PUBLIC VOUCHER FOR REFUNDS

Voucher No. 93749

U. S. Interior, Geological Survey
(Department or Establishment, Bureau or Office)

Location: Washington, D. C. 20242

Appropriation or Fund: 14X6875(08)

PAID BY

To
Address
Beardsley Gulch Mining Company, Inc.
King Street Dock
Burlington, Vermont 05401

Withheld ~~Deposited~~ from the above-named ~~depositor~~ on December 10, 1968

for pending submission of final report on Contract #2219, Docket No. 6495

has been applied as herein stated and the balance indicated is returned herewith:

Amount withheld ~~deposit~~ Sch #93458 $ 200.00

Applied as explained in "Remarks" below

Balance authorized to be refunded $ 200.00

Remarks:
Acceptable final report has been received per memo from Chief, Office of Minerals Exploration, 12/23/68.

Approved by OME Executive Officer or Alternate:

Signature [illegible] Title Field Officer, Region I Date NOV 20 1968

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ Three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Government Representative

Date NOV 20 1968

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Contract 2219

Operator's Report for September 16 to and through October 14, 1968

The work done during this period is illustrated by the two attached maps by D. P. Wheeler and T. Q. Morris.

Work under this contract is now terminated and in the final report Wheeler and Morris will more fully illustrate the project work in order to compare ore and mineralization found with ore and mineralization expected. We will try to arrive at reasonable estimates of tonnages and grade, but the positive ore will be small in tonnage because of erratic behavior of ore in detail. In a broader scale we believe that certain controls such as bedding, lithologic contacts and K7 veins or K7 fault zone will prevail and that probable and possible ore reserves should be far more encouraging than positive ore in such deposits.

Crosscut #1 (1X-C) was advanced 58 feet in this report interval. The crosscut almost immediately turned into a drift on ore which curved eastward and appeared to pinch out about 17 feet from the face. A pod of rich ore was encountered near the face which appears to plunge gently SE and it may be that ore continues in a northerly direction off in the NNW wall of the heading. This will be explored by longholing. To date this 117 - 1X-C ore body has yielded in the process of exploration 204 mine cars of direct shipping ore whose samples average (weighted) 32.9 ounces per ton (silver) and 10.2% lead. Zinc averages 7.78% and gold averages 0.023 ounces per ton, both arithmetical averages. (The mine cars hold approximately one short ton.)

The 12 foot long spur out to the NW out of 65 NE slusher raise appears to be cutting into the top of mineralization that could be mill ore and may be the top of the mill grade ore that was cut in the main raise at 60 to 75 feet. Also there is a chance that said mineralization is the top of the mill ore shown in the section of 65 SW slusher raise. This 65 level work was disappointing, but not negative. There is still a chance that it is part of a Hoffman type ore zone trending westward which will climb up and connect to the 105 to 110 level mineralization under the Ramshorn slate.

All of the slusher drifts and raises out of the Stage II raise are in mineralization that is below milling grade except in spots. Such mineralization including minor low grade mineralization from the 117 - 1X-C ore body averages about 6 ounces silver and 3% lead. Considering the high degree of oxidation, with consequent low mill recovery, this material is not considered mill ore although it was stockpiled as such.

As of October 25, 1968, Beardsley Gulch had shipped 180 tons of ore to East Helena Smelter, Montana. Royalties to OME will be paid promptly as smelter settlements arrive in Burlington, Vermont. We hope to continue shipping ore in the 30 to 40 ounces silver and 10 to 12.5% lead grade range through the winter.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three ~~parts~~ of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report 4
Beardsley Gulch Mining Company, Inc.
GSE 6495 (Silver)
Contract 2219

Operator's Report for August and through September 15, 1968

The work done during this period is illustrated by the two attached maps by Wheeler and Morris.

Crescent #1 (IX-C) was driven 32 feet west-northwest and promptly turned into a drift following roughly stratiform ore striking more northerly and dipping 25 to 35 degrees easterly. The ore appears to have roughly the same strike and dip as the interbedded shale below it stratigraphically. The face was still in good ore at the end of this report period, and IX-C is being turned more nearly north to keep well within the ore without getting away from the footwall.

On the 65 level of Stage II raise we advanced a total of 32 feet north easterly (along 65 NE slusher drift-raise) in what appears to be low grade mill ore. A spur slusher crescent will need to run out of this workings in order to crescent longhole #37 and to prospect for an evident northerly striking vein mapped by Wheeler when the Stage II raise was run. After that is done the mineralization in longhole #35 will to explored by slusher raise following hole 35. The work remaining is indicated by dashed lines on the attached map.

We expect to make our first ore shipment in about a week. We are waiting, however, for assay returns on the ore dumped on the ore slides. (See attached sample sheet---the assay returns will be forwarded when they are available.)

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three ~~parts~~ of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Mr. D. R. MacLaren, Field Officer
OME, Region I
U. S. Geological Survey
U. S. Court House, Room 656
West 920 Riverside Avenue
Spokane, Washington 99201

Dear Mr. MacLaren:

Enclosed please find our report and maps for the interval June and July. The filled-out form progress reports and vouchers with back-up certified receipts from Burlington, which are still needed, will be sent to you next Tuesday or Wednesday.

I am sending the report and maps now in order to have a better chance to catch you in your office and thereby bring you up to date as soon as possible.

Our longhole drilling has dictated that we extend 1 X-C approximately N 70° W, as indicated by pencil on the map, 40' to crosscut the apparent ore trend X suggested by longholes 25 and 28.

Yours very truly,

Dooley P. Wheeler Jr.

Dear Dooley: Re: OME 6495 (Beardsley)

Please find enclosed the following:

Original and four copies of Umont Mining bills for accounting and office expenses during June and July 1968

Five certified copies of payroll of T. Q. Morris

Our Workman's Compensation rate for the State of Idaho is now $7.18 per $100.00 remuneration under the Idaho State Fund.

Our Unemployment Insurance rate for the State of Idaho is 2.7%.

We are sending five additional copies of this letter to you so that you may send them along to OME if further evidence is needed.

I hereby certify the foregoing to be a true statement of the facts.

Stage III
Report 3
Beardsley Gulch Mining Company, Inc.
OME 6495 (Silver)
Contract 2219

Operator's Report for June and July, 1968

During this period 117 drift SW was driven from 55 feet to 107 feet along K 7 fault zone. No mineralization was encountered and the drift was stopped 96 feet from the end line of the Hood patent Claim. Consequently, the 1st 4 feet of the drift were not charged to the OME contract. See attached map.

