LA PLATA COUNTY, COLO. (DMEA 3390)

Core drilling is now in progress and three holes have been completed on the Goodhope No. 8 claim. The approximate location of these holes is shown on figure 2. The cores were not available for inspection by the field examiners. The applicant stated that the first two holes showed mineralized zones of 4 and 5 feet, respectively. The third hole was reported to have penetrated 14 feet of ore.

Seven samples were taken by the field examiners at locations as shown on figure 2 as follows:

Sample number	Goodhope claim number	Sample width (inches)	Description	U_3O_8 (percent)	V_2O_5 (percent)	$CaCO_3$ (percent)
HMC-8	8	11	11" streak 15" below bottom of Todilto limestone.....	0.020	2.66	8.6
HMC-9	4	7	7" streak 36" below bottom of Todilto limestone.....	0.038	4.58	1.4
HMC-10	1	12	12" streak in top room of old workings approximately 5 feet in from cliff face.....	0.374	5.73	1.4
HMC-11	1	2	2" streak in second room 10 feet southeast of top room.....	0.477	24.6	1.4
HMC-12	2	12	Outer edge of lens in first room above Minoletti adit.....	0.273	11.1	1.4
HMC-13	2	20	Face of Minoletti adit...	0.045	1.36	6.8
HMC-14	2	15	15" streak on south side of a mined out lens, 40 feet from face of Minoletti tunnel.....	0.196	2.21	3.6

Mining Equipment and Other Facilities

Equipment now on the property consists of a new Jaeger 125-c.f.m. compressor, a Thor 380 sinker leg combination with water tank, and a new Dodge Power Wagon. There are no buildings, mine cars, rails, or pipe on the property. Jeep trails have been built beyond the Minoletti adit.

PROJECT PROPOSALS, WITH COSTS

The applicant proposed to drive a 5- x 7-foot adit, 600 feet on the vein, beginning at a point on the outcrop near the center line of the Goodhope No. 1 claim. His estimate of the total cost of the project was as follows:

(a)	Independent contracts:		
	Bulldozer--road repairs		$ 300.00
(b)	Labor:		
	Miners	$7,332.00	
	Laborers	1,222.00	
	Supervision	3,055.00	
	Consultants,		
	Engineering	305.50	
	Clerk	1,833.00	
	Total		13,747.50
(c)	Operating materials and supplies:		
	Carbide	305.50	
	Explosives	1,830.00	
	Caps	458.25	
	Mine track and ditch	1,069.25	
	Tools	61.10	
	Drill steel and bits	1,283.10	
	Air and water lines	611.00	
	Compressor operation	366.60	
	Drill operation	244.40	
	Sharpening steel and picks	458.25	
	Total		6,687.45
(d)	Operating equipment:		
	Compressor and drill rental	1,393.08	
	Dodge Power Wagon operation	1,222.00	
	To be purchased--		
	Water pump and line	500.00	
	Water tank	75.00	
	Hand forge	103.31	
	Conveyor and buckets	600.00	
	4 muck sheets	100.00	
	Detonator	60.00	
	2 mine cars	570.00	
	Total		4,623.39
(e)	None		

(f) New buildings, improvements, installations:		
Office building	$2,000.00	
Office furniture	500.00	
Change house	300.00	
Total		$ 2,800.00
(g) Miscellaneous:		
Maintenance and repair of equipment		
Compressor	91.65	
Drill	152.75	
Conveyor	213.85	
Assaying	611.00	
Liability insurance	470.47	
Payroll tax	329.94	
Total		1,869.66
(h) Contingencies - Total		1,222.00
Grand total		$31,250.00

APPLICANT'S SUMMARY OF COSTS

The applicant's summary of costs excludes items to be purchased and is based on an average advance of 5 feet per day for 22 days per month, making an estimated total advance of 110 feet per month.

