DIAMOND DRILL HOLE NO. DMM - 1

Footage	Remarks
0 - 10	Collared in fairly hard aplite. Good core recovery, milky sludge.
10 - 25	Very broken. 50% core recovery, milky sludge.
25 - 30	Harder rock. 95% core recovery, milky sludge.
30 - 35	Very hard rock. 100% core recovery.
35 - 40	Very hard and broken. 40% core recovery, milky sludge.
40 - 60	Softer rock with hard streaks. 25% core recovery.
60 - 65	Very soft and broken with hard streaks. Milky sludge.
65 - 70	Rock harder and fractured. 75% core recovery, milky sludge.
70 - 75	Soft rock with hard streaks, very broken. 60% core recovery, milky sludge.
75 - 80	Soft and broken rock. 60% core recovery, milky blue sludge.
80 - 85	Hard and broken rock. 95% core, milky blue sludge.
85 - 100	Very soft and caving. No core, milky blue sludge.
100-110	Soft and caving. 10% core, milky sludge.
110-120	Harder and broken rock. 60% core recovery, milky sludge.
120-135	Very hard rock. 85% core recovery, milky sludge.
135-140	Very hard rock. 90% core recovery, milky blue sludge. Hole caving, lots of sludge.
140-145	Hard and broken granite. 90% core recovery, milky blue sludge.
145-150	Medium hard, broken granite. 40% core recovery, milky sludge.
150-160	Very hard, broken granite. 70% core recovery, milky sludge.

Driller's Notes - page 2

160-161	Core blocked. Very hard and broken.
161-165	Hard granite. 90% core recovery, milky sludge.
165-170	Softer rock, some sulfides. 50% core recovery, blue-grey sludge.
170-175	Soft and broken rock. 40% core recovery, bluish sludge.
175-185	Soft and broken rock. 5 - 10% core recovery, grey sludge.
185-190	Harder rock. 50% core recovery, grey sludge.
190-192	Fairly hard, broken rock. Core blocked. 30% core recovery, milky sludge.
192-195	Fairly hard rock. 1% core; ground core.
195-196	Hard rock, core blocked. 1% core recovery, milky sludge.
196-198	Hard rock. 80% core recovery, milky sludge.
198-200	Hard rock, core blocked. No core recovery, milky sludge.
200-205	Medium hard, broken rock. 60% core recovery, milky sludge.
205-209	Soft rock with hard broken streaks. 30% core recovery, milky sludge. Core blocked.
209-215	Hard rock with soft streaks. 65% core recovery, milky sludge.
215-220	Hard rock with soft streaks. 25% core recovery, milky sludge.
220-240	Medium hard rock. 100% core, grey sludge.
240-245	Softer rock. 40% core recovery, blue sludge, some gouge.
245-250	Medium soft rock. 95% core recovery, grey sludge.
250-280	Very soft rock, with gouge. 0-5% core recovery, blue-grey sludge.
280-310	Soft and broken rock. 5-30% core recovery, grey sludge.
310-313	Medium hard rock, with gouge. 35% core recovery, milky grey sludge.
313-318	Extremely hard rock. 30% core recovery, milky grey sludge.

318-330	Soft rock with hard streaks. 15% core recovery, milky grey sludge.
330-340	Very soft, gouge. No core, blue-grey sludge.
340-350	Soft and broken rock. No core recovery, grey sludge.
350-352	Core blocked.
352-360	Soft and broken rock. 5% core recovery, milky grey sludge.
360-370	Soft and broken rock. 20% core recovery, milky grey sludge.
370-390	Soft and gouey rock. 20% core, grey sludge.
390-400	Soft and gouey rock. 40% core, grey sludge.

