REMARKS (Cont.)

REMARKS (Cont.)

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

NARRATIVE REPORT

September 1963

Docket OME 6236
Contract No.14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

All units of work specified under the current contract were completed this month. Work this month consisted of 47.5 feet of advance in Raise No. 1 and 29 feet in Raise No. 2, with attendant assays, to provide the contract length of 100 feet in each. Additional raising continued in both headings.

Raise No. 1 intersected shale at about 65 feet and continued in shale at an inclination of 65°. The vein structure weakened and split near the shale-porphyry contact, and mineralization in the raise diminished near its top. Longhole drilling indicates a continuation of fairly good mineralization in the shale of the hanging wall, and there is evidently a rake of mineralization to the northeast. Further drilling and/or drifting from the raise will be necessary to confirm this impression.

Raise No. 2 continued in porphyry, but at 65 feet the structure abruptly steepened from 47° to 80° and weakened into close-spaced splits. A bean-hole in the hanging wall, collared at 92 feet indicates that the structure either bends and reverses its dip, or is intersected by downward projection of the ore-bearing structures of the 350 level. Longholes cut excellent samples in the hanging wall of the raise at the bend.

The drift heading (non-OME) on the 550 level continued along strong mineralized structure. Several surface dozer cuts were dug to verify geologic projections and to check anomolies. No assays are yet available from this work.

Approved by OME Executive Officer or Alternate:

Signature D. W. Yackeren Title Acting Field Officer, Reg. I Date SEP 16 1963

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Government Representative

Date SEP 16 1963

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

August 1963

Docket OME 6236
Contract No.14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Advance under the contract amounted to 34 feet in Raise #1 and 71 feet in Raise #2.

Raise #1 is now at an inclination of 74° in porphyry. The mineralization is principally concentrated within a 1 to 2 foot structure along the hanging wall of the raise. Short drill holes in the hanging wall indicate the existence of splits in the vein. The footwall thus far seems to be essentially barren.

Raise #2 was collared at 1457 feet from the portal and is being driven up at 47° along the structure which averages about 6 feet wide. Short drill holes in both walls show bulges in the mineralized width.

Assays from both raises show an erratic distribution of ore minerals, though selected samples can be taken of relatively high grade material.

Approved by OME Executive Officer or Alternate:

Signature D R Macharen Title Acting Field Officer, Reg. I Date AUG 23 1963

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

July 1963

Docket OME 6236
Contract No.14-23-090-2148
Bold Bug, et al., Phillips
County, Montana

Work done under the contract this period consisted of 9.5 feet of raising in the first raise, designated #1 Raise. Authorization was received for location of #2 Raise and preparatory work (non-OME) was started upon it. Elsewhere in the mine 91 feet of drifting and 908 feet of longholing were performed.

Ore in the #1 Raise is principally within a pyritized breccia structure along the hanging wall. Assays in the raise are misleading as a footwall split of the breccia zone created a 4 foot horse of barren porphyry on the footwall of the raise and advance was stopped for the month before the raise cross section could be pulled in to eliminate this barren zone. The footwall split is narrow and apparently pinching out, so it will not be followed. Drift timbering was invoiced under the collar of the raise as the raise excavation weakened the drift walls enough to require auxiliary support.

A 5 foot channel sample across the vein on the portal end of #2 Raise showed 7.26 ozs. Au and 18.2 oz. Ag. The structure at this point is highly brecciated and contains both sulfides and iron ozides with some flourite.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection
OME-6236 (Gold-Silver)
Northern Continental, Inc.
Gold Bug, et al., Claims
Phillips County, Montana
Contract 2148

The subject project was inspected and the advance measured July 23, 1963, accompanied by J. G. Roscoe, superintendent of mines for the operating company. The distances between survey stations which are numbered in the mine but are not identified on the operator's voucher maps are:

From	To	Distance	From	To	Distance
Portal(I.P.)	G-3	16.0	G-11	G-12	88.1
G-3	G-4	115.7	G-12	G-13	128.5
G-4	G-5	105.7	G-13	G-14	125.5
G-5	G-6	95.5	G-14	G-16 1/	133.0
G-6	G-7	112.0	G-16	G-17	137.0
G-7	G-9 1/	121.0	G-17	G-18	91.3 2/
G-9	G-11	135.5	G-17	G-18A	90.0
			G-18A	Face	132.0
			Total advance		1,535.5

1/ G-8 and G-15 knocked out and not replaced

2/ G-18 knocked out; replaced by G-18A

The maximum drifting authorized by the contract is 1,500 feet; therefore, the advance since the last inspection which was made April 25, 1963, is 83 feet. At about 1,220 feet from the adit portal No. 1 raise has been started and driven 3-compartment to a height of 17 feet from the back of the drift. Three sets of timber or 15 feet were emplaced for ground support and chute installations. However, as the contract specifies a 2-compartment raise, Roscoe was advised that only 2 sets or 10 feet is recognized as OME timbering and that the contract price would apply to the raise even though it was driven 3-compartment.

Two samples, 184-C and 185-C, were taken at the drift face, the former, a chip across a 6-foot width of shearing and fracturing, the latter a chip across 0.7 feet of a hanging-wall vein heavily stained and filled by iron oxide and small specks of (later?) pyrite. The 6-foot wide shear zone is in highly shattered indurated shale and porphyry. The shatter cracks contain thin seams of pyrite and iron oxide as well as a second prominent shear an inch or 2 thick. The entire zone strikes about N. 46° E. and ranges in dip from 60° SE on the hanging wall to 50° SE on the second shear. Assays of the samples are:

Sample No.	Width	Ounces/Ton Au	Ounces/Ton Ag
184-C	6.0 ft	0.07	10.3
185-C	0.7 ft	0.32	48.6

The raise follows a strong shear that was sampled during the last inspection. Near the back of the raise the structure splits, the more strongly mineralized one apparently being in the hanging wall. Although there are a few exceptions for short strike lengths, there is little if any rock alteration bordering the higher grade streaks and in general vein boundaries are assay boundaries.