Nine long holes, totalling 260 feet, were drilled to explore the walls of the 117 drift SW and area. These are shown on the attached map. Holes 24A and 28 indicate an ore zone from 10 to more than 15 feet wide bearing East - West out ahead of 1X - C in a Northwesterly direction about 15 feet. In the process of drilling hole no. 25 the stratiform ore dipping gently northeast but in 1X - C north west of the main strand of K 7 fault was found to be high grade, but still dipping gently northeast. Consequently the long hole went over the top of this ore.

There is a suggestion that hole no. 20 may have been close under a manto - like ore occurrance dipping about 25° eastward and striking N 10° - 20° W. Thus it is advisable to drive 1X - C on approximately N 70° W to explore the roughly E — W ore hit in holes no. 24A and no. 28.

Long holes nos. 19, 29, 30, 31, 32 and 33 were drilled from the 105 foot level of Stage 11 raise. See attached map. Holes 19 & 29, S 70° & 66° W respectively, drilled in the hanging wall part of the main strand of K 7 vein, were inconclusive. There are sufficiently high percentages of quartz and copper, lead and " black heavy sand", probably oxidized pyrite, to suggest that a Hoffman Type manto may be out there. Hole no. 30, drilled N35° E into the hanging wall of K 7 showed weaker quartz and no lead or copper; so the Hoffman manto, if present in this area, is evidently to the West and Southwest of the raise. Hole no. 31, drilled northerly, was in mineralized dolomite for 10 feet and then into Ramshorn Slate; this hole was stopped at 15 feet, in slate. Holes nos. 32 & 33 went into the footwall of K 7 vein and indicate mill ore starting about 5 feet in the footwall trending N 20° E at least 7 feet wide. Hole no. 33 established the presence of such mineralization out for at least 25 feet. Broken ground caused us to lose hole no. 32 at 13½ feet and forces us to stop hole no. 33 at about 26 feet from the edge of the raise.

Although drilling from 105 feet was definitely encouraging we decided to drop down to the better ore exposed in the raise at the 60 to 75 foot level and long hole that area before doing further slusher drifting from the raise. We feel that longholing and slusher drifting from the 65 foot level will be more likely to lead to production of direct shipping ore sooner than at the 105 foot level; also, the work at the 65 foot level may establish continuity between the ore on the 65 foot level and that at the 105 foot level, as shown on Figure 1 and 2 of Wheeler's letter of March 5, 1968 to Mr. Kirkemo. Longholing, to date, on the 65 foot level tends to confirm this and to indicate mill

OME 6495 (Silver)
Contract 2219
Stage III
Report 3 (cont'd)

or direct shilling ore to the north and southwest, both in the hanging-wall of K 7 vein.

According to our vouchers we have approximately $6375.00 left under the OME contract which we hope to finish in August and September in the following way:

1. Extend 1X - C north - northeast from the present face for 40 feet or more. (Costing about $2000.00.)

2. Drill one 25 to 30 foot long hole into the footwall of K 7 vein from the 65 foot level of Stage II raise; drill 20 foot long holes, at about plus 70°, ENEasterly, into the back of the present 1X - C and at 20 feet and 40 feet in the new extension of this X - C. Also, drill ahead of the face at the end of the 40 foot new extension and to the SW and NE. (180 to 200 feet costing $200.00.)

3. Drive a slusher drift northerly out of the NE corner of Stage II raise from the 60 - 68 foot interval for about 30 feet. Drive a slusher drift or raise SW out of the same raise at the 65 to 75 foot interval along the hanging wall of K 7 vein for about 30 feet. Both workings to explore ore indicated in long holes. (Cost about $1800.00).

4. This will leave a balance of $2400.00 for more formal drifting in 117 area or in the Stage II raise at the 60 - 75 foot interval or possibly at the 105 foot level as geology dictates.

Approved by OME Executive Officer or Alternate:

Signature O.R. MacKaren Title Field Officer, Region I Date JUL 12 1968

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Stage III
Report 2
Beardsley Gulch Mining Company, Inc.
OME 6495 (Silver)
Contract 2219

Operator's Report for April and May, 1968

During April and May drift 117 SW was driven from 43 feet to 55 feet, a total of twelve feet along the K7 fault zone. No more manto ore was encountered and the face at 55 feet SW from the reference point on the NE side of 1X-C was in waste. We are following a strand of K7 fault southwestward back to the main strand of K7. The drift will be driven southwest to a point 93 feet from the reference point and stopped there 100 feet from the end line of the Hood claim. The balance of the 100 feet allowed, or 50 feet, will be used to follow the best stratiform ore northward or northwestward.

As of the end of May 103 feet of longholing had been done exploring mineralized and barren walls of the Stage I slusher drift 153.5 feet up the raise from K7 level. Mineralization was established by longholing for 25 feet SW and NW out of the slusher drift and slusher drift 148 SW was driven 30 feet on the best mineralization and 148 NE was driven 28 feet NE on the best mineralization. The attached assay sheet shows the grade of ore as cut by channel sample and grab sample taken from the muck of each round. Both slusher drifts are low grade mill ore at best. The map shows the location of samples 801 to 816, inclusive.

Progress has been slow because of contractor equipment break downs and his inability to get more than one good miner. We expect, however, that he will remedy those problems early in June. In spite of the slow progress supervision has been a full time job during April and May.

Approved by OME Executive Officer or Alternate:

Signature D R MacKaren Title Field Officer, Region 1 Date FEB 23 1968

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report #16
Beardsley Gulch Mining Company, Inc.
OME 6495
Contract 2219

Operator's Report for January 1968

At the beginning of January the raise from K7 level to the slusher drift, 153.5 feet above, slope distance, had advanced 114 feet timbered and on January 12 at 10 PM it connected through to the slusher drift where expected. The raise was completely timbered, drawn dry, and cleaned down by 6 PM January 14. As completed there are 153 feet of timbered raise. At the top 0.5 feet the raise was left untimbered. Timbering means 8" x8" stulls spaced about 5 feet apart up the raise and 3" lagging between stulls on the chute side, separating manway from chute side, plus ladders and timber slide and 4' x 6" stulls for pipe and safety platform supports. The 8" x 8" and 4" x 6" stulls are spaced at the same level every 5 feet in the raise and the safety platforms are spaced 20 feet apart.

In January we drove two six foot rounds ahead on the best mineralized hanging wall strand of K7 fault out of the west corner of the 117 drift spur going SW out of number one crosscut (1X-C). This was done after preliminary probe burn rounds indicated the best structure to follow southwest.