Finish: 10/15/52 Helper: Berkell

DIAMOND DRILL HOLE No. [illegible] - 2

Footage	Remarks
0 - 10	Good core recovery, milky sludge
10 - 35	Soft and broken rock. Poor core recovery, milky sludge
35 - 39	Rhyolite dike at approximately 37 feet. Fair core recovery, milky sludge
39 - 45	Rhyolite dike. Milky sludge, good core recovery
45 - 50	Rhyolite dike. Milky sludge, fair core recovery
50 - 70	Very soft rock. Very poor core recovery, milky sludge
70 - 90	Very soft rock. Very poor core recovery, blue to grey sludge. Hole caving at 75 feet.
90 -110	Very soft rock. Fair to poor core recovery, grey sludge. Hole caving at 75 feet.
110-120	Very soft and gouge rock. Poor core recovery, grey to white sludge.
120-190	Very soft and gouge rock. Very poor core recovery, large quantities white sludge -- hole washing. Cased to ex at 175 feet.
190-209	Very soft and gouge rock. Very poor core recovery, grey sludge. Hole making some water.
209-235	Lamprophyre dike and altered granite. Poor to fair core recovery. Sludge varies in color -- blue, grey and white. Apparently dike stringers with gouge and altered granite in between.
235-249	Fresh granite. Poor to fair core recovery, milky grey sludge.

End of hole at 196 ft.

Note: All assays are sludge assays. Trace and nil values of SO_3 determined by lemping. All core and sludges lamped.

DRILLER'S NOTES

Date Start: 10/17/52 Driller: Manning

Finish: 10/23/52 Helper: Carroll

DIAMOND DRILL HOLE NO. DDH - 3

Footage	Remarks
0 - 10	Rhyolite dike. Good core recovery, milky sludge
10 - 20	Altered granite. Good core recovery, milky sludge
20 - 30	Very soft altered granite. Poor core recovery, grey sludge
30 - 40	Soft and broken altered granite. Excellent core recovery, milky to blue-grey sludge
40 - 70	Soft and broken rock, with gouge. Good core recovery, grey to milky sludge
70 - 154	Very soft and gouge rock. Poor core recovery, milky sludge
154-160	Lamprophyre dike at 154 ft. Core blocked. Fair core recovery, milky sludge. Hole caving and washing from 130 to 140 ft.
160-180	Fault. Practically no core recovery, milky sludge. Hole caving badly from 145 feet. Cased Ex to 150 feet.
180-190	Soft altered granite. Very little core recovery, milky sludge. Hole making water, silted in from 70 feet on.
190-196	Fault -- soft altered granite. Poor core recovery, milky sludge. Hole caved in completely at 155 feet.

Date Start: 10/31/52 Driller: Manning
Finish: 11/20/52 Helper: Berkell

Diamond Drill Hole No. DDH 4

Footage	Remarks
0 - 10	Fair core recovery, very broken fresh granite, no sludge saved. Cased to 8x.
10 - 25	Fair core recovery, mainly fresh granite, very broken. Milky sludge.
25 - 30	Poor core recovery, very broken granite, milky sludge.
30 - 35	Good core recovery. Very hard and brittle granite and aplite, milky sludge. Core blocked at 34 ft.
35 - 47	Fair core recovery. Very hard stringers, milky sludge.
47 - 50	Much softer, sludge turned blue-grey; gouge.
50 - 55	Fair core recovery. Medium hard, milky sludge.
55 - 75	Good core recovery, hard altered granite, blue sludge.
75 - 85	Fair core recovery. Soft rock, with gouge. Grey to milky sludge. Cased to 8x at 85 ft.
85 -110	Very poor core recovery. Soft and gouey rock, blue to grey sludge. Caving at 103 ft.
110-112	Gouge. Hole caved; cemented.
112-120	No core recovery. Gouge, grey sludge.
120-130	Good core recovery. Medium hard granite, milky grey sludge.
130-140	Poor core recovery. Soft and broken granite, milky grey sludge.
140-150	Fair core recovery. Medium hard and broken rock, milky grey sludge.
150-170	Poor core recovery. Very soft and gouey, milky grey sludge.
170-180	Good core recovery. Medium hard granite, milky sludge.
180-210	Poor core recovery. Soft and gouey granite, milky sludge. Hole caving at 100 and 190 feet.
210-220	Fair core recovery. Fresh granite, milky grey sludge. Hole caving badly; cemented.