About 2.5 hours were spent on the property during which the channel car sample provisions of Amendment No. 2 were fully discussed with Mr. Roscoe.

D. R. MacLaren

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Government Representative

Date AUG 8 1963

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

June 1963

Docket OME 6236
Contract No.14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

The first of 2 raises was started in the latter part of the month, and longholing was completed.

89 feet of crosscutting and 176 feet of longholing were performed outside the contract.

OME longholing was completed.

Hole No.	Bearing	Inclination	Length	Remarks
33	N 40 W	plus 5°	100	
34	N 40 W	plus 30°	100	
35	—	in plane of vein, not drilled		
36A	S 70 E	plus 5°	100	
37A	S 70 E	plus 30°	68	Hole caved
38A	S 70 E	plus 45°	40	Hole caved

Holes 33 and 34 in the left rib did not cut ore, though some mineralization was found. Hole 35 was not drilled as it was in the plane of the vein. Holes 36, 37 and 38 were collared perpendicular to the adit and could not be completed due to caving and loss of circulation. Another series 36A, 37A and 38A was collared at an angle about 60° from the adit with better success. Holes 37A and 38A still could not be completed to 100 feet. 37A contained interesting values from 56 to 68 feet.

The center of the raise is at portal plus 1226 feet, and runs up on a dip of 62° on the hanging wall. The principal values are contained in a fairly strong structure about 1 foot thick along the hanging wall. The remainder of the raise cross section is composed of alternating bands of massive porphyry and narrow, pyritized structures. A fairly strong structure creates an apparent footwall. 9 feet of raise was driven following installation of chutes.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

May 1963

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Drifting under the contract was completed this month. No other work under the contract was performed.

Contract drifting was resumed in the 550 adit and another mineralized structure was intersected at about 1425 feet from the portal and was still in the drift at end of the month. The vein varies from 1 to 3 feet wide on a average dip of 40° to the southeast. It is highly brecciated and cemented with abundant pyrite and silica. It contains numerous cavities, as large as 3 to 4 cubic feet in volume, which generally rake to the east downdip. The walls of the vein exhibit considerable gouge and oxidized rock which may be 2 feet wide in places. A band of low-grade fluorite 3" wide occurs along the footwall.

This structure has not been definitely identified in crosscuts from the main drift at portal plus 1313 feet; although further work may reveal correlation with structures cut in 17 N.W. crosscut. The vein transects sediments where it enters the drift and continues along the drift in porphyry. Alteration obscures the appearance of the porphyry in the drift but the possum porphyry and "chilled" zone along the sediment contact seem to grade into syenite porphyry near the end of the drift.

Mineralization of the vein is not as intense or as continuous as in the ore shoot previously encountered. Silver to gold ratio is much higher in favor of gold in this area, but overall average value is below ore grade in the vein sampled thus far. Character of the vein at the face is unchanged and indications are that it will continue ahead.

No longholing was performed under the contract, and all longhole data was up to date with Hole 26 log and samples showing it all in sediments with slight mineralization from 84 to 92 feet.

The preparatory work for pre-raise drilling (non-OME), outlined last month, was completed with crosscuts from portal plus 1313 feet to the N.W. and S.E.. The northwesterly crosscut along Hole 27 (17 N.W. crosscut) was driven 116 feet from the center of the main drift (note curve in Hole 27) and drill station cut at end. Syenite porphyry was contacted at 36 feet (correlated with drill hole footage). Drill sample at this point showed 4 feet of .31 Au and 46.2 Ag, car sample yielded 0.07 Au and 1.5 Ag and a 4" channel on the contact assayed 0.40 Au and 16.8 Ag. This seems to verify suspected concentration of values in drill cuttings due to strong water flow from hole. This contact is a fault zone between the sediments and porphyry and may be extension of vein in north end of main drift although their strikes do not correspond.

Syenite porphyry continued to the end of the crosscut. A series of narrow structures were cut at 76 feet which contain some mineralization and maintain a flow of water estimated at 1000 gpm, mostly artesian. Drift assays here were .02 Au and 2.8 Ag which correlate with 4 feet of .09 Au and 3.3 Ag in Hole 27. This zone is interesting in that it has the only significant northwesterly dipping structure yet intersected (the Gold Bug zone on the 350 level dips N.W. and conceivably correlates), and since opening the water course the effluent of the August 600 level (1600 feet northerly, parallel to the Gold Bug zone and only about 30 feet higher) has diminished from about 1000 gpm, maintained thruout last year, to 5 gpm. There are no known interconnecting structures.

The southeast crosscut (17 S.E. crosscut)was completed at 208 feet from the main drift with drill stations at 65, 120 and 195 feet. Crosscut went from sediments to syenite porphyry for 20 feet at 165, then into sediments to its end.

3 drill holes from the station at 65 feet, at plus 45° inclination, in a pattern covering an arc of 60° centered on the crosscut, cut good ore values in the area between the 550 level and the 350 level. 2 similar holes from the station at 120 feet also cut good values higher in this area.

Several holes will be drilled from the 17 N.W. crosscut to delineate mineralization in this area from another direction before raises will be driven.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection
OME-6236 (Gold-Silver)
Northern Continental, Inc.
Gold Bug, et al., Claims
Phillips County, Montana
Contract 2148

The Gold Bug property was visited July 23, 1963, and the progress checked in the company of John G. Roscoe, superintendent of mines for the operating company. In addition to the routine check of progress the questions of incorrect vouchering and approval of car samples, and necessary adjustments therefor that will be made in the May voucher, were discussed. The nondiscrimination notice was posted conspicuously in the compressor house. About 2½ hours were spent on the property.

Since the last inspection, which was made April 25, 1962, the drift was advanced 136 feet from the initial point for a total advance of 1,535 feet -- 35 feet beyond the drifting provided for in the contract. The face showed a strong hanging-wall shear dipping about 70° S. and a slightly weaker one dipping from about 30° S. steepening to about 70° S. as it approaches the hanging wall. Two samples were taken and assayed.