Sub-Headings	Grand total	Monthly total	Cost per foot
Labor-miners	$ 7,332.00	$1,320.00	$12.00
Explosives	1,830.00	330.00	3.00
Electric caps and wire	458.25	82.50	.75
Labor	1,222.00	220.00	2.00
Compressor and drill equipment	1,393.08	250.00	2.28
Dodge Power Wagon operation	1,222.00	220.00	2.00
Maintenance and repair-Compressor	92.65	16.50	.15
-Drill	152.75	27.50	.25
-Conveyor	213.85	38.50	.35
Assaying	611.00	110.00	1.00
Liability insurance	470.47	84.70	.77
Payroll tax	329.94	59.40	.54
Supervision	3,055.00	550.00	5.00
Engineering	305.50	55.00	.50
Clerk	1,833.00	330.00	3.00
Carbide	305.50	55.00	.50
Track and ditch	1,069.25	192.50	1.75

(Continued)

Sub-Headings	Grand total	Monthly total	Cost per foot
Tools	$ 61.10	$ 11.00	$ 0.10
Drill steel and bits	1,283.10	231.00	2.10
Air and water lines	611.00	110.00	1.00
Compressor-operation	366.60	66.00	.60
Drill-operation	244.40	44.00	.40
Sharpening steel and picks	458.25	82.50	.75
Contingencies	1,222.00	220.00	2.00
Totals	$26,141.69*	$4,706.90*	$42.79

*Totals should be $26,142.69 and $4,706.10

CONCLUSIONS

The strong outcrop which can be traced across the width of ten lode claims, the favorable formations, and past production warrant some exploration to determine the character and tenure of the mineralized zone beyond the zone of surface leaching. Core drilling would be unsatisfactory because of the steep terrain, long holes, and difficulty of obtaining core in the fractured mineralized zone.

The applicant's proposed adit location is not satisfactory because an abrupt bend in the outcrop above the portal site would make the adit approximately 25 feet from surface at one point after 200 feet of drifting had been accomplished (see fig. 4 with geologic report).

Extending the Minoletti adit, which has already been driven approximately 180 feet, along the mineralized zone will give more backs and deeper penetration of the mineralized zone at less cost. This plan has been discussed with the applicant and meets with his approval.

The applicant, Mr. R. B. Walter, president of the San Juan Uranium Corporation, is a mining engineer with a wide experience in mining operations and highly qualified to conduct the exploratory work.

RECOMMENDATIONS

It is recommended that a short-form, Defense Minerals Exploration Administration contract be prepared for the applicant to extend the Minoletti adit 350 feet beyond the present face, in a westerly direction along the mineralized zone at the top of the Entrada sandstone. A unit cost of $30.00 per foot for a 5- x 7-foot drift is agreeable to the applicant. This price includes sampling and assaying one sample for each drift round, or a total of 70 samples. The total cost of the modified exploratory program would be $10,500.00, Government participation 75 percent or $7,875.00.

INSTRUCTIONS

1. *Name of applicant.*—(*a*) State here your full legal name, in the form in which you will wish to contract, and your mailing address:

San Juan Uranium Corporation
Silver Spur Motel
Durango, Colorado

(*b*) If other than an individual, add to your name above whether a corporation, partnership, etc., and the name of the State in which incorporated or otherwise organized. See page #1

(*c*) If a corporation, add to above statement, titles, names and addresses of officers. See Page #2

(*d*) If a partnership, add to the above statement the names and addresses of all partners.

2. *General.*—Read DMEA Order 1, "Government Aid in Defense Exploration Projects," before completing this application. Submit this application and all accompanying papers in quadruplicate (four copies), with your name and address on each sheet of the application and on all accompanying papers. Where sufficient space is not provided on the form for all required information, state it on an accompanying paper, with a reference in each case to the instruction to which it refers by number. Comply with all applicable instructions; or, if not applicable, so state. File the application with Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest field executive officer thereof.