Footage	Remarks
220-230	Good core recovery. Fresh granite with some gouge. Milky grey sludge.
230-240	Poor core recovery. Very broken and gouey, milky blue and grey sludge. Hole caving, sand in bottom.
240-245	Very good core recovery. Fresh granite, blue and grey sludge. Hole caving.
245-255	Fair core recovery. Medium soft and gouey fresh granite. Milky grey sludge.
255-270	Good core recovery. Medium hard fresh granite, milky sludge.
270-280	Poor core recovery, milky sludge. Lost some core when rods were pulled. Sand in hole.
280-290	Fair core recovery. Fresh granite, milky sludge.
290-296	Poor to fair core recovery. Fresh granite, milky sludge.

Marshall Hill Shaft No. Hole-2

Driller's Notes

Date Start: 11/24/52
Finish: 5/13/53
(Drilling suspended from 11/30/52 to 5/3/53)

Driller: Gavin
Helper: Darnell

Footage	Remarks
0 -10	Fair core recovery, fresh granite. No sludge saved. Cased to 11 at 10 ft.
10-20	Fair core recovery, slightly altered granite, very broken. Milky sludge.
20-30	Fair core recovery, fresh granite, very soft with gouge. Hit large stream of water at 25 ft. Milky sludge.
30-39	Fair core recovery, fresh granite, medium soft with gouge streaks. Very broken. Milky sludge. Some caving at 35 ft.
39-50	Better poor core recovery. Fresh granite and aplite, very broken. Milky sludge.
50-60	Fair core recovery, broken fresh granite, milky sludge.
60-80	Good core recovery, broken fresh granite, milky sludge.
80-100	Fair core recovery, broken fresh granite and aplite, milky sludge.
100-110	Very poor recovery, soft and broken fresh granite and aplite, milky sludge.
110-119	Good core recovery, harder and very broken fresh granite and aplite, a little altered granite. Milky sludge.
119-130	Very poor core recovery. Medium hard broken granite and aplite, a little altered granite. Milky sludge. Hit another stream of water; hole is making lots of water.
130-137	Poor core recovery, granite and aplite, hard rock -- core blocked, ground up some core. Milky sludge.
137-140	Very good core recovery, granite and aplite, milky sludge.
140-160	Good core recovery, fresh granite, milky grey sludge. Cased to 11 at 160 ft.
160-170	So core recovery, very soft. Milky grey sludge.
170-180	Poor core recovery, very soft granite. Milky grey sludge.
180-190	Very poor core recovery, very soft and gouge. Milky grey sludge.

DDH-5 Driller's Notes - page 3

Footage	Remarks
190-200	Practically no core recovery, soft, aplite, milky gray sludge.
200-201	Very good core recovery. Soft aplite with sulfides. Milky blue sludge.
201-210	Very good core recovery. Aplite and sulfides at 207 ft. Light blue to light gray sludge. Hit water course.
210-220	Very good core recovery. Some sulfides, mostly aplite. Light gray sludge. Lots of water.
220-223	Very good core recovery. Course. Gray sludge. Core blocked. Hole taking more water.
223-231	Very good core recovery. Altered granite and aplite, hard. Milky sludge, few sulfides.
231-240	Very good core recovery. Some sulfides and some gouge. Milky blue sludge.
240-250	Fair core recovery. Aplite, fresh granite, altered granite, some sulfides. Milky and light blue sludge.
250-260	Excellent core recovery. Aplite and altered granite, may be some sulfides. Milky blue sludge. Hole is caving from 240 to 250 feet.
260-270	Good core recovery. Aplite and altered granite. Milky blue sludge.
270-280	Practically no core recovery. Soft. Milky sludge.
280-306	Fair to excellent core recovery. Aplite and fresh granite. Milky sludge.
306-316	Fair core recovery. Fresh granite. Milky sludge. Some gouge streaks. Has partially blocked so must have ground up some core.
316-345	Good to excellent core recovery. Fresh granite. Milky sludge.