Sample No.	Location	Width (ft)	Au/T	Ag/T
185-C	Hanging wall shear	0.7	0.32	48.6
184-C	From HW to FW of shear zone	6.0	0.07	10.3

The hanging-wall shear contained considerable iron oxide though some fresh pyrite coated with marcasite was also seen. Along some planes throughout the shear zone occasional small crystals of pyrite occur. The only rock alteration apparently is mild pyritization about equally distributed and seems to have no direct detectable relation to the amount of gold and silver found in the assays. Possibly thin section work would disclose two or more periods of pyrite deposition.

About 1,380 feet from the start of the drift a raise has been driven on 2 veins to a height of 17 feet from the back of the drift. The veins appear to enclose a shear zone, the one on the hanging wall being the stronger. A description would be a repetition of the one just given of the drift face although the zones are not the same.

The raise is driven in 3 compartments. Mr. Roscoe was advised that the OME rate would be that given in the contract for a 2-compartment raise. He was also told that, although the drift was timbered for 3 compartments, OME would only accept the 3 sets necessary for a 2-compartment raise.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

April 1963

Docket OME 6236
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Work performed this period under the contract consisted of longholing, with assaying therefrom. Drifting and raising will be resumed following crosscutting and drilling (non-OME) to develop orientation and verification data.

It is evident from the nature of the structures in which ore has been found and from the attitude of the sedimentary rocks which overly the mineralized porphyry that the structures may be difficult to follow and certainly will change character when the sediments are intersected. In order to effectively guide and sample the raises to be run under the contract it is desireable to obtain drilling information to outline possible conditions which may be encountered. This is particularly pertinent as there is probably a relationship between the ore shoot in the main drift and the ore shoot on the Gold Bug 350 level that has not been indicated at present. Therefore a crosscut on Hole 27 will be driven about 110 feet and a crosscut on Hole 30 will be driven 200 feet. A series of drill holes will then be drilled and logged to provide this information.

This month 75 feet (non-OME) was driven on Hole 27 and 161 feet (non-OME) on Hole 30. Results, from sample returns to date, indicate that drill cuttings assayed compare favorably with bulk samples from crosscutting. Along Hole 27 average value of crosscut samples for 69 feet was $2.96 combined gold and silver, while the drill assays for that distance averaged $10.11. It is suspected that higher value in drill samples is because a lower proportion of non-mineralized fines was recovered due to heavy water flow resulting in concentration of sampled material. Along Hole 30 for 125 feet the averages compared were $1.30 for crosscutting and $1.01 for drilling. There was no significant difference between individual intercepts sampled in this hole, though the highest assay was only $3.95.

While sample results from longholing are sufficiently reliable for exploration, lithology is more difficult to determine. Logs of cuttings from Hole 27 indicated that the sediments ran from the collar to 70 feet. Crosscutting revealed that syenite porphyry was cut at 36 feet. This discrepancy was probably caused by contamination of cuttings from sedimentary particles dislodged by drill rods and high water pressures from an open fracture cut at 36 feet. The converse occurred in Hole 30. It was originally reported that possum porphyry extended to 106 feet, but closer inspection of cuttings indicated that highly silicified sediments were cut at about 65 feet. This latter condition was verified by crosscutting.

Longhole drilling performance and results are as follows:

Hole No.	Bearing	Inclination	Length	Remarks
26	SE	plus 45°	100'	No samples yet
28	NW	plus 30°	12'(80-92)	Complete, lost circulation
29	NW	plus 45°	100'	

RECEIVED
MAY 13 1963
U.S.G.S.
SPOKANE, WASH.

Hole 26 was drilled from the station at 1112 feet. Log and samplesreturns have not been completed at present.

Hole 28, from station at 1313 feet, was drilled another 12 feet this period, but loss of circulation prevented drilling beyond 92 feet. Strong mineralization was cut at 8-12 feet and 28-32 feet. Fairly good mineralization was cut at 0-4, 12-16, 24-28, 40-41 and 84-92. Correlation of mineralization with that in Hole 27 is problematical as Hole 28 was in porphyry for its entire length. Hole 29 was also entirely in porphyry and showed fair mineralization at 16-20, 40-44 and 64-68 feet. Assays for Hole 32, drilled last month, displayed a wide mineralized zone of fair value from 52 to 68 feet, which appears to be in a fault zone on porphyry-shale contact. This section correlates well with a fault breccia zone cut by Hole 30 (and its crosscut) and with good mineralization in Hole 31.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

March 1963

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

The ore grade mineralization continued in the adit from the face at the beginning of the month (portal plus 1272.5') to a point about 1315 feet from the portal. The adit continued to be mineralized to the face, at 1400.5 feet, but grade diminished appreciably, and the ore-bearing structure has pinched out.

A drill station cut at 1313 feet revealed a zone of chilled porphyry 4 feet wide in contact against flat-lying sediments in the footwall of the mineralized structure. At this point the structure decreased in strength, swung to the left thru the chilled rock and faded in the sediments. The adit was driven slightly to the right to stay on the contact of the sediments.

Advance of the adit was stopped at 1412.5 feet, and a cross-cut (now OME) was driven 55 feet to the right on a bearing of N 85°E to check whether a split of the ore shoot may have extended in the hanging wall parallel to the contact. A strong fracture zone, trending N 10°E, was cut which contained siliceous sandy gouge and pyrite, but only weak mineralization. A 15 foot drill hole in the face did not show significant assays, although the last 4 feet of a 25 foot hole bearing S 25°E from portal plus 1405 showed .31 oz Au and 0.8 oz Ag. However, a 24 foot drill hole at 1406 bearing N 25°W, entirely in sediments was significantly mineralized for its entire length. This information, coupled with the assays in the adit from 1313 to the face and the samples of the first 20 feet in Hole 27, indicates that the sediments contain enough mineralization to warrant continuation of the adit at about N 55°E along the contact.

