GENERAL INSTRUCTIONS

Before filling out this application, please read DMEA Order–I, Revised, "Government Aid in Defense Exploration Projects." To assure prompt action, your application must provide all applicable material and information specified on the back of this application form. Avoid unnecessary correspondence and delays by submitting complete and accurate information. *Please submit four copies of this application and all accompanying papers* except as otherwise noted. Place your name and address on each sheet. Each item of information, maps, and reports required as a part of this application is described on the back of this form. Identify each attached statement by the item number to which it applies. If an item does not apply to your application, show the item number on your statement and after it write "not applicable." Maps or sketches should be used to supplement narrative descriptions of the property location and boundaries in item 1, existing mine workings and geology in item 2, and the proposed exploration project in item 4. When this information is not too complex, all of it may be shown on one map or sketch. All documents and other attachments submitted as a part of this application, except those in item 2(g) which you mark to be returned, become the property of the Government and will not be returned to the applicant. Send true copies, *not originals*, of leases, contracts, and other documents which are an essential part of your business records. *File this application with the Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest DMEA Field Office.*

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

December 12, 1957
Dated

Jerome Jones

Owner
Title

A wilfully false statement or certification to any Department or Agency of the United States Government is a criminal offense. U. S. Code, Title 18, Sec. 1001.

INFORMATION REQUIRED WITH THIS APPLICATION

1. *Applicant's Property Rights:*

(a) State the legal description (section, township, and range; metes and bounds; patent number of claims) of the land upon which you wish to explore and all land adjacent to the proposed project area which you own or control. Describe any part of the project land or workings which should not be subject to Government lien for royalty payments. If the land consists of unpatented claims, state the book and page number for each recorded location notice, including amended locations, and the place where recorded (courthouse, recorder's office, county, and state).

(b) State all the names by which you know the property.

(c) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise. If you are not the owner, submit with this application one exact copy of the lease, contract, or other document (with address of owner) under which you control the property.

(d) Describe all liens, mortgages, or other encumbrances on the property.

2. *Physical Description:*

(a) Describe in detail and illustrate with maps or sketches all mining or exploration operations which you know have been or are being conducted upon the lands, including existing mine workings. Describe all production facilities.

(b) State your interest, if any, in operations stated in 2*(a)*.

(c) State, as far as you know, the past and current production, supporting your statement with copies of settlement sheets, mine records, or published data if available.

(d) Describe known ore reserves on the property giving quantities and grades and sampling methods used, supporting your statement with copies of assay certificates and assay maps if available.

(e) Describe by narrative and maps or sketches the geologic features of the property, including ore minerals, geologic formations if known, and type of deposit (vein, bedded, etc.).

(f) State your reasons for expecting to find ore, and if you have sampled the area you propose to explore, show where the samples were taken, describe sampling methods used, and provide copies of assay certificates.

(g) Send with your application at least *two* copies of all geologic or engineering reports, assay maps, or technologic information which you may have, indicating on each whether you require its return to you.

3. *Accessibility of Project:*

(a) To aid DMEA representatives who may be required to examine the property, state the name and address of the person who will meet the DMEA representative; give directions for reaching the property; and describe accessibility of the property including the mine workings.

(b) Name the shipping and supply points and places where employees reside and state the distances between them and the property.

4. *The Exploration Project:*

(a) Describe fully the proposed exploration project giving individual footages and sizes of openings *for each item of work.* Use narrative, maps, plans, and longitudinal and cross sections as necessary. Show the location of the proposed work as related to geologic features such as veins, ore-bearing beds, contacts of rock formations, etc. Show also the relation of the proposed work to any existing mine workings and to *property boundaries* or to the closest identifiable corner.

(b) If an access road to the project must be built, show the location on the property map and state the length, type, and construction methods proposed.

(c) In the event that an exploration contract with DMEA is executed, how soon will the work start and how many months will be required to complete it? State your anticipated average daily or monthly rate of progress for each type of work.

5. *Experience:*

State your operating experience and background with relation to your ability to carry out this exploration project, and also that of the person or persons who will supervise the operations.

