FINAL INSPECTION REPORT

DMEA-4580, Idm-E1088 (Zinc)

Operator: B. H. Putnam, Thorn Hill, Tennessee, Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	Total
Number of holes	12 ✓	97X 91
Footage	5,376 ✓	47,844 X 47,838'
Reamed	51(?)*	1,308 *

*Record not clear without access to driller's invoice.

22 holes reamed 1,256' through first 22 holes

Number of holes showing:

a) Commercial-grade zinc ore . . . . . 12 ✓
b) Non-commercial zinc mineralization 51
c) No zinc mineralization 34

Data available on the 12 holes completed since the last previous inspection are summarized as follows:

✓ Hole AJ-1: Located on Austin Johnson property at coordinates: N-47,341; E-41,556. Collar elevation: 1,546 feet AT. Drilling started: 5-9-60; completed: 5-13-60. Total depth: 350 feet. Summary log: 0-90 overburden; 90-347(?) Kingsport formation (TR @ 243); 347-350 Longview dolomite. Mineralization: Barren--no zinc; 35% pyrite @ 286-288; 2% pyrite @ 288-307.

✓ Hole AC-1: Located on Pryor Acuff tract at coordinates: N-47,447; E-42,463 (400 feet down-dip from Hole JA-5). Collar elevation: 1,426 feet AT. Drilling started : (?); completed: 5-13-60. Total depth: 626 feet. Summary log: 0-53 overburden; 53-330 Mascot dolomite; 330-596 Kingsport formation (TR @ 500); 596-626 Longview dolomite. Mineralization: Shine hole---464-465 (1') 2% Zn (est); 483-483½ (1/2') 2% Zn (est).

✓ Hole JA-10: Located on Elvin Jackson tract at coordinates: N-47,671; E-42,063 (200 feet NE on strike from Hole JA-4). Collar elevation: 1,510 feet AT. Drilling started: 5-13-60; completed: 5-23-60. Total depth: 452 feet. Summary log: 0-118 overburden; 118-399 Kingsport formation (TR @ 306); 399-452 Longview dolomite. Mineralization: Barren hole---no zinc; local strong shines of pyrite 145-292; 7% pyrite

@ 306-316; 10% pyrite @ 321-322; 5% pyrite @ 339-344; 2% pyrite @ 360-393; local shines of pyrite @ 423-424, 433, 435.

Hole JA-11: Located on Elvin Jackson tract at coordinates: N-47,007; E-41,783 (approximately 400 feet down-dip from Hole AJ-1). Collar elevation: 1,450 feet AT. Drilling started: 5-14-60; completed 5-21-60. Total depth: 630 feet. Summary log: 0-48 overburden; 48-309 Mascot dolomite; 309-592(?) Kingsport formation (TR @ 463): 592(?) - 630 Longview dolomite. Mineralization: Trace hole---trace of ZnS @ 89; local heavy pyrite @ 191-590 reaching as much as 15 - 20% in 1-foot runs.

Hole JA-12: Located on Elvin Jackson tract at coordinates: N-47,615; E-41,979 (midway between Holes JA-4 and -10). Collar elevation: 1,523 feet AT. Drilling started: 5-23-60; completed: 5-31-60. Total depth: 413 feet. Summary log: 0-103 overburden; 103-373 Kingsport formation (TR @ 259); 373-413 Longview dolomite. Mineralization: Shine hole---shines of ZnS @ 188, 189-191, 195, 199, 204, and 205; 208-209 (1') 3% Zn (est); shine @ 217, trace of ZnS @ 284. Local very strong shines of pyrite @ 199 - 413.

Hole BR-1: Located on S. S. Breeding tract at coordinates: N-48,488; E-43,277 (400 feet NE on strike from Hole CO-6). Collar elevation: 1,522 feet AT. Drilling started: 5-26-60; completed: 6-2-60. Total depth: 325 feet. Summary log: 0-49 overburden; 49-294 Kingsport formation (TR @ 184); 294-325 Longview dolomite. Mineralization: Barren hole---no zinc; local heavy pyrite shines @ 163, 195, 211, 218, 247, and 257.