The ore bearing zone evidently continues in its northeasterly trend, but the original structure has died out. Control and continuity of mineralization in the sediments is yet unknown.

Percussion drilling of longholes produced several indicative samples from both sides of the adit. Sample results are not complete for all holes drilled.

Hole No.	Bearing	Inclination	Length	Remarks
24	SE	plus 5°	100'	49' drilled in Feb.
25	SE	plus 30°	89'	Lost circulation
26	SE	plus 45°	--	Drilled in April
27	NW	plus 5°	100'	
28	NW	plus 30°	80'	Incomplete, no samples yet
29	NW	plus 45°	--	Drilled April
30	SE	plus 5°	100'	
31	SE	plus 30°	100'	
32	SE	plus 45°	100'	No samples

RECEIVED
APR 22 1963
U. S. G. S.
SPOKANE, WASH.

Holes drilled last month from drill station at 1112 feet upon which logs and assays were not reported were:

Hole 21, entirely in porphyry, was well mineralized from 0 to 32 feet and at 76 to 84 feet. Fractured ground and heavy water flow was encountered in the first 32 feet. Hole 22 at plus 30° in the same plane, entirely in porphyry, was mineralized from 0 to 8 feet. Slight mineralization occurred at 40 to 44 feet. Hole 23 at plus 45° in the same plane had minor mineralization from 8 to 16 feet in porphyry. At 52 feet it cut siliceous, pyritized shale, which ran to 76 feet. From 76 to 92 feet porphyry was intersected, with the last 8 feet again in shale.

Hole 24 was completed this month. Although invoiced for 100 feet it was drilled to 112 feet. The first 104 feet were in shale - syenite porphyry with a light tan color and abundant phenocrysts, contrasting the ore-bearing grey possum porphyry, ran from 104 to 112 feet. Slight mineralization was sampled at 24 to 32 feet and from 84 to 100 feet. Hole 25 in the same plane at plus 30° was all in shale, but circulation was lost at 89 feet and could be drilled nofurther. This probably occurred at the syenite porphyry contact. Very slight mineralization was encountered.

Holes drilled from the drill station at 1313 feet produced encouraging results although sample returns are complete on only 3 of them. Hole 27 was drilled in shale to 70 feet and completed in porphyry. A strong water course at the contact flows 100 to 200 gallons per minute. This hole was mineralized for its entire length with particularly good samples at 8 to 20 feet, 36 to 56 feet, 64 to 68 feet and 76 to 80 feet. Hole 28 at plus 30° in the plane of 27 has not been assayed yet and was in porphyry to 80 feet where lost circulation stopped its advance. Hole 30 was drilled in porphyry to 106 feet where shale was cut. Slight mineralization occurred in the first 4 feet and from 28 to 52 feet. Minor mineralization was also detected from 60 feet to 108. An open fracture with minor values was intersected at 64 feet. Only 100 feet was invoiced for this hole. Hole 31 drilled at 30° in this plane collared in porphyry, cut shale at 75 feet and bottomed in shale. As in Hole 27 the entire hole was mineralized to some extent with good assays from samples at 28-32, 52-56 and 60-72 feet. Samples have not been received from Hole 32 at plus 45° in this plane, but the log shows porphyry from 0 to 44 feet, then shale to 92 feet and bottoming in syenite porphyry.

Geologic relationships and correlation continue to be obscure when compared to the upper levels. Drift advance under the contract will be suspended while crosscutting on drill holes 21, 27 and 30 to obtain verification data on percussion drill samples. The first raise will be started after several steep holes are drilled across the back to obtain lithologic guides for direction. It is apparent that the mineralized zone will be difficult to follow and it is believed it will be worthwhile to have a previous idea of what may be expected.

Mining conditions continued much the same as previously. No timber was required, but water flow is about 50% greater than in February. The porphyry areas cause high consumption of drill steel and bits

An additional, partial, plan map and a vertical cross-section are included with this months report.

OFFICE OF MINERALS EXPLORATION
So. 157 Howard Street
Spokane 4, Washington
May 2, 1963

OFFICIAL FILE COPY
RECEIVED 1963

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection and contract amendment
OME-6236 (Gold-Silver)
Northern Continental, Inc.
Gold Bug, et al., Claims
Phillips County, Montana
Contract 2148

The Gold Bug property was visited April 25, 1963, and the work was checked with Glenn Franklin, engineer-supervisor. About three hours were spent on the property. The last inspection was made November 8, 1962, since when the tunnel has been advanced 852 feet for a total of 1,417 feet from the portal. No new timber has been installed. At his own expense, the Operator has extended drill station 5 about 100 feet southerly and 50 feet northerly and has driven an angle crosscut easterly from the drift face. The latter was filled with water dammed up by a muck pile, but appears to be about 60 feet long.

As a check on the long-hole drilling, Franklin was asked for the footage by hole completed since the last (February) voucher. Upon my return to Spokane, I found the March voucher, which indicates that the Operator has a tendency to undervoucher drill footage as follows:

Hole No.	Franklin's footage	Vouchered
24	63	51
25	88	89
26	108	(Drilled in April)
27	100	100
28	92	80 (incomplete)
29	100	(Drilled in April)
30	108	100
31	100	100
32	100	100

Apparently the Operator believes that he cannot claim more than 100 feet for any hole, although the contract states that the holes will average 100 feet in depth. This will be discussed during my next

inspection. As of the end of March, drilling totalled 2,129 feet. Adding Franklin's depths to the total vouchered in February, the total footage drilled is 2,468 feet, distributed among 24 holes; the indicated average depth of hole is therefore in the order of 102.3 feet per hole, whereas the average depth of the 24 holes as vouchered through March is only 88.7 feet per hole.