6. *Estimate of Costs:*

Furnish detailed estimates of the costs *for each item of the work proposed in 4(a)* under the headings listed below with a total for each heading and the estimated total cost of the project. Costs for any work to be performed by an independent contractor should be shown separately under category *(a)* below. Costs for any work that is not to be performed by an independent contractor should be given in detail under categories *(b)* through *(g)*.

(a) Independent contracts. State the cost of any proposed independent contract for the performance of all or any part of the work, expressed in units of work, such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved. Cost estimates should be supported by bids from three contractors if possible. *(Note* – If none of the work is to be contracted, write "none" after this item.)

(b) Personal services. For necessary supervision, engineering and geological services, and labor, include an itemized schedule of numbers, classes, rates of wages, salaries or fees, and periods of employment. State whether these technicians and employees are available.

(c) Operating materials and supplies. List items of material and supplies with their cost. Include under this heading power, water, and fuel, and units of equipment and tools costing less than $50 each.

(d) Operating equipment. List items of operating equipment to be used giving specifications and indicating how each item is to be acquired – i.e., rented, purchased, or provided by the applicant. If it is rented or purchased, state the estimated rental or purchase price. If it is to be furnished by the applicant, give its present fair market value.

(e) Initial rehabilitation and repairs. Describe the type and the cost of necessary *initial* rehabilitation or repair of existing buildings, fixtures, installations (exclusive of mine workings), and movable operating equipment now owned by the applicant, which will be used on the exploration project.

(f) New buildings, fixtures, installations. Describe each building, fixed improvement, and installation to be purchased, constructed, or installed for the exploration project stating specifications and cost including labor, materials and supervision.

(g) Miscellaneous. For the operating equipment listed in 6*(d)*, describe the type and estimate the cost of repairs and maintenance expected during project operations. Do not repeat initial repairs listed in 6*(e)*. Show also the costs of analytical work, accounting, workmen's compensation and employees' liability insurance, payroll taxes, and other required costs that do not fall within the previous categories.

Note – No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. *(a)* State whether you are prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation stated in Sec. 7 of DMEA Order–I, Revised.

(b) Explain to what extent you propose to furnish your share of the costs by providing money, by use of equipment owned by you, or otherwise.

Gentlemen:

I am sending an application for aid in an exploration project with maps and sketches on separate sheets.

In my 25 years of mining and prospecting experience these claims have by far the best prospects I have ever seen.

I gave you all the information I could regarding my mining claims. If I have over looked anything I will be glad to answer any questions.

I will appreciate your interest in my project.

Yours very truly,

Jerome L. Jones

Dear Mr. Jones:

Your application for aid for an exploration project and other reports available to us in Washington concerning your application have been reviewed.

Projects approved by the Defense Minerals Exploration Administration must, in its judgment, show definite promise of yielding materials of acceptable grade in quantites that will significantly improve the mineral supply position for the National Defense Program.

Careful study of all our information, although noting a small amount of copper-lead-zinc mineralization on your property, indicates to us that the probability of disclosing significant ore reserves is not sufficiently promising to justify Government participation. We regret to advise you, under these circumstances, that your application for exploration assistance is denied.

We wish to thank you for your interest in the Defense Mineral Program and for bringing your property to our attention.

Sincerely yours,

C. O. Mittendorf

Memorandum for the Docket

From: Director, Division of Base Metals

Subject: Justification for denial of application, Docket No. DMEA-4900, Jerome L. Jones, Cinderella, et al., Claims, Chaffee County, Colorado, Lead-Zinc-Copper.

The application deals with two narrow veins in schists and gneisses, veins being about 100 feet apart. One vein seems to have an average width of about a foot, the other from a foot to a foot and a half. A couple of caved adits exist on the property.

The veins show small concentrations of copper, lead and zinc minerals, with probably some silver. However, there is little expectancy of the existance of anything of significant nature and we concur with the denial recommendations of the Field Team and the commodity members.

Probably a very small ore tonnage could be found in the sporadic quartz lenses, but nothing worthwhile.