DDH-6 Driller's Notes - Page 2

Footage	Remarks
241-256	Fair to good core recovery. Fresh granite. Hole caving at 229 ft. Cased to 22 at 256 ft.
256-271	Rather poor core recovery. Fresh granite and aplite, very soft most of run. Grey sludge.
271-289	Good core recovery. Hard and broken fresh granite, very little gouge. Milky-grey ~~gouge~~ sludge.
289-315	Poor core recovery. Fresh granite, more gouge. Milky-grey sludge.
315-350	Poor core recovery. Fresh granite, some aplite and gouge. Milky sludge.
	End of hole.

[illegible] DRILL HOLE NO. DMA-6

Driller's Notes

Date Start: 5/25/53 Driller: Manning

Finish: 5/27/53 Helper: Parnell

Footage	Remarks
0 - 10	Very good core recovery. Fresh and slightly altered granite. Milky sludge. Cased to 8A at 10 ft.
10-21	Fair core recovery. Mostly altered granite; rock is gretter softer. Bluish-grey sludge.
21-31	Fair core recovery. Altered granite and quartz. Blue-grey sludge.
31-41	Poor core recovery. Granite crs; very soft. Blue-grey sludge.
41-51	Poor core recovery. Altered granite. Blue-grey sludge.
51-58	Good core recovery. Harder, aplite and fresh granite. Milky sludge.
58-82	Very good core recovery. Very hard fresh granite, some aplite. Milky sludge.
82-101	Good core recovery. Fresh granite and aplite, harder. Milky sludge.
101-107	Poor core recovery. Fresh granite and aplite; very soft with rough seams. Grey sludge.
107-115	Poor to good core recovery. Aplite and gouge. Grey sludge.
115-131	Poor to good core recovery. Hard aplite. Milky sludge. Core blocked several times.
131-141	Fair core recovery. Fresh granite; softer. Grey sludge.
141-149	Fair core recovery. Fresh granite and aplite. Milky sludge.
149-161	Poor core recovery. Aplite and gouge. Poor sludge.
161-190	Fair to good core recovery. Fresh granite. Milky-grey sludge.
190-211	Very poor core recovery. Fresh granite and gouge. Milky-grey sludge.
211-221	No core recovery. Pale and gouge. Milky-grey sludge.
221-241	Poor core recovery. Slightly altered granite and gouge. Blue-grey sludge.

[illegible] Drill Hole No. [illegible]-13

Driller's Notes

Date Start: 3/11/54
Finish: 4/4/54

Driller: Manning
Helpers: Washington, Barkell

Footage	Remarks
0 - 10	Aplite and fresh granite. No sludge.
10- 25	" " " " Milky sludge.
25 - 40	Fresh granite. Grey sludge.
40 - 62	Fresh granite and aplite. Milky sludge.
62 - 69	Fresh granite and aplite; very broken and soft with gouge. Milky sludge.
69 - 75	Fresh granite; harder. Milky grey sludge.
75 - 79	Aplite and gouge. Milky sludge.
79 - 86	Fresh granite with a few altered seams; some sulfides. Milky grey sludge. Hit gouge seam and blocked at 84 ft.
86 - 90	Aplite, milky sludge.
90 -109	Altered granite; sulfides. Blue-grey sludge.
109-110	Some altered granite; very broken with gouge seams. Milky grey sludge.
110-115	Very soft and broken. Gouge. Milky to grey sludge.
115-120	Very soft and broken; some sulfides. Blue-grey sludge.
120-125	Altered granite. Grey sludge.
125-138	Altered granite; soft and gouey. Blue-grey sludge.
138-145	Fresh granite; gouge. Milky sludge.
145-150	Very soft; sulfides. Grey sludge.
150-152	Slightly altered granite. Bluish-grey sludge.
152-154	Aplite and fresh granite. Grey sludge.
154-160	Fresh granite; hard and broken. Milky sludge.
160-168	" " " " " Grey sludge.
168-174	Very hard fresh granite. Milky sludge.