The 1" = 20' section of the raise shows the geology and sample location of the completed raise and the 1" = 50' plan and projection complete the picture. Please compare this with a preliminary vertical projection of K7 vein drawn by me 5-15-67. The 1967 projection and section is geologically about right but appears to be economically optimistic. If the raise went up on the SW or NE side of ore shoots in the vertical zone through which the 1967 section SS' is drawn we could still have substantial ore on one side or the other of the raise at the top, footwall contact, of the raise; 2/3rds of the way up the raise at the hanging wall contact; and 60 to 75 feet up the raise. Even the rich pod of ore in the first seven feet of the raise may be part of an ore body under the track which has formed an oxidation-collapse cave going southeast along the crestal part of a roll in the bedding.

At this stage we must follow ore mineralization out of the raise by slusher drifting and raising to establish whether we are on the SW or NE edge of an ore shoot, or even the SE end of an ore shoot in the case of the 60 - 75 foot interval and the 95 - 105 foot interval. At 140 to 153.5 and 95 to 105 feet slusher drifts or gentle raises should go both SW and NE on the best ore mineralization and at 60 - 75 feet similar slusher working should follow the best ore near its bottom no matter where it goes. In the 60 - 75 foot interval the ore appears to be on a north trending steep fault which rolls over parallel to bedding at the top. Such ore controls are known in the Hoffman mine and in the Silver Greek, Hoosier, Northern Star, and Ramshorn mines of Bayhorse district.

In the slusher drifts we propose to follow ore mineralization as long as it remains as good as it was to start or improves, and we propose to stop workings if said mineralization pinches or dies out. We propose to follow mineralization in the above places as long as it is ore grade unless we are confronted with the problem of whether to follow marginal ore or higher grade ore somewhere else, in which case the higher grade ore will be followed, until the balance of the OME contract funds are used up.

It looks feasable to start on wide ore assaying 11.8 to 18.9 ounce silver per ton with 2.2 to 7.3% lead at the 60 to 75 foot interval and narrow ore (2' wide) assaying 6.1 to 12.4 ounces silver and 4.4 to 13.7% lead at the 140 to 153.5 foot interval. Both occurrences are marginal but they could improve with careful exploration. At the 95 to 105 foot interval we will start on bedded Hoffman-type mineralization under slate cap rock, assaying (#755) 1.7 ounce silver and 0.4% lead over a 5' width that could improve either to the SW or NE and eventually turn into a Hoffman-type ore body that goes west up under the mountain in the Hoffman shatter zone. The raise is in the shatter zone, but since the raise is only 5 feet wide and the zone is at least 50 feet wide the raise may be in a near-miss position.

We propose to start our slusher drifting at the top of the raise and retreat down the raise to the bottom, even, possibly, following southwestward the pod-like occurrence of ore 5 feet up the raise where it assays 54.9 ounces silver per ton and 9.8% lead over a 2 foot width. The raise will be left in good shape for mining. At the same time work is being done in the raise we propose following the ore southwest in the 1X-C area.

Our work to date in the 1X-C area has exposed ore averaging 2.3 feet thick and 38.6 ounces silver per ton and 21.1% lead over a strike length of about 25 feet. We believe this also offers a good possibility for exploration that will lead to production. We propose that this drifting be continued to the southwest as long as we are in ore and/or promising mineralization and that we be allowed to do required longholing and crosscutting designed to find and/or follow better ore. Theoretically, stratiform mineralization could go into the hanging wall of the K7 fault zone and develop best at the broad band containing the 20 degree change of strike of the dolomite formation northwest of the fault zone near the base of the Pacific ore horizon. Refer to 1" = 50' plan map. The work in 1X-C area supports the theory because it exposed a strong tendency for stratiform ore (Pacific mine type) to occur on the hanging wall side of the K7 fault zone, or northwest of the fault zone.

Amendment 5 granted an extension to the OME contract time from January 14 to July 14, 1968, and permits suspension of work under the contract from January 1 to April 1. We have suspended work effective starting January 15 and expect to be working again on the project March 16, 1968.

The attached Forms MME 60 and 61 for January show a total of $32,246.97 spent to date under this OME contract of which no more than $31,636.85 is payable because of an error in allocating supervision and accounting costs. The balance under the contract is therefore (44,680 less 31,637.00) at least $13,043.00 which by separate letter we are pointing out where this money would come from and where we would like to have it apply on a final and most promising exploration effort to get this exploration project into silver production through a development phase that would naturally follow.

If this final part of Stage II exploration indicates the advisability of a Stage III in order to find new reserves of silver ore beyond those that we believe Stages I and II will have found, we will request that the contract sum be enlarged and a Stage III added.

Approved by OME Executive Officer or Alternate:

Signature D.R. MacBaren Title Field Officer, Region I Date JAN 12 1968

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report #15
Beardsley Gulch Mining Company, Inc.
OME 6495
Contract 2219

Operator's Report for December 1967

During the month of December the raise from K7 level to the slusher drift advanced from 40 feet above the level to 120 feet slope distance above the level--an advance of 80 feet for the month. Timbering was completed to 114 feet, linear slope distance, above the level; so we are claiming only 74 feet in forms 60 and 61 attached. We also drove six longholes out of the raise, numbers 9 through 14, for a total of 108 feet. Channel samples and car samples totalling 25 in number were taken and assayed. The assay results for samples 730 to 743, inclusive, were submitted with the report for November and the assay results for 744 to 755, inclusive, are enclosed.

The enclosed 1" = 20' section of the raise shows the raise complete as of the end of December including geology, samples, and longhole locations. If our transit survey is correct we have 37 feet, slope distance, to go in order to connect to the Stage I slusher drift.

Our best mineralization to date is from 60 to 75 feet up the raise as shown by channel samples 741 and 742 and car (raise round) samples 747, 748 and 749. Sample 755 which was cut in the back (hanging wall side) of the raise at 114 to 119 feet is across a manto-like occurrence of milk quartz in the hanging wall of K7 fault-vein under the Ramshorn slate cap rock. Both sample 742 and 755 occurrences are of the Hoffman stope type, but 755 is where the best ore was expected instead of 742. Since our intercepts were essentially two dimentional we will not know whether we have a mineable ore body without 25 to 50 feet of slusher drifting or raising on these showings. The same may be true of the known mineralization above us in the raise.

During December Beardsley Gulch at its own expense ran dog hole burn cut rounds SW out of crosscut #1 and out of the face of 117 drift SW, out of crosscut #1, following the best mineralization. The 117 dog hole got out of encouraging mineralization, but the crosscut #1 dog hole got into greatly improved mineralization of ore grade. This mineralization strikes about S 45° W and looks like an inverted trough which is rising and widening to the southwest. A crosscut-drift starting S 60° W out of the west corner of 117 drift SW would connect to this mineralization in one round about 10 feet ahead of the present dog hole face, make a workable workings and would permit this ore body to be explored SW towards the base of the Pacific ore horizon and the interbedded slate.