June 26, 1958

Memorandum

To: W. R. Griswold, Defense Minerals Exploration Administration

From: T. H. Kiilsgaard, U. S. Geological Survey

Subject: Review of Field Team Report, DMEA Docket 4900 (Lead-Zinc-Copper) Cinderella et al claims, Chaffee County, Colorado

In a somewhat vaguely described exploration program, the applicant proposes to construct an access road to his exploration project and to crosscut and drift on two different veins. The cost of this program is estimated at $10,000. Field examiners report that on the property the two veins are about 100 feet apart, and that they appear to parallel foliation of the enclosing country rock and to extend for distances of several claim lengths. Average width of the vein is estimated at about 1 foot. At the outcrop, limonite and malachite are recognizable, and samples by the applicant from the outcrops are good but these samples appear to have been carefully selected; they represent no significant ore width.

The property has been explored by 2 adits, the longer of which apparently reached the vein but did not drift very far along it. The shorter adit did not reach the vein. The mine has no record of production. The examiners report that although small amounts of silver and copper may be expected at intervals along the vein, the chances are of finding significant amounts of these minerals on the Cinderella claims are negligible. They therefore recommend denial of the application. I concur with the examiners. The chances of making a significant discovery on this property by the proposed work appear to be very slight. I therefore recommend denial of the application.

Re: DMEA 4900; Lead-Zinc-Copper
$10,000
Jerome L. Jones
Cinderella claims
Chaffee County, Colo.

Memorandum

To: W. R. Griswold, DMEA

From: O. M. Bishop, USBM

Subject: Review of field examiners report dated June 4 and received Washington June 12, 1958

The field examiners have appraised a project proposal whereby Mr. Jones would repair access roads, rehabilitate two caved adits and lengthen one of them to an intersection with two shear zones that contained lenses of quartz, chalcopyrite, galena and sphalerite. The adits were caved and did not permit subsurface examination of the veins. Two surface exposures revealed two veins 1 to $1\frac{1}{2}$ feet wide that contained small amounts of metal sulfides. The dump material indicated the longer adit had encountered the vein.

The field examiners conclude the evidence does not support hopes for economic concentration along the shear zones. I agree with them. The inadequate application and hazy definition of the project suggests that a more capable applicant could have presented a stronger case for the property, therefore I recommend denial without prejudice.

JEROME L. JONES
CINDERELLA ET AL. CLAIMS
CHAFFEE COUNTY, COLORADO

INTRODUCTION

Jerome L. Jones, 916 South 21st Street, Temple, Texas, submitted an application on December 12, 1957, requesting Defense Minerals Exploration Administration aid to explore for lead, zinc, and copper at the Cinderella mine, Chaffee County, Colo.

The applicant proposes to crosscut and/or drift and to construct an access road under his exploration program. He estimates this program to cost $10,000.

The property was examined on May 22, 1958, by Frank B. Moore, Geological Survey, and Edward W. Buel, Bureau of Mines. The examiners were accompanied by the applicant, Jerome L. Jones.

The applicant was either vague or was unable to answer many of the questions put to him by the examiners concerning the property and the exploration program. In the absence of desired information, portions of this report are, at the most, sketchy.

LOCATION AND ACCESS

The Cinderella mine is in secs. 9 and 16, T. 49 N., R. 7 E., New Mexico principal meridian, Chaffee County, Colo. (fig. 1). The principal workings lie beside Green's Creek in the San Isabel National Forest and are 2-1/2 miles due south of Maysville, Colo.

The property is easily accessible from U. S. Highway 50 which joins County Highway 2, approximately 2.3 miles west of Poncha Springs. The county road is followed for nearly 2 miles to the Green's Creek road. This road which runs along the gulch of Green's Creek is passable to automobiles for another 2 to 3 miles. A bulldozer trail connects the Creek road with the underground workings of the Cinderella mine, a distance of less than one-half mile.

PHYSICAL FEATURES

The property is in an unorganized mining district which lies principally in the drainages of Willow, Green's, and Redman Creeks on the east slope of the Continental Divide. The district is occupied by deep narrow canyons and steeply sloping hillsides. Altitudes range from approximately 9,000 to 10,000 feet within a distance of a mile or less.

The climate is moderate and probably can be considered as semi-arid as evidenced by some sage brush and an occasional cactus, especially on the south slopes. Snowfall is not considered heavy at the 9,000-foot elevation allowing mining operations to be carried on throughout the year.