Footage	Remarks
174-188	Very hard fresh granite. Grey sludge.
188-194	Fresh and altered granite with gouge; softer. Milky grey to blue grey sludge.
194-200	Altered granite and gouge. Blue sludge.
200-205	Fresh and altered granite and gouge. Blue sludge.
205-217	Altered granite; gouge; soft and broken. Blue sludge.
217-220	Medium hard altered granite. Blue sludge.
220-224	Hard altered granite and quartz. Blue sludge.
224-235	Altered to fresh granite. Grey sludge.
235-257	Fresh granite. Grey sludge.
257-260	Slightly altered granite. Grey and bluish grey sludge.
260-270	Soft and gouey altered granite. Grey sludge.
270-280	Fresh granite; gouge. Milky sludge.
280-290	Harder fresh granite; less gouge. Milky sludge.
290-300	Fresh granite; gouge zones. Grey sludge.
300-305	Slightly altered granite. Blue-grey sludge. Hole caving 295-305 ft. Soft and gouey.
305-310	Fresh granite. Harder and not so broken. Some gouge. Grey sludge.
310-330	Fresh granite; hard. Grey sludge.
330-355	Fresh granite; some gouge. Grey sludge.
355-365	Fresh granite; some gouge. Milky grey sludge.
365-400	Fresh granite; some gouge. Milky sludge.

Last 36 ft. drilled very soft and there were some indications of quite a bit of grey talc and gouge.

End of hole.

Footage	Remarks
0 - 10	Fresh granite. No sludge
10 - 15	Altered granite. Sulfides. Milky sludge.
15 - 25	Fresh granite. Milky sludge.
25 - 30	Fresh to altered granite. Milky sludge.
30 - 35	Altered granite. Grey sludge.
35 - 40	Slightly altered. Very hard and broken with some gouge seams. Milky sludge.
40 - 55	Slightly altered. Hard and broken. Milky sludge.
55 - 60	Slightly altered. Very soft and gouey. Milky sludge.
60 - 70	Fresh granite. Soft and gouey. Milky sludge.
70 - 75	Altered granite with sulfides. Soft. Milky-blue sludge.
75 - 80	Altered granite. Very soft. Milky sludge. Hole caving at 78 ft.
80 - 85	Fresh granite. Very soft. Milky sludge.
85 - 90	Aplite and gouge. Very soft. Milky sludge.
90 - 95	Fresh granite and aplite. Milky sludge. Hole caving at 92 ft.
95 -100	Fresh granite. Milky sludge.
100-105	Granite and aplite. Gouge seams. Greyish sludge. Hole cased from 75 ft. Drilled 30 ft. to bottom and cemented. Used 100 lbs. cement.
	Bit caught at 53 ft. Drilled 53 ft. cement. Placed by quite a bit of cave in cement from 70 to 90 ft. Some cave at 100 to 105 ft.
105-110	Altered granite and gouge seams. Greyish sludge.
110-115	Altered granite and quartz. Some schedlite. Milky sludge.

DIAMOND DRILL HOLE NO. DMA-27

Driller's Notes

Date Start: 7/23/54 Driller: Manning, Parkell

Finish: 8/10/54 Helper: Ross, Smith

Footage	Remarks
115-120	Fresh granite and aplite. Some gouge. Milky sludge.
120-125	Fresh granite and aplite. Some scheelite. Milky sludge.
125-130	Aplite and gouge seams. Greyish sludge.
130-135	Practically no core. Gouge. Lots of grey sludge. Hole is caving at 100 to 110 ft. and from 135 ft.
135-140	Fresh granite and aplite. Some gouge and sand. Milky sludge. Have lacked 12 to 18 inches of getting to bottom each run.
140-145	Fresh granite. Medium hard, broken. Hole still caving some. Milky sludge.
145-150	Fresh granite. Milky sludge. Washed 3 ft. to bottom. Lots of sludge.
150-155	Fresh granite and aplite. Milky sludge. Washed 3 ft. to bottom. Lots of sludge.
155-160	Fresh granite and aplite. Milky sludge. Washed 18 inches to bottom.
160-165	Fresh granite and aplite. Greyish sludge.
165-170	Aplite. Washed 2 ft. to bottom.
170-175	Aplite. Washed 6 ft. to bottom.
175-200	Fresh granite and sand. Lots of grey sludge. Hole caving in several places: 140 to 155 ft. and was caved tight at 180 ft. Had to wash and drill 17 ft. to get to bottom. Had trouble pulling and couldn't get back in beyond 182 ft. Washed hole and cemented approximately 65 ft. Cement did not set. Cleaned hole and put in two sacks of cement. Hit cement and cave at 110 ft. Not set up. Had trouble getting out of hole from 145 to 150 ft. End of hole.