Considering the developments in crosscut #1 and the raise, under separate cover, I am requesting a six month extension of the contract in order to accomplish the following:

1. Make sure we do not run out of time before we finish the raise.

2. Allow for a forced shutdown of a month or two (+) due to severe winter conditions.

3. Allow for slusher drift and/or lateral raise exploration of three showings of mineralization in the present timbered raise.

4. Allow for drift and crosscut exploration of the ore in crosscut #1.

All four objectives would be accomplished within the contract price of $44,680 for I expect we will have about $12,000 left when the current raise is finished. This should allow for about 150 feet of slusher drifting and/or lateral raising out of the present raise and 100 feet of drifts and crosscuts out of the face of 117 drift SW.x All of the proposed new work would be restricted to following mineralization such as quartz-galena-copper-zinc with its associated silver and gold. I say gold now because we are getting up to about $3.00 per ton gold content in some of our samples.

Dooley P. Wheeler, Jr.

Dooley P. Wheeler, Jr.
General Manager
January 4, 1968

x This could be done for 49.75 per linear foot if no vent tube is required and if we are permitted to use 3" water pipe when we run out of 1" main pipe. The raise when connected through will give plenty of natural ventilation when combined with the natural air circulation in the shattered dolomite.

Certification by Government Representative:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating an exploration project in accordance with the terms of Contract No. 2219

Signature D R McLaren Title Field Officer, Region I Date DEC 21 1967

Approved by OME Executive Officer or Alternate:

Signature D R McLaren Title Field Officer, Region I Date DEC 21 1967

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Dear Dooley: Re: OME 6495 (Beardsley)

Please find enclosed the following:

Original and four copies of Umont Mining bill for accounting and office expenses during November 1967

Original and four copies of Challis Transportation Company invoice dated 12/1/67 in the amount of $63.00

Original and four copies of Challis Transportation Company invoice dated 12/1/67 in the amount of $1,843.65

Five certified copies of payroll

Our Workman's Compensation rate for the State of Idaho is now $1.81 per $100.00 remuneration in accordance with Insurance Company of North America Policy No. WC 649219 now in effect.

Our Unemployment Insurance rate for the State of Utah is 2.3%. There are no FICA contributions due for the month of November.

We are sending five additional copies of this letter to you so that you may send them along to OME if further evidence is needed.

I hereby certify the foregoing to be a true statement of the facts.

Report #14
Beardsley Gulch Mining Company, Inc.
OME - 6495 (Silver)
Contract 2219

Operator's Report for November, 1967

During the month of November 39 feet of drift was timbered, a raise chute put in and the Stage II raise to the slusher drift was advanced 40 feet above the top of the drift sets in Stage II drift. Longholes 7 and 8 were driven 20 feet southeast and northwest, respectively, out of the raise 25 feet up the raise.

Twenty feet of drift was timbered starting at the raise 20 feet southwest of survey point 18 and stopping 40 feet southwest of 18. Nine feet of drift was timbered under the Stage II raise and ten feet of drift was timbered in the interval 10 to 20 feet southwest of Stage II raise.

The raise started on rich ore about a foot wide. At 5 feet the ore had increased to two feet wide and looked the same, assaying 0.01 ounces Au per ton, 54.9 ounces Ag per ton, 9.8% lead, 1.44% copper and 5.3% zinc. The ore pinched out entirely at 8 feet and from there on up to 40 feet, or months end, K7 fault and its strands were essentially barren with little more than trace amounts of minerals except for iron stained, sheared, and brecciated tight dolomite.

During the month of December as of the 8th the prospect for a commercial silver ore body to westward from 1X-C area has been improved by oversized burn rounds and six foot probes by drill steel into the walls. The raise at 50 feet above the sill got into highly siliceous shattered dolomite from barren rusty dolomite below. At 60 feet the silicification had increased in extent to include all of the 5' X 10' raise and twelve feet (8' on NE side and 4' on SE end) constituting about the ESE one-third of the raise was copper stained and mineralized with silver, lead, zinc, copper. That portion of the raise has white to buff iron atained banded quartz whose bands strike N 20° E and dip vertically. This mineralization increased in richness upward and extends an unknown distance into the footwall of the raise and NNE and SSW but at 75 feet it cut off abruptly upward and appeared to roll over and roughly parallel the bedding, as shown in the attached section. Channel samples eight and six feet long, respectively, cut horizontally in the ore at 65 and 70 feet average .08 oz Au, 15.4 oz Ag, 4.7% Pb and 3.5% Zn.

Longhole drilling at 76 feet into both walls failed to find the ore and longhole drilling at 50 and 25 feet up the raise failed to detect ore. All the longholing has done to date is to establish that we are staying in the K7 fault zone and are probably near the center of it. The longholes are plotted on the attached section. The cuttings for each 5 foot interval are saved and a fraction of each interval has been restudied by panning and hand lens to make sure that ore mineralization is not missed.

Yours very truly,

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS (Cont.)

REMARKS (Cont.)

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report #13
Beardsley Gulch Mining Company, Inc.
OME - 6495 (Silver)
Contract 2219

Operator's Report for October 1967

During the month of October Stage II drifting and crosscutting was extended from 109 feet to 225.25 feet, for a month total of 116.25 feet. In this work there was 61.25 feet of drifting, and 55 feet of crosscutting on the K7 vein and fault zone.

The attached map shows crosscut #1 (1X-C) going west-southwest out of the original Stage II drift, at about 117 feet from the start, from the footwall strand of the K7 fault zone. The main strand was cut by 1X-C at 20 feet and the final strand (hanging wall) strand was cut at 40 feet. From the main strand on for 20 feet mineralization was good but below ore grade, unsorted. Drifting was resumed on the main strand of K7. This part of the drift is called 117 drift, and measurements start at 117. This drift was driven 19.25 feet in the strongest mineralization to date. The attached map also shows crosscut #2 (2X-C) driven out along longhole #6 (LH #6) to explore showings of silver-copper ore. This crosscut was driven 14 feet and demonstrated that a pod of partly oxidized tetrahedrite encountered at 3 feet had salted the hole for 10 feet. The main strand of K7 was cut at 7.5 feet in 2X-C, but had only sparse blebs of steel galena in brown sheared dolomite.