FIGURE 1 - LOCATION MAP OF CINDERELLA MINE, CHAFFEE COUNTY, COLO. DMEA DOCKET 4900

OFFICIAL FILE COPY
DMEA
RECEIVED JUN 12 1958

DATE		CODE

Timber, consisting primarily of pines, firs, and aspens, is erratically distributed throughout the area. Relatively thick stands of timber, suitable for mine supports, occur in some parts of the district.

Transportation facilities are readily available. A spur line of the Denver Rio Grande Western Railroad passes by the junction of the county and Green's Creek roads. Salida, about 15 miles from the property, is a major local transportation center as well as a source of mine supplies and skilled labor.

All power needs would undoubtedly be supplied by portable combustion equipment.

Water is available from Green's Creek.

PROPERTY

The applicant relocated a group of claims north and south of Green's Creek. These lode claims are recorded in the Salida Courthouse and are listed as follows:

HISTORY AND PRODUCTION

The history of the mining district and the Cinderella mine is not adequately known. From the district's position with respect to the Monarch and Marshall Pass mining districts and the condition of mining properties of the area, it is presumed that much of the exploration and development were carried on near the 1900's. The applicant, Jerome L. Jones, stated that the Bon Ton mine (L. & S.) "shipped a lot of silver ore" and that two carloads of copper ore was shipped sometime in 1934 and/or 1935. These shipments were not verified, however. It is believed that if any shipments were made from the district, they would be considered insignificant.

The applicant undoubtedly became interested in the Cinderella mine sometime after 1955 after hearing an account of a "large deposit of lead and zinc" in the mine. Since then the applicant has carried out access road building and bulldozer stripping at the two adit sites and dumps.

There is no known production or indication of any production from the Cinderella mine.

PRESENT STATUS

The Cinderella mine has been explored by two adits reported by the applicant to be 40 and 400 feet in length (fig. 2). Several shallow surface cuts also occur on the property. Of the adits, the 40-foot adit is caved at the portal and the 400-foot adit is accessible for about 300 feet. The latter adit contains several major caved areas, and it is estimated that more than 75 percent of the presently accessible adit would require clean-up and rehabilitation.

There are no surface installations on the property.

It is believed from conversations held with the applicant, that he intends to do additional exploration from the adits even if DMEA assistance is denied.

APPLICANT'S EXPLORATION PROPOSAL

The applicant's proposed exploration work is not clearly defined in his application. The applicant was questioned about his exploration proposal during the examination, and it appears that he proposes to improve a roadway to the adit sites at a cost of $600.00; to extend the 40-foot adit on the South Side claim a distance of not over 150 feet at a cost of $4,050.00; to rehabilitate the 400-foot adit on the Forsaken claim at a cost of $1,200.00 to $1,500.00; and to construct a repair shop 18 x 20

FIGURE 2.--SKETCH SHOWING RELATIONSHIP OF ADITS TO VEINS, CINDERELLA CLAIMS PROPOSED EXPLORATION AREA.

CHRONOLOGICAL COPY
DMEA
RECEIVED JUN 12 1958

DATE	[illegible]	CODE

feet at a cost of $750.00. The total cost of this work is $6,900.00, but the applicant estimates the cost to be $10,000.00. Because the applicant states in his application that he will provide the supervision, it is presumed that the difference of $3,100.00 would be his salary and/or incidentals.

GEOLOGY

Precambrian schists and gneisses with associated variants--lime silicate gneiss, garnetiferous gneiss, amphibolite--comprise the country rock at the Cinderella and nearby claims. The strike of the foliation is northerly, and dips are 55 to 75° southeast.

Two veins, about 100 feet apart, appear to parallel the foliation for distances of several claim lengths. The eastern vein is exposed in several pits and consists of sheared rock with lenses of chalcopyrite-bearing quartz. Malachite and some limonite are present. The average width of the vein is estimated to be 1 foot. The western vein is not exposed but has been prospected by numerous small pits and can be followed by an "iron capping" on the surface. It is estimated to be 1 to 1-1/2 feet wide with limonite and malachite the only recognizable minerals. The capping is reported by the applicant to contain some copper.