About 1,200 feet from the portal a fracture, in places vuggy and in other places fairly tight, came into the drift from the northwest wall. About six feet farther another similar fracture entered the drift from the same wall. They are nearly parallel, with an average strike of N. 48° E. and dip 60° to 80° S.E. Between the fractures is about two feet of sheared and brecciated "Possum" porphyry, which comprises the wall rock on either side of the fissures. Pyrite and marcasite occur in some of the vuggs, but only small bits of pyrite were seen in the tighter portions of the shears. In less amounts, pyrite was also seen in the wall rock adjacent to the brecciated zone and in breccia fragments. About 100 feet from where the first fissure enters the drift, the distance between the two narrows to about a foot and at about 135 feet they leave the drift in the southeast wall at drill station No. 5.

A narrow band of what is locally called "chilled Possum" porphyry comes into the drift from the northwest side at drill station No. 5 and continues to the drift face. Approximately five feet wide, the chilled Possum porphyry is more in the nature of a contact zone between the moderately argillized shale beds and the Possum porphyry. Two chip samples were taken. One at 1,404 feet from the portal across 12 inches of sheared shale, which showed only small scattered specks of pyrite, assayed 0.07 ounce gold and 5.3 ounces silver per ton. The other was taken from a vuggy section of the second fissure where it enters the drift at about 1,225 feet from the portal. The fissure is here about six inches wide and contains some quartz grains, pyrite, and marcasite. The sample was cut along the fissure to determine to what extent this sulfide and quartz assemblage contained gold and silver; it assayed 0.48 ounce gold and 47.5 ounces silver. Although the material in the first sample did not show any significant mineralization, at $35.00 an ounce for gold and $1.25 an ounce for silver it is worth about $9.00 per ton; the second sample, expected to run high, is worth about $76.00 per ton. 6" wide

During a discussion of sampling methods, Franklin said he had been taking only car samples easterly from station G-16 plus 22 feet, which would be sample No. 5462 or 5463 shown on the Operator's February and March progress maps, and that some car samples were taken before that point was reached, but he was vague as to how many. Under the terms of the contract, only cut samples in significantly mineralized areas can be approved for Government participation. The assays of the samples just described will illustrate that some material that does not show significant mineralization may contain values that with "sweetening" could become ore grade, and they also illustrate extreme difference

in values that may exist. It is believed that for practical purposes the results of car sample assays give more valuable information than would cut samples limited to significantly mineralized portions of veins. However, cut samples are also necessary to determine the localization of higher values that might be of ore grade and width but would be diluted to low grade in car samples. One car sample represents 1.3 tons of rock.

It is recommended that an amendment be prepared to change the first sentence of the first paragraph under Exhibit "A", General Provisions, to read: "When structure and mineralization indicate the advisability, drift and raises shall be sampled by cutting channels normal to the drift or structure. In zones shown to contain significant values in gold and/or silver, channel samples shall be taken at intervals of not more than 10 feet. In these zones composite car samples from each round may be substituted for cut channels," and that the following sentence be added to the same paragraph, "The total number of samples shall not exceed 1,400."

Approved by OME Executive Officer or Alternate:

Signature D R MacKaron Title Acting Field Officer Date MAR 19 1963

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

February 1963

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Ore grade mineralization was intersected at about 1200 feet from the portal and was still evident in the face at the end of the month. The mineralization occurs along 2 parallel fractures which vary from 1 to 2 feet apart, dipping SE 60° to 75°, creating a brecciated zone that is at least as wide as the drift. Brecciation is most intense between the fractures and gradually decreases toward the footwall. The structural pattern varies in detail, but in general the right hand fracture is the stronger, with openings up to 3 inches wide, 2 feet long along dip and 4 feet deep along the strike. Some openings are entirely void, others contain porphyry fragments, silicified rock and talcy gouge. The ~~right~~ left hand fracture is similar, with smaller openings and less pyrite. The area between the fractures is highly brecciated and recemented with glassy quartz and pyritic sulfides. Brecciation diminishes in the footwall of the right hand fracture, though a strong joint system, with major orientation parallel to the fractures, has been developed.

The fractures entered the adit at an acute angle from the left, crossed the drift until they were nearly into the right hand rib and then swung to the left to continue more or less parallel with the drift at present. A joint about 1 foot in the hanging wall of the stronger fracture forms an apparent hanging wall. At least it has been fairly continuous and uniform to leave a smooth wall. The joint system mentioned above, on the left, acts as a footwall, but that may be only an apparent feature of the structure.

All samples taken to date have been full drift width, with no attempt made, as yet, to differentiate between the breccia zone and the jointed zone. No ore minerals have been distinguished megascopically, but highly mineralized material can be recognized by black and greenish sooty minerals deposited on breccia fragments and in vesicles in the porphyry. Under 40X binocular microscope tetrahedrite has been tenatively identified. Usually these minerals are covered by a $\frac{1}{4}$ to $\frac{1}{2}$ inch layer of pyrite or marcasite which is characterized by botryoidal structure of radial crystals. This is particularly characteristic of the breccia zone. Joints have also been coated with these sulfides though they are mostly fine grained cubic crystals, and the sooty material is less evident.

The host rock in this area is difficult to identify in detail, though it is a porphyry similar to that encountered last month. Within the ore zone it has a dark grey color with poorly developed feldspars. The groundmass is highly silicious, and varies from dense to semi-vesicular, with minor quantities of fine grained sulfides. Oxidation is almost totally absent.

MAR 13 1963
U.S.B.M.
SPOKANE, WASH.

Geologic relationships are still confusing. The ore zone is vertically below known ore in the old workings, but rock types and attitudes cannot yet be correlated with any certainty. Logs and assays are not yet available upon longhole drilling done in February.

To recapitulate the chronology of drifting advance, a contact between sediments and porphyry was intersected at about 1075 feet from the portal. The contact was mineralized, but quite spotty, and appears to be step-faulted along the right rib of the drift. Samples along the fault showed no values, though a minor amount of sphalerite and galena were observed.

A drill station cut at 1112 feet was entirely in non-mineralized sediments in the right hand crosscut, and the left hand crosscut was in essentially barren porphyry. A weak fracture in the porphyry cut at 1145 feet was barren. At 1175 a series of north-south trending fractures containing ¼ to ½ inch of white, talcy gouge were intersected. They showed no evidence of mineralization. The ore bearing fractures were found at 1200 feet.