THE TOPOGRAPHIC MAPS OF THE UNITED STATES

The United States Geological Survey is making a series of standard topographic maps to cover the United States. This work has been in progress since 1882, and the published maps cover more than 47 percent of the country, exclusive of outlying possessions.

The maps are published on sheets that measure about 16½ by 20 inches. Under the general plan adopted the country is divided into quadrangles bounded by parallels of latitude and meridians of longitude. These quadrangles are mapped on different scales, the scale selected for each map being that which is best adapted to general use in the development of the country, and consequently, though the standard maps are of nearly uniform size, the areas that they represent are of different sizes. On the lower margin of each map are printed graphic scales showing distances in feet, meters, miles, and kilometers. In addition, the scale of the map is shown by a fraction expressing a fixed ratio between linear measurements on the map and corresponding distances on the ground. For example, the scale $\frac{1}{62,500}$ means that 1 unit on the map (such as 1 inch, 1 foot, or 1 meter) represents 62,500 of the same units on the earth's surface.

Although some areas are surveyed and some maps are compiled and published on special scales for special purposes, the standard topographic surveys and the resulting maps have for many years been of three types, differentiated as follows:

1. Surveys of areas in which there are problems of great public importance—relating, for example, to mineral development, irrigation, or reclamation of swamp areas—are made with sufficient detail to be used in the publication of maps on a scale of $\frac{1}{31,680}$ (1 inch = one-half mile) or $\frac{1}{24,000}$ (1 inch = 2,000 feet), with a contour interval of 1 to 100 feet, according to the relief of the particular area mapped.

2. Surveys of areas in which there are problems of average public importance, such as most of the basin of the Mississippi and its tributaries, are made with sufficient detail to be used in the publication of maps on a scale of $\frac{1}{62,500}$ (1 inch = nearly 1 mile), with a contour interval of 10 to 100 feet.

3. Surveys of areas in which the problems are of minor public importance, such as much of the mountain or desert region of Arizona or New Mexico, and the high mountain area of the northwest, are made with sufficient detail to be used in the publication of maps on a scale of $\frac{1}{125,000}$ (1 inch = nearly 2 miles) or $\frac{1}{250,000}$ (1 inch = nearly 4 miles), with a contour interval of 20 to 250 feet.

The aerial camera is now being used in mapping. From the information recorded on the photographs, planimetric maps, which show only drainage and culture, have been made for some areas in the United States. By the use of stereoscopic plotting apparatus, aerial photographs are utilized also in the making of the regular topographic maps, which show relief as well as drainage and culture.

A topographic survey of Alaska has been in progress since 1898, and nearly 44 percent of its area has now been mapped. About 15 percent of the Territory has been covered by maps on a scale of $\frac{1}{500,000}$ (1 inch = nearly 8 miles). For most of the remainder of the area surveyed the maps published are on a scale of $\frac{1}{250,000}$ (1 inch = nearly 4 miles). For some areas of particular economic importance, covering about 4,300 square miles, the maps published are on a scale of $\frac{1}{62,500}$ (1 inch = nearly 1 mile) or larger. In addition to the area covered by topographic maps, about 11,300 square miles of southeastern Alaska has been covered by planimetric maps on scales of $\frac{1}{125,000}$ and $\frac{1}{250,000}$.

The Hawaiian Islands have been surveyed, and the resulting maps are published on a scale of $\frac{1}{62,500}$.

A survey of Puerto Rico is now in progress. The scale of the published maps is $\frac{1}{30,000}$.

The features shown on topographic maps may be arranged in three groups—(1) water, including seas, lakes, rivers, canals, swamps, and other bodies of water; (2) relief, including mountains, hills, valleys, and other features of the land surface; (3) culture (works of man), such as towns, cities, roads, railroads, and boundaries. The symbols used to represent these features are shown and explained below. Variations appear on some earlier maps, and additional features are represented on some special maps.