Samples taken by the applicant were mostly from surface outcroppings. Although the grade is generally good, the samples are of selected material and represent no significant width.

The veins are not exposed in the area proposed for exploration. One adit on the Forsaken claim trends N 60° W from Green's Creek and is reported to be 350 to 400 feet in length. It is caved at 300 feet. A small amount of vein material on the end of the dump indicates that the eastern vein was cut but not followed. The vein material consists of quartz with minor amounts of chalcopyrite, galena, and sphalerite. The "pay streak" of the vein is probably only a few inches wide. A second adit, about 330 feet southwest of the first, is driven southeast from Green's Creek on the South Side lode. It is caved at the portal but is reportedly 40 feet long. It failed to reach either vein.

The Bon Ton mine, presumed by the applicant to be on a northern extension of the eastern vein, has yielded small amounts of silver and copper ore; no other production from this area is known or reported. Several dumps from workings near the Bon Ton contain but little vein material. Several mines are reported by the applicant to be on the same lode south of and 1,500 feet above Green's Creek. Production from those mines is probably small. The general weakness of the vein and certain structural inconsistencies noted during the examination indicate that the Bon Ton mine and possibly others to the south may not be on the same structure. However, inadequate maps are available to prove or disprove this belief.

CONCLUSIONS AND RECOMMENDATIONS

Small amounts of silver and copper occur in faults and/or iron-rich layers along the foliation of Precambrian gneiss and schist. The copper occurs as chalcopyrite in narrow quartz lenses; the silver minerals or the mode of their occurrence is unknown. Production from the area has been small.

Because there appears to be little chance of finding more than minor amounts of lead, zinc, or copper in the Cinderella claims area, it is recommended that the application be denied.

Dear Mr. King:

I am now prepared to carry the entire costs for a period of from 60 to 90 days or until the Government's first reimbursement's has been made on my mining project cited above.

I wish to state that instead of the previous report on my mining equipment availabe now consists of:

1 105 CFM Schramm Compressor
1 Thor Jackleg
1 Joy Model 47 Rock Drill
1 Atlas R656 Rock Drill
2 Ingersoll-Rand Tuggers (Suitable For Slushing)
1 Gardner Denver CF 89 With Sectional Steel
(If Needed For Deep Hole Drilling)
2 Tram Cars: Enough Rails To Complete The Job
1 Dodge 2 Ton Truck
1 Dodge Power Wagon

Also have drill steel, hoses, bits, water tanks, air receivers and other equipment needed. Carry Insurance and State Compensation.

Your very truly,

Jerome L. Jones

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 4900 (Lead-Zinc-Copper) Jerome L. Jones (Cinderella et. al. claims) Chaffee County, Colorado

Enclosed is the following material relating to the subject docket.

1. A copy of an application for Government assistance in Exploration work under the DMEA program.

2. Memorandum of Review by O. M. Bishop, USBM.

3. Memorandum of Review by N. E. Nelson, USGS.

4. Letter of transmittal of the foregoing to this office dated January 22, 1958, from the Chairman, Operating Committee, DMEA.

5. A copy of a letter from the applicant to W. R. Griswold dated January 10, 1958.

6. A copy of a letter from the applicant to the Executive Officer dated March 5, 1958.

7. Routing Control Sheet.

A field examination of the property and a joint report of findings and recommendations pertaining to the applicant's work proposal are requested.

If the field examiners recommend Government participation in the proposed exploration program, please submit 11 extra copies of each map used in the joint report which show the land to be subordinated and the location and extent of recommended work, relative to property boundaries.

The Routing Control Sheet is to be completed, detached from the application, and forwarded to the Executive Officer with the joint examination report.

Re: Docket No. DMEA 4900
(Lead-Zinc-Copper)
Jerome L. Jones
(Cinderella, et al., claims)
Chaffee County, Colorado

Dear Mr. Jones:

Your application for DMEA aid on the captioned property has been referred to this office. Before additional expense is incurred in the further processing of your application by a field examination we need clarification from you regarding your responsibility for your proportionate share of the financing.