3. *Applicant's property rights.*—(*a*) State the legal description of the land upon which you wish to explore, including all land which you possess or control that may be benefited by the exploration, and excluding any land or interest in land which is not to be included in the exploration project contract

See page #11 (Exhibit A)

(*b*) State any mine name by which the property is known. See page #1

(*c*) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise assignee

(*d*) If you are not the owner, submit with this application a copy of the lease, contract, or other document under which you control the property. See pages 12, 13 and 14 (Exhibit B)

(*e*) If you own the land, describe any liens or encumbrances on it

(*f*) If the land consists of unpatented claims, add to the description above, the book and page numbers for each recorded location notice.

4. *Physical description.*—(*a*) Describe in detail any mining or exploration operations which have been or now are being conducted upon the land, including existing mine workings and production facilities. State your interest, if any, in such operations. Also describe accessibility of mine workings for examination purposes. See page #2

(*b*) State past and current production, and ore reserves, if any, giving quantities and grades. See page #2

(*c*) Describe the geologic features of the property, including mineralization, type of deposit (vein, bedded, etc.), and your reasons for wishing to explore. Illustrate with maps or sketches. Send with your application (but not necessarily as a part of it) any geologic or engineering report, assay maps, or other technologic information you may have, indicating on each whether you require its return to you. See page #3 and #4 and pages 15, 16, 17 and 18

(*d*) State the facts with respect to the accessibility of the project: Access roads, distances to shipping, supply and residence points. See page #4

(*e*) State the availability of manpower, materials, supplies, equipment, water, and power.

See page #4

16—66551-1

5. *The exploration project.*—(*a*) State the mineral or minerals for which you wish to explore uranium oxide and vanadium oxide

(*b*) Describe fully the proposed work, including a map or sketch of the property showing a plan (and cross sections if needed) of any present mine workings, and the location of the proposed exploration work as related to such features as contacts, veins, ore-bearing beds, etc. See page # 5 and pages 15, 16, 17, and 18 (Exhibits C, D, E & F)

(*c*) The work will start within 10 days and be completed within 6 months from the date of an exploration project contract.

(*d*) State the operating experience and background of the applicant with relation to the ability to carry out such exploration project, and also that of the person or persons who will supervise the operations. See page #5

6. *Estimate of costs.*—Furnish a detailed estimate of the costs of the proposed work (you will have to use a separate sheet), under the following headings. Add the totals under all headings to give the estimated total cost of the project:

(*a*) *Independent contracts.*—(Note.—If the applicant does not intend to let any of the work to contractors, write "none" after this item. To the extent that the work is to be contracted, do not repeat the cost of the contract-work in subsequent items.) State the cost of any proposed independent contracts for the performance of all or any part of the work, expressed in terms of units of work (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved, etc.). See Page #5 and #7

(*b*) *Labor, supervision, consultants.*—Include an itemized schedule of numbers, classes and rates of wages, salaries or fees for necessary labor, supervision and engineering and geological consultants. See page #5 and #7

(*c*) *Operating materials and supplies.*—Furnish an itemized list, including items of equipment costing less than $50 each, and power, water and fuel. See page #6 and #7

(*d*) *Operating equipment.*—Furnish an itemized list of any operating equipment to be rented, purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or suggested use-allowance based on present value, as the case may be. See Page #6 and #8

(*e*) *Rehabilitation and repairs.*—Furnish a detailed list showing the cost of any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and which will be devoted to the exploration project. none

(*f*) *New buildings, improvements, installations.*—Furnish a detailed list showing the cost of any necessary buildings, fixed improvements, or installations to be purchased, installed or constructed for the benefit of the exploration project. page 6 & 8

(*g*) *Miscellaneous.*—Furnish a detailed list showing the cost of repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance, and payroll taxes. See page #7 and #8

(*h*) *Contingencies.*—Give an estimate of any necessary allowances for contingencies not included in the costs stated above. See page #7 and #8

NOTE.—No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. (*a*) Are you prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No. 1)? yes

(*b*) How do you propose to furnish your share of the costs? See page #10

[X] Money [X] Use of equipment owned by you [ ] Other

Explain in detail on acompanying paper.