Hole BR-2: Located on S. S. Breeding tract 200 feet NE on strike from Hole BR-1. Coordinates and collar elevation not yet available. Drilling started: 6-2-60; completed: 6-8-60. Total depth: 400 feet. Summary log: 0-89 overburden; 89-372 Kingsport formation (TR @ 279(?)); 372-400 Longview dolomite. Mineralization: Barren--no zinc; pyrite shines @ 279 and 286.

Hole JA-13: Located on Elvin Jackson tract 100 feet SW on strike from Hole JA-4. Coordinates and collar elevation not yet available. Drilling started: 5-31-60; completed: 6-6-60. Total depth: 481 feet. Summary log: 0-88 overburden; 88-386 Kingsport formation (TR @ 279); 386-481 Longview dolomite. Mineralization: Shine hole--shines of ZnS @ 186, 258, and 399. Much pyrite as follows: 210-251 (41') 6%; 267-272 (5') 4%; 277-284 (7') 2%; 285-316 (31') 3%; 317-371 (4') 2%; 390-420 (30') ½%.

Hole JA-14: Located on Elvin Jackson tract 200 feet up-rake from Hole JA-11 toward JA-7. Coordinates and collar elevation not yet available. Drilling started: 6-7-60; completed: 6-15-60. Total depth: 560 feet. Summary log: 0-55 overburden; 55-264 Mascot dolomite; 264-526 Kingsport formation (TR @ 436): 436-560 Longview dolomite. Mineralization: Barren---no zinc; core well-brecciated and shows heavy pyrite in scattered strong shines @ 197-547.

Hole MG-6: Located on McGinnis tract 400 feet SW of Hole MG-3. Coordinates and collar elevation not yet available. Drilling started: 6-8-60; completed: 6-20(?)-60. Total depth: 350 feet. Summary log: 0-40 overburden; 40-323½ Kingsport formation (TR @ 229); 323½-350 Longview dolomite. Mineralization: Barren hole.

Hole JA-15: Located on Elvin Jackson tract 100 feet down-dip from Hole JA-5. Coordinates and collar elevation not yet available. Drilling started: 6-16-60; completed: 6-23-60. Total depth: 450 feet. Summary log: 0-46 overburden; 46-151 Mascot dolomite; 151-436(?) Kingsport formation (TR @ 338); 436(?)-450 Longview dolomite. Mineralization: Shine hole---shines of ZnS @ 205, 290½, and 368. Local strong shine of pyrite 118-184, 210-251, 336-411, 419-426, and 446-450.

Hole JA-16: Located on Elvin Jackson tract 200 feet NE on strike from Hole JA-5. Coordinates and collar elevation not yet available. Drilling started: 6-20(?)-60; completed: 6-28-60. Total depth: 339 feet. Summary log: 0-64 overburden; 64-80(?) Mascot dolomite; 80(?)-339 Kingsport formation (TR @ 264)---bottom 30 feet in massive chert. Mineralization: Shine hole---295-296 (1') ½% Zn (est); very little pyrite.

With the completion of Hole JA-16 on June 28, 1960 insufficient time was available to start and reasonably complete other holes prior to the closing date of the contract (6-30-60). Consequently, the 2,156 feet of the 50,000 feet of drilling allowed under the contract were unused; or conversely 95.7% of the drilling was completed. This drilling has adequately explored the three major targets in the contract area outlined by geochemical prospecting. Preliminary review of the drilling results shows that the exploration found: 1) a small ore body on the Green-Dalton tract; 2) traces of mineralization but probably of sufficient strength to give the geochemical anomaly on the Stapleton-Dave Jackson tracts; and 3) a large pyrite-bearing breccia body mostly on the Elvin Jackson tract---probably with sufficient zinc to cause a strong geochemical anomaly. The results suggest that the project may be certifiable but further study is warranted.

Inspected: July 8, 1960

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MINING ENGINEER
U. S. BUREAU OF MINES

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A PROGRESS REPORT ON THE PUNCHEON CAMP CREEK PROJECT

GRAINGER COUNTY, TENNESSEE

June, 1960

Docket No. 4580
Contract No. Idm-E-1088

During the month of June seven (7) holes were drilled on the Puncheon Camp Creek Project. A total of 2,905 feet of hole was drilled. Four of these holes were drilled on the Elvin Jackson farm, two on the S. S. Breeding farm and one on the J. C. McGinnis farm.