The Operator of a DMEA Contract is reimbursed for the Government's proportionate share of the accepted expense of operation on a monthly basis. The Operator submits a statement of costs on forms which are provided at the end of each month. The work will be inspected each month and if the work has been completed within the terms of the contract the Operator will be reimbursed for the Government's proportionate share. It is frequently necessary for a new Operator to supply additional information before his first Voucher can be processed for payment. Therefore, the Operator should be prepared to carry the entire costs for a period of from 60 to 90 days, or until such time as the Government's first reimbursement has been made.

Will you please advise if you are in a position to finance your share of the expense involved in an exploration project such as you have outlined in your DMEA application.

Yours very truly,

Kiilsgaard

Dear Mr. King:

The cited application is being referred to your office for consideration, a field examination of the property if warranted, and recommendations. Copies of memoranda dated December 23 and 30, 1957, by N.E. Nelson, Geological Survey, and O. M. Bishop, Bureau of Mines, respectively, relating to the project are enclosed for your information. We are also enclosing three copies of the application for the use of the Field Team.

Before you authorize the necessary expense of a field examination you should obtain some assurance that the Applicant is in a position to finance his share of the expense involved in such a project. We wrote Mr. Jones on January 6, 1958, to such effect and he replied on January 10 (copies enclosed) stating that he owned certain items of equipment. If, in addition to furnishing equipment, he planned to also furnish his own labor, such a contribution might be adequate for a small project. But since he states in his application "I intend to supervise the project" and also speaks of contracting the work, it would appear that he must be prepared to assume responsibility for a proportionate share of the financing. If he is unable or unwilling to do so, there would be little purpose of going to the expense of a field examination.

Sincerely yours,

George C. Selfridge

Cinderella, et al., claims
Chaffee County, Colorado

Dear Mr. Jones:

This is with reference to your application for Government assistance in an exploration project on the Cinderella claim group, which you estimate will cost ten thousand dollars.

Before we refer your application to the Field Team will you kindly clear up one point for us. Item 7(b) of the application form states:

"7(b) Explain to what extent you propose to furnish your share of the costs by providing money, by use of equipment owned by you, or otherwise."

You answered this inquiry as follows:

"Ownership of my claims".

In projects of this sort the Government could only participate to the extent of one half ($\frac{1}{2}$) of the approved costs, hence you should be prepared to finance half of such sum. If you are prepared to do so please advise us and we will proceed with processing your application. Meanwhile it will be held pending.

Sincerely yours,

W. R. Griswold

Re: DMEA 4900; Pb-Zn-Cu; $10,000
Jerome L. Jones
Salida Mine
Chaffee County, Colo.

Memorandum

To: W. R. Griswold, DMEA

From: O. M. Bishop, USBM

Subject: Review of application of December 12, 1957

The applicant owns 14 lode claims in Chaffee County, Colorado which he reports contain several veins carrying lead, zinc, and copper. Mr. Jones has opened the portals of 2 adits and sampled old dumps and underground mineral exposures. On the basis of this investigation he believes further exploration justified and requests DMEA assistance in opening old workings on the South Side and Forsaken Claims and doing unspecified other work.

I recommend that the application be referred to the field team for review and examination, preferably in company with Mr. Jones so that work proposed can be reviewed and evaluated.

December 23, 1957
Re: DMEA 4900
Jerome L. Jones
Cinderella Mine
Chaffee County, Colorado
$10,000.00 - Lead-zinc-copper

Memorandum

To: W. R. Griswold, Defense Minerals Exploration Administration

From: N. E. Nelson, U. S. Geological Survey

Subject: Review of application

The applicant requests assistance in exploring 2 lodes by crosscutting and drifting, and rehabilitation of an old adit. The crosscut on the South Side lode claim, as estimated, would not exceed 150 feet in length.

No estimate is made of length of the runaround required to by-pass the cave-in in the Forsaken adit. The old work appears to have been done many years ago. If there was production, there is no record of it available to the applicant.

The applicant took several samples showing good values in lead and zinc and copper. No widths are ascribed to the samples. Copper is the principal metal assayed for.

Referral of the application to the Field Team is recommended.