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

Vice President: James B. Kenney, Fidelity Bldg, Okla. City, Okla.
Secretary - Treasurer: P. Ray Schwoerke, Fidelity Bldg., Oklahoma City, Okla.

3. (b) Goodhope Claims located on West side of Lightner Creek, La Plata County, Colorado.

4. PHYSICAL DESCRIPTION

(a) Some exploratory operations have been carried out in the past at several locations on the vein outcrop. These operations consist in the main of a 180 foot tunnel on Goodhope No. 2, 60 foot tunnels on Goodhope Nos. 7 and 13 and several openings that vary from a few feet in width to 50 feet, extending in from the outcrop from 10 to 50 feet.

The only exploratory work now being carried on is core drilling on Goodhope No. 8. This work is being done under contract by Johnson and Youvan of Naturita, Colorado, for San Juan Uranium Corporation or the applicant. Three core holes have been completed to date.

The three core holes completed to date are located on Goodhope No. 8 and marked on the claim map. These holes were and are being drilled to determine the extent of the mineralized zone as well as the amount of mineral contained in the vein material. The first hole showed 4 feet of mineralized section from 33' to 37'. The second hole showed 5 feet of mineralized section from 51' to 56', and the third hole showed 6 feet of mineralized section from 95' to 101'. The results obtained from these core holes show that they are in a faulted zone where underground water can circulate freely so have leached out most of the mineral content, uranium oxide and vanadium oxide, that may have been in the vein when deposited. The core from hole no. 3 showed about 14 feet of good ore, which possibly indicates that as the holes are drilled farther in from the outcrop, a greater section of good ore will be found. The first hole was approximately 50 feet in from the outcrop where the mineralized section is 3 feet thick, the second 100 feet in and the third 150 feet in from the outcrop.

Most of the mine workings are readily accessible, especially is this true of the 180 foot tunnel as the rock formation in which the mineralized zone is found stands up with no sign of caving. Two of the shorter tunnels are open but the floors are covered with six inches of water. All other workings are readily accessible for examination purposes.

(b) Past Production: During the latter part of World War II, approximately 1,000 tons of ore were mined and shipped to the mill at Durango. This tonnage averaged 2.85% vanadium oxide, the only value reported on. All of this ore contained uranium oxide as well as vanadium oxide but there is no record or report available that discloses what the percent of the former might have been. In addition to this 1,000 tons, a few tons were mined and sold to the mill.

There is no production from the property at present and no known ore reserves.

(c) The Goodhope group of lode claims is located in the mountainous terrain of the La Plata Mountains. The formations that outcrop in the area under consideration are of sedimentary origin, ranging in age from Permian to upper Cretaceous. These formations dip at an average of 15 degrees to the south into the San Juan Basin. Northward these sedimentary beds have been cut occasionally by Tertiary intrusions, leaving mineralized zones in the limestone beds. The vanadium and uranium oxides appear to have been deposited in the upper Entrada sandstone formation simultaneously with the sand.

The vanadium-uranium ore is a roscoelite type ore, which is typically a high vanadium-low uranium primary ore. From surface observations, the mineralized section is irregular, varying from a few inches to four feet in thickness and from zero to six feet below the contact with the Todilto limestone formation above. The entrada sandstone is a highly cross-bedded formation which would suggest eolian deposition. The mineralized section appears to follow the pattern of the cross-bedding planes or "rolls". The vein outcrop can be traced continuously along the east side of the group of claims.

During the war, over 1,000 tons of ore was mined and shipped from these claims. No records are available on these shipments except that they averaged 2.85% vanadium oxide. The old workings are shallow and irregular, and offer little information as to the continuity of the ore back from the outcrop. Since uranium leaches so readily when exposed, the outcrop and the old workings are of no value for accurate sampling.