On October 6 longhole #4 was deepened from 26 feet to 41 feet, drilled westward plus 20 degrees; longhole #5 was deepened from 10 to 26 feet S 5° E plus 20 degrees; and longhole #6 was drilled N 55° W plus 20 degrees for 26 feet. The longholing is plotted on the attached map and was done to double check the geologic reasoning which dictated that 1X-C should go WNW where it is now shown. Hole #6 was also to make sure that the raise to the slusher drift could be started out of the original drift on the richest showing of silver ore. Longhole #6 indicated silver ore in the wall to the NW but 2X-C demonstrated that the results were missleading. LH #6 plus 2X-C fortified the reasoning behind the selection of the present raise location, and found the main strand of K7 which will be in the NW end of the raise.

Assay sample numbers corresponding to the attached assay receipts are plotted on the attached map and the locations are described on the receipts. Car samples of each round have been taken for all rounds pulled whether drift or crosscut, but not all samples have been assayed because many were obviously barren. Drift car samples with prime numbers 1 to 19, inclusive, representing every other drift round from 0 to 108.5 feet were assayed for gold, silver, lead, and zinc just to make sure that we are missing nothing, especially gold and silver. Since then only obvious potential silver mineralization is assayed.

Samples #9 and #11 which are car samples taken in the vicinity of the raise to the slusher drift above were surprisingly low grade considering the ore visible in the back of the drift. Evidently such ore did not extend down into the drift. The mineralization in the back at 56 to 65 feet is 1' to 2' wide and obviously high grade over the 1' to 2' vein width. The channel samples in this area were not assayed but as the raise is driven channel samples will be taken every 5 feet over the best mineralized strand of the vein. Car samples of the raise will indicate the effect of a known amount of dilution.

In 1X-C area the main strand of K7 vein, at 20 feet in 1X-C, had a formal narrow vein-like occurrence of silver-lead-zinc-copper ore along it, but beyond there to the end of 1X-C strong mineralization appeared to be bedded and dipping three degrees northeast. The top of 1X-C is barren dolomite and mineralization extended up from the floor only 4 to 6 feet. The floor appears to be strongly mineralized. From 27.5 feet to 41 feet, as indicated by car samples 703 and 710, (sample measurements were from center of the original drift and need 2.5 feet deducted from them) the drifts rounds averaged 0.012 ounces Au, 5.5 ounces Ag, 3.8% Pb and 2.4% Zn. Such rock would need be upgraded by a factor of three to make ore in this geographic setting. Selective blasting, in-stope sorting, and grizzly separation of fines and coarse material at the ore dump would probably be necessary to convert such material to ore.

Channel sample 705 and car sample 711 demonstrate that the mineralization was improving SW along the main strand of K7, but samples 713 and 714 tended to reverse the trend even though the present drift faces looked well mineralized. The last round in drift 117, which is shown on the attached map, looks better, but is still far from direct shipping ore. 50 to 75% of such a face would need be sorted out as waste to make shipping ore.

The work to date suggests that we may be getting into a mixgure of manto (or bedded) and vein replacement type ore in the 1X-C and drift 117 area. It looks like manto or roughly stratiform mineralization may predominate and that it will occur between 1X-C and the downdropped interbedded shale estimated to be 110 feet ahead. In the vicinity of longhole #6, in the original drift we have the most formal vein ore and what there is is the richest material encountered to date, in the range of 50 ounces silver, 1% copper, and 10% lead. The raise to the slusher drift will therefore be started on this mineralization and the center line of the raise to the slusher drift will be as indicated on the attached map as "℄ of raise". The long axis of the raise will, in plan, bear N 40° W and approximately 9 feet long. The short axis will bear S 50° W and be 4 to 5 feet long. This will give us more room for longholing into the walls of the vein strands, including the main strand; give safer working conditions; and explore a greater width of the K7 vein zone. The manway will be the NW half of the raise.

The raise was already 20 feet above the drift as of November 7. Before the raise started it was necessary to timber 40 feet of drift in order to support the ground around the raise and in other places. The timbered part will be plotted on the map for the November report.

The raise to the slusher drift is going through the Hoffman shatter zone. It is starting on good mineralization and will end in better mineralization, but it has an excellent chance to intersect the best mineralization in the vicinity of the Bayhorse dolomite-Ramshorn slate contact on the downdropped side of K7 fault where we hope to find the westward continuation of the Hoffman ore body. Developments in the 1X-C and 117 drift area suggest that we may be getting into a stratiform ore area similar to the Pacific mine which is about a mile west-northwest and high up on the mountain. Judging by Ramshorn slate attitudes in the Beardsley Gulch area the slate dolomite contact should curve more westerly in strike a short distance northwest of the 1X-C area as shown on the attached map. This change in strike could improve ground preparation due to bedding plane adjustment caused by folding and jostling of blocks between faults, which are numerous in the K7 project area. Since ground preparation is a prerequisite for formation of Bayhorse-type ore, the change in curvature in the 1X-C area is a strong "plus factor" for the area.

The K7 project (OME 6495 Project) is in the East Mill fault zone which is a northerly striking fault zone which, in effect, is a graben containing many northerly faults, but the main one with 1000 feet of throw is on the west side of the graben, and the next largest fault has a little more than 100 feet of throw and is on the east side of the graben in the bottom of Beardsley Gulch in front of K7 adit portal. The main fault on the west side of the graben drops the Ramshorn slate down so that it forms bedrock of considerable depth on the hill side east of the Pacific mine, and the slate covers any possible ore in the graben from the latitude of the Hood mine northward and for a width of 1600 feet in an east-west direction. The main west fault should be about 800 feet due west of 1X-C, but because the bedding which controls stratiform ore should strike about N 35° W shortly northwest of 1X-C the ore producing potential for stratiform ore is increased proportionate to the oblique distance across the graben.

The graben has the most intense brecciation, pyritization and rusty oxidation products in the lower half of the Pacific ore horizon of any place in the Bayhorse region that I have seen. Nearly, bent-cleavage recrystallization of this rusty dolomite might have been caused by the thermal metamorphism by an intrusive, but the interbedded shale which was found at the end of the original Stage II drift was found to be finely calcareous and showing no contact metamorphic minerals. Calcareous shales are very unstable in contact metamorphic environments; so it

became clearly evident that the intense iron-rich alteration, brecciation and recrystallization in the graben was due to some cause or causes other than an intrusion. The best remaining bet is that exceptionally intense hydrothermal action introduced the iron and recrystallized the dolomite. The brecciation probably is partly diagenetic; partly related to folding; and finally related to the northerly and north-easterly faults that acted as conduits for hydrothermal fluids.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report #12
Beardsley Gulch Mining Company, Inc.
OME - 6495 (Silver)
Contract 2219

Operator's Report for September 1967

K7 drift southwest, the major drift of Stage II designed to follow K7 vein out under the mineralization found along K7 vein in the Stage I slusher drift, advanced 109 feet in September. The work is shown on the attached map as an extension to the accurate transit survey map. In the new workings the K7 fault or vein is shown in blue as are cross fractures and parallel fractures. Fault and fracture dips are shown with arrow points while bed attitudes have no arrow on the dip symbol which is normal to the strike symbol($\times^{25}$) and all in black. Silver-copper-lead-quartz mineralization is shown in red.