No sample returns or logs are yet available on holes drilled this month.

Hole No.	Bearing	Inclination	Length from Collar of Hole
21	NW	plus 5°	100'
22	NW	plus 30°	100'
23	NW	plus 45°	100'
24	SE	plus 5°	49' to date

Logs and assays for Holes 19 and 20 drilled last month showed no significant values and went from sediments into barren syenite porphyry at 42 and 30 feet respectively.

Mining conditions were fairly good this month. Weather improved and no time was lost therefrom. Water flow from the face and drill holes increased to more than 600 gpm. Ravelly nature of the breccia zone necessitates the drilling of 4 foot rounds, although the rock stands well without timber.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

January 1963

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

After drifting in sediments for about 245 feet, a dike of "possum" porphyry was intersected near the end of the month. Thickness of the dike is yet unknown as the face was still in porphyry at month's end, as indicated by the progress sketch. "Possum" porphyry is a local term for a fine grained, hard, highly silicious porphyry which emits a fetid odor when crushed, and which historically has been associated with ore bodies in the district. Such a dike is exposed in the old upper levels of the Gold Bug and seems to correlate, dip and strike, with the intersected dike. A sample taken at the contact zone between the sediments and porphyry contained significant mineralization. The drift is now following a fracture zone, but sample returns have not yet been received. A drill station will be cut near the present face and it is hoped that the Gold Bug structure can be accurately located therefrom. 50 feet of drift advance will reach a point vertically below the most southerly ore zone on the lowest upper level of old workings. There are several logical geologic possibilities as to what occurs in the Gold Bug structure between the 2 levels; in any case we believe we now have reached the most significant geologic environment encountered to date.

Some portions of the sediments have contained minor mineralization, mostly along faults or breccia zones. This pendant of sediments is considerably larger than expected from mapping of upper levels, and there are indications that it may contain ore grade material in places.

A second drill station was cut at 907 feet from the portal and 3 holes were drilled in each rib, thus:

Hole No.	Bearing	Inclination	Length from Collar of Hole
15	N.56°W.	plus 5°	100'
16	N.56°W.	plus 30°	100'
17	N.56°W.	plus 45°	84'
18	S.45°E.	plus 5°	100'
19	S.45°E.	plus 30°	100'
20	S.45°E.	plus 45°	100'
			584'

Sample returns are complete only on Holes 15 and 16. Both holes showed anomalies in shale for the first 40 feet from the collar.

REC
FEB

Two attempts were made to drill Hole 17 to 100 feet and were unsuccessful due to broken drill rods which could not be extracted from the end of the holes. Inasmuch as the collars of the holes are 14 feet from the centerline of the main adit, 98 feet of exploration was achieved.

The last 16 feet of Hole 15 was in barren "possum" porphyry. Holes 16 and 17 were entirely in shaley sediments. This information, coupled with the intersection of the porphyry in the adit, strengthens the correlation and projection of the geology mapped on the upper levels. Hole 18, on the opposite side of the adit, cut barren syenite porphyry at 56 feet. Logs and assays are not yet complete on Holes 19 and 20.

Assays have been completed on holes drilled last month and all showed slight mineralization near the collars with no apparent significant anomalies elsewhere in their lengths.

Mining was hampered to some extent by cold weather and snow. The project lost 6 shifts due to closed roads. The flow of water increased to about 500 gpm at the contact on the porphyry dike and continues to flow at that rate. No timbering has been necessary for some time.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

INT.DUP.,D.C.59- 61577

NARRATIVE REPORT

December 1962

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Mining conditions remained about the same as usual this month, but geologic conditions did not improve. At the end of November a fault apparently cut off an encouragingly mineralized structure and the drift continued ahead in a sholy sedimentary rock. Progress during December indicates that the sediments are remnants or pendants erratically included in the porphyry and the fault is more of a "contact" feature. At about 715 feet from the portal the drift reentered porphyry. As the character of the porphyry resembled the footwall rocks investigated in Crosscut #4, and as it contained no favorable brecciation or oxidation, the drift was swung 12° to the left at about 790 feet from the portal. (This directional change had been anticipated, but had been delayed until the location of the footwall was less doubtful).

A barren structure was intersected near the beginning of the curve in the drift and followed for about 90 feet until it went into the right rib. The structure is a vertical brecciated zone 4 feet across with a foot in its center strongly oxidized and fractured. It continued into a pendant of sediments which appeared at 830 feet from the portal.

Where intersected by the drift, the sediments appear to be a limy, thin bedded shale exhibiting some alteration and silicification and minor amounts of pyrite are noted in bedding planes. The contact in the drift shows evidence of lateral movement relative to the porphyry. There is also some indication of movement parallel to bedding throughout the sediments. This body of sediments is fairly extensive as the drift has been in it for 100 feet and seems to be a synclinal fold as the bedding maintains a fairly uniform strike of N.80°W. with the dip increasing from 10°S. to 45°S. as the drift proceeds northward. No significant mineralization was encountered this period, although there was a slight increase in grade at about 874 feet from the portal.

A drill station was cut at 718 feet from the portal and 3 holes were drilled in each rib as follows:

Hole No.	Bearing	Inclination	Length
9	N.39°W.	- 5°	100'
10	N.39°W.	-30°	92'
11	N.40°W.	-45°	92'
12	S.40°E.	- 5°	100'
13	S.39°E.	-30°	100'
14	S.42°E.	-45°	92'
			576

RECEIVED
JAN 16 1963
U. S. G. S.
SPOKANE, WASH.

Assay returns are complete only on Hole No. 9 and show a slight anomaly from 8 to 12 feet from its collar. No other assay value are considered above background. Examination of cuttings show that the hole penetrated a thin band of sediments and was in porphyry for most of its length. Holes Nos. 10 and 11 showed some sediments near the collar, while Nos. 12, 13 and 14 were entirely in porphyry. Of course, it is difficult to determine geologic detail from such cuttings.