In order that the applicant may plan an efficient and economical mining operation, it is necessary to investigate the nature and tenure of the vein beyond the zone of surface leaching. It is not advisable to re-enter the tunnels that have been driven, due to economical reasons. They have been partly covered by rock slides from above and are in a hazardous position for more slides from a ditch excavation above. Also there is no longer available space for a rock waste dump. For these reasons an exploratory tunnel has been planned on Goodhope No. 1 as explained in paragraph 5(b).

Attached are four maps and/or sketches, one an areal map shows the location of the Goodhope group of claims in relation to the city of Durango and Lightner creek as well as the access roads.

Map No. 1 shows the location of the old workings, including the 180 foot tunnel on A-A', the site of the proposed exploratory tunnel, the ore outcrop and the present site of the core drilling.

Sketch No. 2 shows a cross section along A-A' on map No. 1, through the 180 foot tunnel. It illustrates why it would be both impractical and uneconomical to carry this tunnel ahead as the main or principal exploratory tunnel.

Sketch No. 3 shows a cross section on B-B' on map No. 1, along the the proposed exploratory tunnel.

(d) The Goodhope group of claims, known as the Lightner Creek group, lies approximately twelve (12) miles northwest of Durango, Colorado and can be reached over U.S. highway No. 160 to a point three miles west of Durango, thence in a northerly direction over a graded county road for a distance of six (6) miles, or to within three (3) miles of the south line of Goodhope No. 5, thence north over a private road to the property.

Distances to Shipping: The operator expects to ship all the ore mined to the Vanadium Corporation of America mill at Durango by truck, a distance of twelve (12) miles. However, some ore that may run high in uranium oxide and low in vanadium oxide will be shipped to Monticello, Utah, a distance of one hundred (100) miles, also by truck.

Supply and Residence Points: Durango, Colorado will be the supply as well as the residence point, as all employees can live there and drive back and forth from the property.

(e) Availability of Manpower: Due to the closing down of several mining properties in the Silverton, Colorado district, there will be suitable manpower available.

Materials and Supplies: Supply stores, lumber yards, hardware stores and other establishments stock the necessary materials and supplies that will be required.

Equipment: Equipment other than what can be obtained in Durango, can be purchased in Grand Junction or Denver, Colorado.

Water: There is sufficient water for all purposes in Lightner Creek that flows all year. In addition, there are several springs on the property that provide considerable water.

Power: Electric power can be secured from "The Western Colorado Power Company", who have advised that their company will construct a power line to the property for the sum of $15,000.00. This amount to be advanced by the San Juan Uranium Corporation which will be refunded through one quarter (1/4) of the monthly power bill over a period of five years or until paid out.

For the proposed exploratory operations gasoline driven motors will be used.

5. THE EXPLORATION PROJECT:

(a) See sample sheet.

(b) The proposed exploratory work consists of a 5' x 7' tunnel, to be driven in on the vein as outlined on Map No. 1. The tunnel will be run on grade following the contour of the vein as it dips to the south. Considerable money has been expended on the various tunnels and openings but none of them have been carried far enough or deep enough along the vein to give any information as to its mineral content beyond the apparent leaching zone. This proposed tunnel will be driven approximately 600 feet along the vein, which should be well beyond this zone and make it possible to evaluate the property with a great degree of accuracy.

(c) See sheet.

(d) The applicant, president and operating manager for San Juan Uranium Corporation, is a graduate mining engineer from the School of Mines, University of Minnesota, Class of 1912. He has been engaged in engineering and mining work most of his life and has served in an executive capacity in numerous mining and oil companies. The past few years he has carried on a consulting engineer's practive in Oklahoma City, Oklahoma. At present, he is located at Durango and will personally supervise the proposed exploratory work or operations.