According to the terms of Amendment No. 5, the subject contract expired on June 30, 1960, and the drilling under this contract is terminated.

Hole JA-13 was drilled at a location 100 feet west of JA-4 on the strike fence in order to explore for the possibility of mineralization trending in this direction from JA-7. Hole JA-13 collared in the Kingsport formation and was drilled to a depth of 481 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 88	Overburden	-	-	-
88-386	Kingsport	"R" @ 279 "S" @ 347 "T" @ 386	Shine @ 186,258, 399	Dolomite and recrystalline; abundant pyrite
386-481	Longview	"U" @ 396	-	Dolomite & recrystalline

Hole BR-1 was drilled 400 feet east of CO-6 in an attempt to intersect an alternate possible trend of mineralization from the Elvin Jackson geochemical anomaly. This hole collared in the Kingsport formation and was drilled to a depth of 325 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 49	Overburden	-	-	-
49-294	Kingsport	"H" @ 184 "G" @ 247 "I" @ 294	-	Dolomite and recrystalline, some breccia
294-325	Longview	"J" @ 308	-	Dolomite

Hole BR-2 was drilled at a location approximately 200 feet east of BR-1 in a further attempt to intersect an alternate possible trend of mineralization. This hole collared in the Kingsport formation and was drilled to a depth of 400 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 69	Overburden	-	-	-
69-372	Kingsport	"H" @ 279? "G" @ 330? "I" @ 372	-	Dolomite and recrystalline;some breccia
372-400	Longview	"J" @ 383	-	Dolomite & recrystalline

Hole JA-14 was drilled 200 feet west of JA-9 in an attempt to intersect mineralization trending in this direction from hole JA-7. Hole JA-14 collared in the Mascot formation and was drilled to a depth of 560 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 55	Overburden	-	-	-
55-264	Mascot	Chert @ 264	-	Dolomite
264-526	Kingsport	"H" @ 436 "G" @ 493? "I" @ 526	-	Dolomite and recrystalline; breccia & very abundant pyrite
526-560	Longview	"J" @ 536	-	Dolomite, recrystalline and some limestone

Hole MC-6 was drilled 200 feet east of BR-2 to further explore the area between CO-6 and MC-3 east of the Elvin Jackson anomaly. MC-6 collared in the Kingsport formation and was drilled to a depth of 330 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 40	Overburden	-	-	-
40-323	Kingsport	"g" @ 229 "g" @ 2757 "g" @ 323	-	Dolomite, recrystalline and some limestone. Little breccia
323-330	Longview	"g" @ 333	-	Dolomite and recrystalline

Hole JR-15 was drilled at a location 100 feet downdip from JR-5 to explore for mineralization in that area east of JR-7. JR-15 collared in the Rascot formation and was drilled to a depth of 450 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 46	Overburden	-	-	-
46-151	Rascot	Chas @ 152	-	Dolomite
151-4367	Kingsport	"g" @ 330 "g" @ 394 "g" @ 4367	Shine @ 205, 290½ & 368	Dolomite & recrystalline. Some breccia
4367-450	Longview	-	-	Dolomite & recrystalline

Hole JR-16 was drilled at a location 200 feet east of JR-5 to explore for mineralization downdip from the geochemical anomaly. This hole collared in the Rascot formation and was drilled to a depth of 339 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 62	Overburden	-	-	-
62- 027	Rascot	Chas @ 027	-	Dolomite
02-339	Kingsport	"g" @ 270 "g" @ 315?	293-294, Est.	Dolomite,recrystalline and chert. Little breccia

INTERIM REPORT

DMEA-4580, Idm-E1088 (zinc)

Operator: B. H. Putnam, Thorn Hill, Tennessee, Assignee

Location: Puncheon Camp Creek area, Grainger County, Tenn.

Summary of drilling completed

	Since last inspection	To date
Number of holes.....	8 ✓	85 79
Footage	3,568 ✓	42,468 42462'
Footage reamed.....	98 ?	1,256 ?