Rich but narrow silver-copper-lead mineralization was encountered at 38 feet and we got out of it at 65 feet directly under the Stage I slusher drift the floor of which is 150 feet above the back of K7 drift SW. All drift rounds are sampled by channel as well as muck samples, and splits are made of all samples and kept for both OME and the Company. Every other company muck sample is being assayed now for gold, silver, lead, and zinc to establish trends and to make sure that we are not underestimating grade of any one of the metals.

At 65 feet, where we are directly under the mineralization in Stage I slusher drift, the silver-copper-lead mineralization is best and very colorful yellow, green and dark gray over about a foot in width. The ground in this area is very badly broken up and will require at least two sets of timber in the drift. This is the logical position for a raise to connect to Stage I slusher drift 150 feet above, and it is evident that we will need to fully timber the proposed raise wherever the ground is as shattered as it is in the vicinity of 65 feet southwest from the beginning of the Stage II drift southwest. ?

Considering the above and considering the width of the K7 shear zone on K7 adit level, as well as the upper slusher drift, we have requested an amendment which will (1.) allow an additional $15 per foot where full timber is needed in the raise; (2.) allow for 50 feet of longhole drilling at $1.00 per linear foot every 25 feet in the raise and (3.) allow for 60 feet instead of 30 feet of timbering at $10.35 per foot in K7 drift which can be applied, as new, in new drift or in the old rehabilitated drift. We are preserving our right to run slusher drifts, but if the raise needs timber for all of the 150 feet the allowable length of K7 drift southwest which is now 225 feet, may need be cut to something like 175 feet in order to stay within the total contract price. ?

We may, by the middle of October or before, start the raise at 65 feet in the new part of K7 drift, for it appears that that location offers the best chance for getting into ore, especially from near the slate-dolomite contact on the hanging wall of K7 vein to the mineralization in Stage I slusher drift. Nevertheless K7 drift southwest is now in the basal 1/3rd of the Pacific ore horizon, which is by far the most productive part of the Bayhorse formation, and we should drift deeper into it before we suspend that work in favor of the raise.

Dear Mr. MacLaren: Re: OME 6495 Beardsley

Please find enclosed the following:

5 copies of Challis Transportation Company invoice dated 10/1/67 in the amount of $5,422.75

5 Copies of certified payroll through the month of September

Our Workman's Compensation rate for the State of Idaho is now $1.60 in accordance with the Insurance Company of North America, Policy No. WC 643564 now in effect.

FICA taxes as shown on the payroll are $4.40 and our unemployment insurance rate for the State of Utah is $2.30.

We are also sending five additional copies of this letter.

I hereby certify the foregoing to be a true statement of the facts.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS (Cont.)

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three ~~parts of~~ the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report #11
Beardsley Gulch Mining Company, Inc.
OME - 6495 (Silver)
Contract 2219

Operator's Report for August 1967

Much of the work [redacted] for August was extra rehabilitation which was not allowed for under the OME contract but had to be done to get miners. This involved building a trestle over Beardsley Creek which would hold a 1.5 ton trammer and a five car eight ton train of muck. It also involved making more tail room by drifting 23.5 feet NE on K7 vein at the switchback approximately 400 feet in from K7 portal and making a side swithh in near the present face of K7 adit which will hold five mine cars.

The blasting connected with the 23.5 foot extension of the switchback caused the drift to cave 20 to 40 feet from the switchback and thus required more timber in rehabilitation than expected.

On August 12 and 13 we had Hammond and Everly of Butte make a transit survey of Stage I and Stage II work to date. This engineering work cost $625.00 and was considered advisable in order to insure a better connection between Stage I and Stage II drifts.

On August 13 we longhole drilled 35 feet SE + 27° and 20 NW + 20° from about 2.5 feet from the old face of K7 drift. The K7 fault zone was found to be 10 to 20 feet wide but no ore minerals were encountered and the long holes established that K7 drift is on the strongest and best mineralized strand of K7 fault.

On September 2 we finally got started drifting SW on K7 vein from the face as established by Hammond and Everly and reference to the 20' long hole NW collared 2.25 feet NE of the face. By September 7 the face had advanced 20 feet and the dolomite ground was becoming more broken up and limonitic. It is evident that we may have seriously underestimated the amount of timber needed if the present trend continues.

Dear Dooley: Re: OME 6495 (Beardsley)

Please find enclosed the following:

Original and four copies of Umont Mining bill for accounting and office expenses during August

Five photocopies of Hammond-Everly Engineering Co. invoice dated 8/18/67 in the amount of $625.00

Original and four copies of Challis Transportation Company invoice dated 8/31/67 in the amount of $705.00

Five certified copies of payroll

Our Workman's Compensation rate for the State of Idaho is now $1.60 in accordance with the Insurance Company of North America, Policy No. WC 643564 now in effect.

FICA taxes as shown on the payroll are $4.40 and our unemployment insurance rate for the State of Utah is $2.30.

We are sending five additional copies of this letter so that you may send them along to OME if further evidence is needed.

I hereby certify the foregoing to be a true statement of the facts.

Contract 2219

Dear Mr. Wheeler:

In Mr. MacLaren's absence from the office I acknowledge receipt of your Monthly Voucher and Progress Report, narrative and other documentation for the month of August 1967. I am forwarding a copy of your letter ~~(narrative?)~~ dated September 19, 1967, to our Washington, D. C. office.

The processing of your voucher and consideration of the request for long hole drilling will have to await Mr. MacLaren's return to the office on or about October 2.

Sincerely yours,

Mary L. Smelser for
D. R. MacLaren
Field Officer, OME
Region I

cc: OME w/cpy incoming let. 9/19/67 (in duplicate)

Director's Reading File

C O P Y C O P Y

Challis, Idaho

Sept. 19, 1967

Dear Mr. MacLaren:

Enclosed please find our data for August on OME-6495.

There are proofs of payment for much work that is not claimed by us in the Progress Report and voucher but I am sending them in case they will help you and us in the future if not present.

As of today Stage 2 drift SW on K7 vein has advanced 85 feet and all muck and channel samples are taken and split for Beardsley and OME and store. Geology is also mapped to 80 feet.