6. ESTIMATE OF COSTS:

(a) Independent contracts: Bull dozer, road construction and repairs: $12.50 per hour - $100.00 per 8 hour day.

(b) Labor:

2 - miners) $12.00 per foot advance of 5' x 7' tunnel
2 - muckers) Guaranteed rate $1.47 and $1.39 per hour
2 - laborers - $1.25 per hour

Supervision: Foreman - $500.00 per month

Consultants: Engineer - $400.00 per month

Office Help: Clerk - $350.00 per month

(c) Operating Materials and Supplies:

Carbide - $11.35 per 100 lbs.
Explosive-Gelex 45% - $21.70 per 100 lbs in ton lots
Electric Blasting Caps - $16.85 and $18.85 per 100
Electric Wire No. 14 - 250 feet - $11.00
Mine Rail 20 lb. - $10.50 per 100 lbs.
Fish or Tie Plates - 60¢ per pair
Hand Tools: 6 picks at $3.15
6 handles at $1.30
6 shovels at $3.95
Drill Steel: 2' - $4.81
4' - $6.56
6' - $9.56
Bits - 23 1/2¢ each
Air line - $37.10 per 100 feet
Water line - $23.80 per 100 feet
Gasoline - 33 1/2¢ per gallon
Oil - $1.80 per gallon
Rock Oil - 88¢ per gallon

(d) Operating Equipment:

1 - 125 cu. ft. compressor - Jaeger New s/NC - 14945 rental purchase contract - monthly rental	$ 164.22
1 - Thor 380 sinker leg combination new rental purchase contract - montly rental	$ 76.50
1 - Water Tank for the sinker leg combination rental purchase contract - montly rental	$ 10.20
Dodge Power Wagon new owned by operator to be used transporting men and material @ 20¢ per mile	
Equipment to be purchased:	
1 - water pump - gasoline motor piston type	$ 450.00
1 - 500 gal. water tank	75.00
1 - hand forge	103.31
1 - cable conveyor and 2 buckets	600.00
1 - electric battery & detonator	60.00
4 - muck sheets	100.00
2 - 20 cu. ft. mine cars w/Temkin roller bearings	570.00

(e) None

(f) 1 - office building 12'x24' erected	$ 2,000.00
office furniture	500.00
1 - warming house for men w/stove and benches	300.00

(g) Miscellaneous:

Maintenance and Repair of Equipment	
Jaeger Compressor	$ 91.65
Thor Drill	152.75
Cable Conveyor	213.85
Assaying	611.00
Liability Insurance	470.47
Payroll Tax	329.94

(h) Contingencies:

Labor	$400.00
Operating Material & Supplies	422.00
Operating Equipment	400.00

ESTIMATED TOTAL COST OF PROJECT (totals under all headings)

6. (a) Independent Contracts:
Bull Dozer - Road Repairs
3 days at $100.00 — $ 300.00

(b) Labor:

Labor-Miners	$ 7,332.00	
Labor - Laborers	1,222.00

	$26, 141.69	$ 4,706.90	$ 42.79

7.

(b) The applicant proposes to use his Dodge Power Wagon for transporting men and materials from sources of supply (Durango, Colorado) to the project, charging the cost of operation or 20¢ per mile driven.

Estimating a mileage of 50 miles each working day will cost 50 X 20¢ equalling $10.00 or $2.00 per foot advance of the tunnel. Estimating that the tunnel will be driven 611 feet, the amount to be furnished through this piece of equipment will be 611 X $2.00 equalling $1,222.00.

Applicant is now purchasing a compressor and drill w/accessories on a rental purchase agreement so that the monthly rentals over the time the project is in progress will be applied to his cost, as neither piece of equipment will be used on any other work during this time. Rental payments are estimated to be $2.28 per foot advance of the tunnel or a total of 611 X $2.28 equally $1,393.08.