Mining conditions continued to be good. No timbering was necessary, and winter weather was unusually mild.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection
OME-6236 (Gold-Silver)
Northern Continental, Inc.
Gold Bug, et al., Claims
Phillips County, Montana
Contract 2148

The subject property was visited November 8, 1962, accompanied by Glenn Franklin, engineer-supervisor for the Operator. The last inspection was made August 29, 1962. The tunnel has been advanced a distance of 565 feet to the face, an advance of 370 feet since the last inspection. In addition to the timber reported in an interim inspection report dated September 5, 1962, timber has now been installed from 301 feet to 323 feet and from 376 feet to 429½ feet, for a total of 137 feet of timber, 75½ feet more than previously reported. At 505 feet in the drift, instead of long-holing as provided by the contract, the Operator has elected to drive crosscuts northerly and southerly at his own expense. The crosscut north is about 100 feet long, the one to the south about 75 feet. The rock in the face of the main drift appears to be a silicified porphyry consisting of fairly large crystals of feldspar in an extremely fine-grained stony groundmass. At the south side of the drift about 15 feet back from the face, a one-foot wide band of more highly silicified and vuggy material was sampled. It assayed 0.07 ounce gold and 2.4 ounces silver per ton.

Essentially the same type of material is exposed in the walls of the north crosscut and appears to have a width of at least 15 feet. Further into the crosscut there are two or three other bands of material of the same type. The Operator has sampled these, but the assays are not available as yet. Apparently a fault cuts across the main drift between 500 and 505 feet and may have offset the silicified zones seen further to the east. The crosscut to the south is for the most part in fairly fresh porphyry, tentatively classified as felsite porphyry. Mr. Franklin stated that if it is at all possible work will be continued throughout the winter.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

November 1962

Docket OME
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Linear advance of the main drift was less than usual this month, but the results accomplished were the most encouraging to date, to wit:

1. It seems quite certain that the Gold Bug vein system has been intersected.

2. 138 feet of crosscutting expanded knowledge of the character of the area along the strike of the drift.

3. Longholing done to date was successful and feasible from the standpoint of penetration and cuttings return.

4. Several significantly mineralized assays were taken.

A crosscut driven into the left rib at 520 feet from the portal cut an oxidized structure about 10 feet from the main drift. This structure strikes more or less parallel to the drift and dips northwesterly. It is evidently a fault or fissure filled with breccia fragments and cemented with limonite and iron oxides. The breccia has also been cemented by silicification. The structure itself appears to be the locii of a general breccia zone perhaps 20 feet wide. Width is difficult to determine as the degree of brecciation varies erratically. Assays did not indicate unusual amounts of mineralization, though the breccia zone is not completely barren.

As the main drift advanced, this structure entered it from the left hand side and gradually merged into the right hand rib. At about 615 feet from the portal the structure swing back into the drift to cut across it on a strike of about N 35°E. Brecciation and oxidation become more pronounced where the "vein" began to turn more northerly and it continued to exhibit strong brecciation about 5 feet wide until the vein was cut off at 655 feet by a normal fault which has a strike of N 53°E and dips 35°SE.

This fault is associated with a sizeable inclusion of sedimentary rock (shale?) which lies in the plane of the fault.

The left hand crosscut was driven 73 feet from the center of the drift, cutting minor faults, breccia zones and minor vein structure. None of this area was barren, but values were extremely low.

A crosscut driven 61 feet to the right did not intersect any conditions of positive interest. The porphyry is mostly blocky and dense, with fractures pretty well confined to the point pattern. Some alteration along fracture planes is noticeable but breccia, oxidation and silification are insignificant.

Eight longholes totalling 688 feet were drilled from the crosscuts. Return of cuttings, collection of samples and penetration rates seem to be satisfactory. Cuttings reveal very little useful geological information, but assays thereon seem to be suitably reliable for the purpose of checking for mineralization in the walls.

This longholing will not be invoiced as it doesn't conform to the layout specifications, and because it was primarily experimental at this time.

The portal of the old "400" level was opened and its 150 odd feet of length was inspected. It seems to follow a narrow structure parallel to the Gold Bug vein and about 135 feet in its hanging wall. A sample of the most impressive vein material indicates low grade ore. //

Mining conditions continued to be good for the most part. The drift did not require any timber this period, but thru most of the brecciated area length of rounds had to be reduced to 4 feet due to ravelly holes. Water conditions were unchanged.

Signature D.H. Macharen Title Acting Field Officer Date DEC 19 1962

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Date DEC 19 1962

(INSTRUCTIONS ON REVERSE)

REMARKS *(Cont.)*

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

October 1962

Docket OME 6236
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Advance this period was all in the porphyry, still following the structure intersected in September. The general strike is N 53½° E, which is the course of the adit. Dip averages about 70° northwest. This structure which began as a weak crack in the porphyry at about 250 feet from the portal has gradually become more pronounced until it has the appearance of a breccia zone 4½ feet wide with a fairly blocky, dense porphyry on the foot wall. The hanging wall is more gradational as the fractures creating the breccia branch into the rib and squeeze out.

When first intersected, the rocks associated with structure exhibited some alteration and a minor amount of sulfides were apparent as pyrite and marcasite, but there was no evidence of oxidation of the sulfides. For the last hundred feet oxidation has been present as coating on the breccia fragments. Unaltered sulfides are still visible.

Assays show that the unoxidized area is essentially barren along this structure. Very minor amounts of gold and silver occur in the oxidized zone. It is becoming apparent that this structure is a member of the Gold Bug system, but at present there isn't enough information developed to identify it as a "vein" previously mined on upper levels.

Mining conditions continue to be good in general, although a zone of blocky jointed ground had to be timbered. The face continually makes considerable water, but thus far the water drains down rapidly so that the back of the drift becomes practically dry in a few days.

Winter weather has not yet occurred, although there have been a few minor snowfalls.

Inasmuch as there is no practical method of separating samples which qualify for OME payment from those which do not, those invoiced are designated (✓) on the assay certificates though extraneous sample and assay data may appear on maps.