Rich lenses and pods of mineral up to 6" thick began to appear at 40 feet and reached their richest at 60 feet, directly under the Stage I slusher drift. Please refer to your copy, enclosed, of the Hammond and Everly map and data sheet for transit survey confirmation.

We are, judging by longhole drill holes, five of which have been put into the walls as of yesterday, on the best strand of K7 fault, but the fault zone is evidently 15 to 33 feet wide; so we are forced to probe the walls both NW & SE for 25 feet in each direction to make reasonably sure we are passing nothing in the walls.

Our contractors are averaging 5.6 feet per mining shift since they started.

Yours very truly,

/s/ DOOLEY P. WHEELER, JR.

P.S. Our longhole drilling costs are $1.00 per foot. Is there any chance of getting this included in the amendment for extra timber in the same way the extra timber would be allowed for--not going beyond the original contract (OME) price?

Memorandum

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: OME-6495 (Silver)
Beardsley, et al., Groups of Claims
Custer County, Idaho
Contract 2219

Enclosed is a copy of a self-explanatory letter dated September 11, 1967, from Dooley P. Wheeler, Jr., general manager for the Operator.

Stage I of the contract provides for 30 feet of drift timbering at $10.35 per foot. None of which has been used. There also remain unused 23 feet of slusher drift at $30.00 per foot.

In his narrative report for August which accompanies his letter Wheeler says that "we may have underestimated" the amount of drift timbering required. Until it is more certain that there has indeed been an underestimation and, if so, that it has been a significant one, it is recommended that only the unused 30 feet of timbering provided under Stage I be transferred to Stage II.

Should it develop that more than 60 feet of drift timber is required, the unused 23 feet of slusher drift at $30.00 per foot can be transferred to Stage II permitting an additional 66 feet of timbering at $10.35 per foot.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Dear Dooley: RE: OME #6495, Beardsley

Please find enclosed the following:

Original and 4 copies of Umont Mining bill for accounting and office expenses during July

Five certified copies of payroll

Our workmen's compensation rate for the State of Idaho is now $1.60 in accordance with The Insurance Company of North America, Policy No. WC643564 now in effect.

FICA taxes as shown on payroll are $4.40 and our unemployment insurance rate for the State of Utah is $2.30.

We are sending five additional copies of this letter so that you may send them along to OME as further evidence if needed.

I hereby certify the foregoing to be a true statement of the facts.

Report #10

Beardsley Gulch Mining Company, Inc.
OME - 6495 (Silver)
Contract 2219

Operator's Report for July 1967

July was a rather frustrating month for it turned into a month devoted too much to wrestling miners, and equipment, repairing equipment, etc., with the result that we did not accomplish much.

We timbered ten feet of rehabilitated K7 adit where it was threatening to cave near the stalactite cave area which is 140 to 150 feet in from the portal of the K7 adit.

We also drove 9 feet of raise on the rich but small vein approximately 300 feet in from the portal of K7 adit. This is raise 2 of Stage II. See figure 2 of the OME contract.

The raise is finished and is negative, for the vein pinched out completely towards the slate contact. The upper three feet of the raise had no vein, mineralization or fault structure to follow. As the slate cap rock was approached the vein died out instead of improved as would normally be expected.

About August 16 or 17 we expect to have a reliable crew and to start the drift SW on K7 vein. Before we do that, however, we will longhole 30 to 40 feet SE and NW into the walls of K7 fault near the present face of K7 adit to make sure that we will be following the best mineralized strand of K7 fault southwest in under Stage I slusher drift.

On the week-end of August 19 and 20 we expect to make a transit survey connecting the Stage I slusher drift with the K7 adit workings showing the exact relations of all the workings in space, including Churn drill hole #2, in case we wish to break through to it from K7 adit to enhance ventilation. Up to now all survey controls have been done by brunton, but now that we are confronted by a raise connection from K7 adit to Stage I slusher drift we need a more accurate survey.

Yours very truly,

Dooley P. Wheeler

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS (Cont.)

REMARKS (Cont.)

2/ See note 2/ MME 61 for May 1967

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three ~~parts of~~ the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

REPORT # 9
Beardsley Gulch Mining Company, Inc.
O M E - 6495 (Silver)
Contract 2219

Operating Report for June 1967

Mr. MacLaren, in a letter dated June 7, 1967, authorized starting of Stage II of Contract 2219.

The balance of the month, June 8 to 30, inclusive, was used in rehabilitating K7 Adit according to the specifications of the contract at the rate of $3.85 per linear foot for 790 feet of adit.

The operators progress report, MME form 61, and Operators monthly voucher for the month of June, form MME 60, are attached.

During July we will need timber about 15 feet of the rehabilitated adit to protect men and vent tube, and to avoid a potential costly delay if ground gets away from us. We also expect to start the drift southwest on K7 vein, and complete the raise on the rich mineralization about 300 feet in from the portal of K7.

Before we start the drift SW on K7 vein, we will, at our own expense, longhole the walls of K7 vein at the present face of K7 in order to make sure we will be drifting on the best mineralized strand of K7 vein.

Dooley P. Wheeler Jr.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Dear Dooley: RE: OME Voucher for April 1967

Please find enclosed the following:

1. Original of Operator's Monthly Voucher
2. Original of Operator's Progress Report
3. Five copies of Challis bill dated 5/6/67 covering drifting
4. Five copies of certified payroll
5. Five copies of Utah Department of Unemployment Security form showing our rate to be $2.30

OME, with our letter of 12/5/66 to Mr. D. R. MacLaren, [illegible] a copy of our Workmen's Compensation policy showing our rate to be $1.32.

Hence we have shown that payroll taxes and insurance now amount to:

F.I.C.A.	$4.40
Workmens Compensation	1.32
Unemployment Insurance	2.30
TOTAL	$8.02

We are sending five additional copies of this letter so that you may send them along to OME as further evidence if needed.

I certify the foregoing to be a true statement of the facts.

Report #8
Beardsley Gulch Mining Company, Inc.
OME-6495 (Silver)
Contract 2219

Operating Report for May 1967

My letters of May 18 and June 2, 1967, bring you up to date as of the end of May 1967 concerning Stage I of this contract which is now finished.

The attached completed forms MME 60 and 61 for May, 1966, are I trust now in order and properly vouchered so that Stage I can be closed.

The slusher drift (adit) of Stage I intersected a true vein width of slightly over 12 feet of mineralization in the interval 34 to 48 feet of the adit. This entire zone averaged 0.006 oz. gold per ton, 5.01 oz. silver per ton, 3.65% lead, 0.67% zinc and 0.11% copper. The 34 to 36 foot interval was yellowish green silver ore which, if sampled separately, would very likely have given a silver/lead ratio of the order of three ounces silver per unit of lead and a grade that would probably have been good enough for direct shipping ore. The last five feet of the mineralization intercept which you sampled (43 - 48 feet) probably could be upgraded to direct shipping ore with little sorting.