Number of Holes showing:

a)	Commercial-grade zinc ore.....	12
b)	Non-commercial zinc mineralization...	45
c)	No zinc mineralization.....	28

Since the last interim report submitted (for inspection of project on March 9, 1960) the project was visited on April 19, 1960 in the company of L. G. Houk, Acting Field Officer, OME R gion IV and V. J. Lynch, U. S. Bureau of Mines. No report was submitted for that visist as the information available to the Examiner at that time was incomplete. Also in that period The New Jersey Zinc Company effected a management contract with B. H. Putnam for the completion of the DMEA contract and placed a Longyear drill in operation in the Puncheon Camp contract area on April 13, 1960. With the progress now being made it is anticipated that the drilling will be essentially complete by the end of the current contract expiration date on June 30, 1960.

Data on the eight drill holes completed since March 9 are summarized as follows:

Hole DJ-4: Located on Dave Jackson Tract 200 feet down dip from Hole DJ-3. Drilling started: 2/29/60; completed: approximately 3/10/60. Total depth: 450 feet. Summary log: 0-174 Mascot dolomite (thickness of overburden not recorded); 174-444 Kingsport formation (TR @ 355); 444-450 Longview dolomite. Mineralization: None--barren hole.

MAY 26 1960
O.M.E.

Hole JA-3: Located on Elvin Jackson tract approximately 300 feet up-dip from Hole JA-2. Drilling started: 3/26/60; completed 4/6/60. Collar elevation: 1,455 feet. Total depth: 600 feet. Summary log: 0-73 overburden; 73-252 Mascot dolomite; 252-600 Kingsport formation and Longview dolomite (T-bed not recognized--fault gouge; TR @ 413). Mineralization: Shine hole; shines of ZnS @ 194½, 427 with 1 ft (449-450) estimated @ 4½% Zn. Hole strongly mineralized with pyrite throughout.

Hole JA-4: Located on the Elvin Jackson tract 600 feet up-dip from Hole JA-2. Collar elevation 1526 ft. Drilling started: 4/7/60; completed: 4/13/60. Total depth 475 ft. Summary log: 0-98 overburden; 98-102 Mascot dolomite; 102-397 Kingsport formation (TR @ 297); 397-475 Longview dolomite. Mineralization: 1 ft (195-397) 3 % Zn; 1 ft. (205-206) 3½%; 1 ft. (211-212) 1%; 1 ft. (219-220) 3/4 %; 1 ft (231½-323½) 3-3/4%; 1½ ft (274-275½) 3%. All values given are in percent estimated Zn; also strong shines of ZnS @ 214, 226,290,295,297, and 315. Hole also contains considerable pyrite.

Hole JA-5: Located on Elvin Jackson tract 400 ft northeast (on strike) from Hole JA-4. Collar elevation: 1485 ft. Drilling started: 4/13/60; completed: 4/23/60. Total depth: 400 ft. Summary log: 0-44 overburden; 44-400 Mascot, Kingsport and Longview formations (separating markers not recognized; TR @ 278). Strong brecciation @ 238-258 amf 325-390. Mineralization: 12 ft (238-250) 1/4%; shines of ZnS @ 286,303,307, and 310,.

Hole JA-6: Located on Elvin Jackson tract 200 ft up-dip from Hole JA--4. Collar elevation: 1569 ft. Drilling started: 4/15/60; completed: 4/19/60. Total depth: 309 ft. Summary log: 0-90 overburden; 90-296 Kingsport formation (TR @ 163); 296-309 Longview dolomite. Mineralization: Shine (trace) hole; shine of galena @ 154 and shine of sphalerite @ 165. Of note is the galena-the first to be recognized in the DMEA exploration drilling on Copper Ridge; only other occurrence known in the Copper Ridge district is at the Flat Gap mine.

Hole JA-7: Located on the Elvin Jackson tract 100 feet down dip from Hole JA-4. Collar elevation: not known. Drilling started: 4/20/60; completed: 4/25/60. Total depth: 450 ft. Summary log: 0-50 overburden; 50-168 Mascot dolomite; 168-409 Kingsport formation (TR @ 320) 409-450 Longview dolomite. Mineralization: Ore hole; 16' (241-257) 6.2%; 8½' (276-284½) 2.02%; 8' (292-300) ½% est. 10 ft (309-319) 0.79%; 8'(327-335) 2% est. Also shines @ 158-and 260.