A crosscut was started on each side of the main drift to check the nature and attitude of the area in general. Although this work is not in the contract specifications, and will not be invoiced for, it is believed that considerable enlightening information may be derived therefrom. It is believed important at this stage to determine where the Gold Bug vein and associated structures are, and that this can best be accomplished by crosscutting. The future direction of the main drift is too critical to be determined from longhole data.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

September 1962

Docket OME 6236
Contract No. 14-23-090-2148
Gold Bug, Et Al., Phillips
County, Montana

A second shift was started on September 12 with some increase in the amount of monthly progress. The drift is well into the porphry, although an occasional pendant of sedimentary rock is encountered. A structure, parallel to and of similar nature to the southern outcrop of the Gold Bug, has been followed for about 160 feet. Inasmuch as the surface is only 80-90 feet in this area, and surface exposures are highly brecciated and obscured by overburden, its relationship with the Gold Bug will not be ascertained immediately. The structure is fairly weak, in places merely a crack in the porphry. It carries a minor amount of pyrite, and in a few places alteration has kaolinized a couple of inches on the hanging wall side of the crack. The footwall shows less effect of alteration.

The porphry has been bleached and in general the feldspar phenocrysts have been softened by alteration. The porphry is fine grained whose phenocrysts average 2 mm in diameter. The groundmass is massive and dense, white to light grey in color.

Mining conditions are still generally good. More water is being encountered; the drift drains an estimated 15 gallons per minute. Blocky ground has been timbered where joints and fractures intersect near the center of the back of the drift. The ribs have to be timbered under those circumstances also.

Some delay was experienced this month during repairs to the compressor. Winter weather conditions have not yet had an effect upon operations.

NARRATIVE REPORT

August 1962

Docket OME 6236
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

108 feet of drift was advanced on a single shift basis. About 90 feet of this advance appears to be in the main body of porphry, with weak structures parallel to the course of the drift appearing in the last 20 feet. These structures seem similar in attitude and nature to those indicated by previous surface excavation at the south end of the Gold Bug structure. They are associated with pyrite, gouge and some flourite. Assay returns are not yet available to verify extent of gold-silver mineralization.

Mining conditions continue to be good in general. The rock drills and breaks well, although jointing and shears require some timbering of the back and ribs. A minor amount of water has been encountered throughout the drift but doesn't hamper operations.

No assays will be invoiced until returns are received.

Several shifts were engaged in laying track on the dump, and making permanent installations for compressor, power plant and fan.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection
OME-6236 (Gold-Silver)
Northern Continental, Inc.
Gold Bug, et al., claims
Phillips County, Montana
Contract 2148

The subject property was visited August 29, 1962, accompanied by Roderigo Rigor, a Philippino trainee. Glen Franklin, Engineer-Supervisor of the project, had gone to Malta for supplies, but a contract miner and helper were present and were mucking out the drift.

An access road and portal site were completed. The tunnel had been advanced 195 feet. Three sets of timber were installed outside the brow of the tunnel, and six sets in the tunnel for a total of 44.5 feet. Three sets have also been installed from 133 feet to 150 feet for a total of 17 feet. Thus the total amount of timber installed to date is 61.5 feet. The respective sizes of air, water, and vent lines, rail, and timber all conform to contract specifications. The drift is being driven 8x8 in the clear of timber, exceeding the contract specification of 6x8.

Topographic conditions made it advisable to start the drift to one side of the vein zone, but as soon as blocky, faulted ground is passed the drift will be turned to get on the vein.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

NARRATIVE REPORT

July 1962

Docket: OME 6236
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips
County, Montana

Drifting advanced 98 feet on a single shift basis. Most of the rock was thin bedded, silicified shales striking at about a right angle to the course of the drift and dipping about 45° southwest. A porphry dike was crossed at about 40 feet from the portal. Weak faulting has occurred along the hanging wall side of the dike and timbering was installed from the brow of the portal to the dike.

No apparent mineralization has been found, although the dike carries minor amounts of pyrite and flourite. Some flourite is evident in portions of the more silicified shale. Historical accounts of this area link the presence of flourite to precious metal occurrences. Present knowledge indicates that there is a possibility that the contact between sediments and the porphry of the target area may be somewhat farther northeast than expected from surface mapping. The contact should be intersected in August, however.

No unusual conditions or events have been encountered. A small amount of water seeps from the back and floor of the drift.

No assays were submitted this period, although a few samples were taken to evaluate character and for familiarization with various rock types.

A building was erected for shop and change room, and a shed constructed to house the compressor and power generator. A small drift was driven in an adjacent hillside for powder storage.

NARRATIVE REPORT

June 1962

Docket: OME 6236
Contract No. 14-23-090-2148
Gold Bug, et al., Phillips County,
Montana

Construction of access road and portal site construction began on June 20, 1962 and by the end of the month excavation of the portal site permitted collaring the drift and the face was advanced 25 feet in oxidized sandstones which will require some timbering as soon as a brow is firmly established.

Road and portal site construction will be finished as drifting proceeds. The attached sketch indicates that the road location was changed from the original layout to facilitate construction, access and future traffic pattern.

Efforts to secure a D-8 bulldozer, or its equivalent, were begun May 28, but such a machine could not be procured except at prohibitive rates and transportation costs due to missile site construction, highway building programs and local construction in the area. Repetitive, heavy rains in Montana during May and June contributed to road washouts and agricultural activity, resulting in a heavy demand for such equipment. Therefore a D-6 bulldozer was procured following the lengthy delay and has performed satisfactorily.

This unit is operated at a cost of $12.50 per hour which has been converted to the equivalent rate of $15.00 per hour permitted under the contract for the accounting required on OME Forms 60 and 61.

No assays or sampling was done this month as all drifting was done in alluvium and oxidized sandstone exhibiting no visible mineralized structure. When the portal section of the drift intersects firm rock under sufficient back, its direction will be slightly altered to intersect the projection of the Gold Bug vein system.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.