The Stage I work is very encouraging and it now looks like Stage II will result in an ore discovery resembling the enclosed vertical projection and section SS'. Striae along Vein 7 suggest that the projection could have been more accurately drawn showing an ore rake of 60 degrees to the SW between the upper (footwall) contact of the Ramshorn slate and Bayhorse dolomite and the lower (hanging wall) contact in the vertical projection. This was discussed in my letter of June 2 to you.

We are eager to secure written authorization for Stage II so that we may continue exploration. I shall be at Challis June 9 to 11, inclusive, phone 879-2390 and will be back in Salt Lake June 12 to 15th.

The 1" = 10' scale plan of the slusher drift which is one of three maps submitted to you was made before the last round was mucked out. After the last round was mucked out we found that the drift adit was 52 feet long from the reference plug instead of 50.8 feet as mapped by me and shown on the map that you have. Since the extra 1.2 feet were in slate I see no need at present to modify the 1" = 10' plan map.

Yours very truly,

Dooley P. Wheeler

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Report # 7

Beardsley Gulch Mining Company, Inc.
OME 6495 (Silver)
Contract 2219

Operating Report for October 1966

Beardsley Gulch Mining Company has done all that it can do with the HD21 bulldozer and ripper. We expended 14.45 hours in October with such equipment and succeeded in clarifying the geologic picture to the extent that Ramshorn dolomite was differentiated from Bayhorse dolomite, and Bayhorse dolomite was positively exposed and identified on the southeast side of K7 vein in the upper part (SW part) of the bulldozer trench and under the Ramshorn slate in the anticlinal roll area near elevation 182' in the trench.

Our letter of October 21, 1966, to Mr. MacLaren, described the findings as a result of the work in October and requested permission to drive horizontally approximately N 60° W for up to 75 feet in order to explore the Bayhorse dolomite close under the Ramshorn slate in the anticlinal roll, which appears to be the western extension of the Hoffman shatter zone, until K7 vein is intersected. Mr. MacLaren approved this work.

The sketch map of 10-21-66 shows the work as completed for October and shows the proposed slusher drift along the axial plane of the anticlinal roll with respect to K7 vein, Ramshorn slate, Bayhorse dolomite and K7 adit.

Operating Report for April 1967

In the work interval April 21 to 30, 1967, the slusher drift adit of stage I (amended) progressed 22 feet approximately N 60° W.

In that interval the adit encountered blebs and pods of limonite and quartz in brown shattered dolomite. The quartz is the same variety as seen in the Hoffman stope directly east of the slusher adit across Beardsley Gulch, and this quartz has blebs of partly oxidized galena in it as it does in the Hoffman stope.

General This report combines the month of October 1966 and April 1967. Starting October 22 and ending April 21 the work on Stage I was suspended by authorization of Amendment #2.

This report and accompanying voucher and progress report forms 60 and 61 attempts to conform exactly to requirements and reclaim unpaid supervision, insurance, FICA, etc., costs for August and September 1966. I trust that everything is now in order, for I would like to have the final report for stage I, due at the end of May, simple and correct.

Yours very truly,

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

CONTRACT 2219

Operating Report for September 1966 - Report #4

Five days, September 7, 8, 9, 10, and 23, were spent in trenching this month with the HD21 dozer. Six days were spent supervising the work, mapping geology, sampling, and resurveying the K7 adit with reference to the trenching.

The overburden proved to be 20 feet deep. This, plus the fact that the slate-dolomite contact proved to be a fault contact, where clearly exposed, has increased the difficulty of properly exploring the Hoffman zone at the favorable slate-dolomite contact.

The enclosed sketch map shows the trench, the geology and the relation of the trench geology to the K7 adit. The datum plane is zero elevation for K7 adit so that the elevations of parts of the trench, relative to the adit, are immediately clear.

It now appears that the K7 vein or fault could be exposed in the SW (upper) end of the trench. K7 in that location is barren gouge (sample 2-9-27-66), but the slate and dolomite on both sides are locally sparsely mineralized with partly oxidized lead-zinc-copper-silver minerals. The slate bedding attitudes are shown on the NW side of the trench. The anticlinal roll at an elevation of 182 feet on the NW side of the trench appeared to be the best mineralized part of the pit---at least in terms of oxidized pyrite in slate and dolomite. Sample #1 9-27-66 of the mineralization shows no gold and lead, and only 0.1 oz Ag P/T, and 0.1% Zn. The dolomite may be a basal member of the Ramshorn slate which was found about 600 feet east of elevation 182 in diamond drill hole 24 and others. This dolomite unit is 5 to 10 feet thick and is 10 to 20 feet above the contact with Bayhorse dolomite.

More bulldozer work will be done in October in order to try to expose the fault (K7 vein?) for the whole length of the trench and in order to try to get through the slate northwest of the fault. The greatest effort will be made in the anticlinal roll area at elevation 182, for this roll is on line with the western projection of the Hoffman stope and it offers the most colorful alteration and the shortest route to the Bayhorse dolomite.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts ~~of~~ the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

BEARDSLEY GULCH MINING CO., INC.
OME 6495 (Silver)
(September 23, 1966)

Operating Report - For August, 1966

Trenching commenced on the project August 15, 1966 after delays due to breakdown of both the HD 21 and TD 14 (TD 142).

The enclosed sketch map shows a mineralized fault that trends (traces) north 60° east and dips approximately 75° NW. The fault is mostly gouge but streaks of partly oxidized silver-lead-copper ore are in the slate in and near the fault and more pod-like occurrences of the same mineralization are found in the dolomite which is on the southeast side of the fault.

This fault is parallel to the K7 vein and fault and about 50 feet southeast of it. It is possible that it is the K7 vein, but if it is K7 flattens abruptly towards the surface and then steepens again at the surface. Chances are better that the vein is a parallel structure similar to K7.

There appears to be very little chance of exposing the dolomite under the slate on the northwest side of the fault with the bulldozer work, but in the process of exposing the slate-dolomite contact with trenching we may be lucky enough to get away from a fault contact between dolomite and slate northwest of the fault.

During the month of August $530.00 were spent on bulldozer work; including mobilization, and $(\frac{1}{4.29} \times \$750.00)$ $175.00 were spent on geological mapping and supervision, plus $14.47 on payroll taxes, F.I.C.A., insurance, etc. No sampling or assaying was done, and accounting and office expenses will be done and charged at the end of Stage I.

Yours very truly,

Dooley P. Wheeler, Jr.
