MANGANESE IN JANUARY 2004

In January, reported consumption of manganese ore containing 35% or more manganese, exclusive of that consumed at iron and steel plants, was estimated as 34,500 metric tons (t), which was a 6% increase from that for the previous month, according to the U.S. Geological Survey. This figure increases to 36,900 t when estimates for annual respondents are added on the basis of 2003 data. Corresponding industry stocks of ore at the end of the month were 143,000 t, which includes an estimate for annual respondents on the basis of 2003 data. This was a 6% decrease from the revised estimate of 152,000 t in December 2003. (Data for the most recent 13 months are plotted in the graph on figure 1.)

Foreign trade data for January will appear in a subsequent report. The data for December 2003 tabulated in this report indicate that the total exports, on a manganese content basis, increased by 9%, compared with those of November 2003, owing to a significant decrease in manganese ferroalloy and metal exports. Manganese imports, on a manganese content basis, were about double those of November, based on significant increases in all imports of manganese materials.

On January 5, the U.S. Environmental Protection Agency (EPA) issued final national emission standards for hazardous air pollutants (HAPs) for lime manufacturing plants, including those captive plants at iron and steel mills. One of the major metallic HAPs from these plants is manganese. EPA will use particulate matter (PM) as a surrogate limit for the metal HAPs. The PM limits are: 0.12 pounds PM per ton of stone feed (lb/tsf) for kilns using dry pollution control systems prior to January 5, 2004; 0.60 lb/tsf for kilns using wet scrubbers prior to January 5, 2004; 0.10 lb/tsf for new kilns and lime coolers; and 0.05 grams PM per dry standard cubic meter PM and 7% opacity for process stone handling operations that vent emissions to the atmosphere. Stack emissions from process stone handling operations that are controlled by wet scrubbers are not subject to the opacity limit (U.S. Environmental Protection Agency, 2004).

Update

On March 1, the International Trade Administration (ITA), U.S. Department of Commerce, extended the time limit for the

final results of its antidumping duty administrative review on silicomanganese imports from Brazil during the period December 1, 2001, through November 30, 2002. The new deadline is March 16 (International Trade Administration, 2004b).

On March 2, the ITA terminated its antidumping duty investigation of electrolytic manganese dioxide from Australia, Greece, Ireland, Japan, and South Africa. The antidumping duty investigation was terminated based on Kerr McGee Chemical, LLC's withdrawal of its antidumping petitions filed on July 31, 2003 (International Trade Administration, 2004a). The U.S. International Trade Commission ended its corollary antidumping duty investigation on March 9 (U.S. International Trade Commission, 2004).

On March 16, the Defense National Stockpile Center announced the cash disposal of 6,740 t of ferromanganese in response to Solicitation for Offers DLA-Ferromanganese-003, Amendment 007, to BSI Commodities, Inc., Pittsburgh, PA. This sale exhausted the FY 2004 Annual Materials Plan authorized quantity for ferromanganese (Defense National Stockpile Center, 2004).