Summary of Cost of Equipment to be Used:

Dodge Power Wagon	$ 1,222.00
Compressor & Drill	1,393.08
Total	$ 2,615.08

Total to be furnished by the applicant either as cash or in use of Equipment:	$ 6,250.00
Through Use of Equipment	2,615.08
Cash that will be Furnished	$3,634.92

ASSIGNMENT OF MINING LEASE

This agreement made and entered into, in duplicate, this ____ day of March, 1954, by and between William M. Smallwood and his wife, Bettie Smallwood, of Oklahoma City, Oklahoma, hereinafter designated as Party of the First Part, and San Juan Uranium Corporation, a Delaware Corporation, hereinafter designated as Party of the Second Part.

WITNESSETH:

WHEREAS, on the 9th day of March, 1954, Party of the First Part entered into a Mining Lease with F. W. Pinkerton and Elsie A. Pinkerton, his wife; A. S. Butell and Catherine M. Butell, his wife; C. E. Linn and _____ Linn, his wife; Fred Brown, attorney - in - fact for Lloyd Zents and _____ Zents, his wife; and F. W. Pinkerton, Jr. and Carol M. Pinkerton, his wife, said lease being recorded _____, 1954, in Book _____, Page _____, in the records of La Plata County, State of Colorado, and incorporated herein as fully as though set out word for word herein.

NOW THEREFORE, in consideration of Ten Dollars ($10.00) and other good and valuable considerations, covenants and conditions hereinafter set out, the parties hereto agree as follows:

1. For and in consideration of three hundred thousand (300,000) shares of stock in the San Juan Uranium Corporation, a Delaware Corporation, and in further consideration of a payment of Twenty-five Thousand Dollars ($25,000.00), said Twenty-five Thousand Dollars ($25,000.00) to be paid within six months after the execution of this Assignment, Party of the First Part hereby agrees to convey and does convey unto Party of the Second Part Goodhope Claims No. One (1), No. Two (2), No. Four (4), No. Five (5), No. Seven (7), No. Eight (8), No. Nine (9), No. Ten (10), No. Eleven (11), No. Twelve (12), No. Thirteen (13), No. Fourteen (14), No.

Fifteen (15), No. Sixteen (16), No. Seventeen (17), No. Eighteen (18), and No. Nineteen (19).

2. For the aforementioned consideration, Party of the First Part does hereby grant to Party of the Second Part on option for eighteen (18) months to purchase Goodhope Claims No. Three (3) and No. Six (6) and Nevada Claims No. One (1), No. Two (2), No. Three (3), No. Four (4), No. Five (5), No. Six (6) and No. Seven (7) for a cash bonus of seventy-five cents (75¢) per ton ore in place, said reserve to be computed by core drilling and estimates made by a reputable mining engineer.

3. For the aforementioned consideration, covenants and agreements, Party of the First Part hereby assigns and conveys to Party of the Second Part all of his right, title and interest in and to the aforementioned and incorporated Lease and for the aforementioned consideration, Party of the Second Part hereby agrees to and does assume any and all obligations of Party of the First Part under the aforementioned and herein incorporated Mining Lease.

4. This instrument shall be binding upon or inure to the benefit of, as the case may be, the heirs, executers, administrators and assigns of Party of the First Part and the successors and assigns of Party of the Second Part .

5. The said Bettie Smallwood, wife of the said William M. Smallwood, for and in her own behalf, singly and individually, does hereby freely and fully, for the purposes and considerations mentioned in this Assignment of Mining Lease, unite and join with her husband in making the same, and singly and individually does relinquish unto said Party of the Second Part all right and claim of dower and homestead in said property until the expiration or sooner termination of this Assignment of Mining Lease.

IN WITNESS WHEREOF, Party of the First Part have hereunto affixed their signatures, and party of the Second Part has hereunto caused

its corporate name to be signed by its duly authorized officer, the day and year first above written.