All the water features are represented in blue, the smaller streams and canals by single blue lines and the larger streams by double lines. The larger streams, lakes, and the sea are accentuated by blue water lining or blue tint. Intermittent streams—those whose beds are dry for a large part of the year—are shown by lines of blue dots and dashes.

Relief is shown by contour lines in brown, which on a few maps are supplemented by shading showing the effect of light thrown from the northwest across the area represented, for the purpose of giving the appearance of relief and thus aiding in the interpretation of the contour lines. A contour line represents an imaginary line on the ground (a contour) every part of which is at the same altitude above sea level. Such a line could be drawn at any altitude, but in practice only the contours at certain regular intervals of altitude are shown. The datum or zero of altitude of the Geological Survey maps is mean sea level. The 20-foot contour would be the shore line if the sea should rise 20 feet above mean sea level. Contour lines show the shape of the hills, mountains, and valleys, as well as their altitude. Successive contour lines that are far apart on the map indicate a gentle slope, lines that are close together indicate a steep slope, and lines that run together indicate a cliff.

The manner in which contour lines express altitude, form, and grade is shown in the figure below.

The sketch represents a river valley that lies between two hills. In the foreground is the sea, with a bay that is partly enclosed by a hooked sand bar. On each side of the valley is a terrace into which small streams have cut narrow gullies. The hill on the right has a rounded summit and gently sloping spurs separated by ravines. The spurs are truncated at their lower ends by a sea cliff. The hill at the left terminates abruptly at the valley in a steep scarp, from which it slopes gradually away and forms an inclined tableland that is traversed by a few shallow gullies. On the map each of these features is represented, directly beneath its position in the sketch, by contour lines.

The contour interval, or the vertical distance in feet between one contour and the next, is stated at the bottom of each map. This interval differs according to the topography of the area mapped: in a flat country it may be as small as 1 foot; in a mountainous region it may be as great as 250 feet. In order that the contours may be read more easily certain contour lines, every fourth or fifth, are made heavier than the others and are accompanied by figures showing altitude. The heights of many points—such as road intersections, summits, surfaces of lakes, and benchmarks—are also given on the map in figures, which show altitudes to the nearest foot only. More precise figures for the altitudes of benchmarks are given in the Geological Survey's bulletins on spirit leveling. The geodetic coordinates of triangulation and transit-traverse stations are also published in bulletins.

Lettering and the works of man are shown in black. Boundaries, such as those of a State, county, city, land grant, township, or reservation, are shown by continuous or broken lines of different kinds and weights. Public roads suitable for motor travel the greater part of the year are shown by solid double lines; poor public roads and private roads by dashed double lines; trails by dashed single lines. Additional public road classification if available is shown by red overprint.

Each quadrangle is designated by the name of a city, town, or prominent natural feature within it, and on the margins of the map are printed the names of adjoining quadrangles of which maps have been published. More than 4,100 quadrangles in the United States have been surveyed, and maps of them similar to the one on the other side of this sheet have been published.

Geologic maps of some of the areas shown on the topographic maps have been published in the form of folios. Each folio includes maps showing the topography, geology, underground structure, and mineral deposits of the area mapped, and several pages of descriptive text. The text explains the maps and describes the topographic and geologic features of the country and its mineral products. Two hundred twenty-five folios have been published.

Index maps of each State and of Alaska and Hawaii showing the areas covered by topographic maps and geologic folios published by the United States Geological Survey may be obtained free. Copies of the standard topographic maps may be obtained for 10 cents each; some special maps are sold at different prices. A discount of 40 percent is allowed on an order amounting to $5 or more at the retail price. The discount is allowed on an order for maps alone, either of one kind or in any assortment, or for maps together with geologic folios. The geologic folios are sold for 25 cents or more each, the price depending on the size of the folio. A circular describing the folios will be sent on request.

Applications for maps or folios should be accompanied by cash, draft, or money order (not postage stamps) and should be addressed to