Hole JA-8: Located on Elvin Jackson tract 400 ft. northeast (on strike) from Hole JA-5. Collar elevation: not yet known. Drilling strated: 4/22/60; completed: 5/2/60(?) Total depth: 384 ft. Summary log: 0-70 overburden; 70-71 (?) Mascot dolomite; 71(?)-384 Kingsport dolomite (T-bed not reached) TR @ 259). Mineralization: Barren hole--considerable pyrite but no sphalerite.

Hole JS-9: Located on Elvin Jackson tract 100 ft down dip from Hole JA-7. Collar elevation: Not yet known. Drilling started: 4/26/60; completed: 5/6/60. Total depth: 500 ft. Summary log: 0-92 overburden; 92-201 Mascot dolomite; 201-500 Kingsport and Longview formations (T-bed not recognized; TR @ 380). Mineralization: Trace hole--ZnS shine @ 183 and 210; considerable breccia and pyrite.

Drilling in progress

Drilling is in progress at Holes AC-1 and AJ-1 (Acuff and Johnson tracts respectively). Hole AC-1 is located 400 feet down dip from Hole JA-5 and was at a depth of 596 ft with anticipated bottom being 625 ft. Hole AJ-1 is located 400 ft southwest (on strike) from Hole JA-4 and was drilling at a depth of 282 ft with anticipated total depth being about 350 feet. Hole AC-1 was the only hole of the two that showed any zinc--there being two strong shines located at depths of 464 and 483 feet. New sites presently considered are midway between Holes JA-4 and 5, and 400 feet down-dip from Hole AJ-1.

Inspected : May 12, 1960

Helmuth Wedow, Jr., Geologist

Signature Lawrence D. Hoult Title ACTING FIELD OFFICER, REGION IV OFFICE OF MINERALS EXPLORATION Date 6/24/60

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A PROGRESS REPORT ON THE PUNCHEON CAMP CREEK PROJECT

GRAINGER COUNTY, TENNESSEE

May 1960

Docket No. 4580
Contract No. Idm-E-1088

During the month of April six (6) holes were drilled on the Puncheon Camp Creek Project. A total of 2,971 feet of hole was drilled.

Four of these holes were drilled on the Elvin Jackson farm, one on the Pryor Acuff farm and one on the Austin Johnson farm.

Hole JA-9 was drilled at a location 100 feet south of hole JA-7 on the dip fence in order to gain better knowledge concerning the extent of the mineralization in this direction. This hole collared in the Mascot formation and was drilled to a depth of 500 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 92	Overburden	-	-	-
92-201	Mascot	CM @ 201	Shine @ 183	Dolomite
201-500	Kingsport & Longview	"R" @ 380 "S" @ 444 ±	Shine @ 210	Dolomite and recrystalline. Abundant pyrite from 237 to bottom in breccia; Fault gauge 462-500

Hole AC-1 was located 400 feet south of hole JA-5. This hole collared in the Mascot formation and was drilled to a depth of 626 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 53	Overburden	-	-	-
53-330	Mascot	CM @ 330	-	Dolomite
330-596	Kingsport	"R" @ 500 "S" @ 544 "T" @ 596	464-465,2% Est. 483-483½,2% "	Dolomite and recrystalline; some "rock-matrix" breccia. Chert from 566-596
596-626	Longview	-	-	Dolomite & recrystalline

Hole AJ-1 was drilled at a location 400 feet west of JA-4. The hole collared in the Kingsport formation and was drilled to a depth of 350 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 90	Overburden	-	-	-
90-243	Kingsport	"R" @ 243 "S" @ 292 "T" @ 347	-	Dolomite and Recrystalline; some breccia
347-350	Longview	-	-	Dolomite

Hole JA-10 was drilled 200 feet east of JA-4 on the strike fence in an attempt to intersect mineralization between hole JA-7 and the geochemical anomaly. This hole collared in the Kingsport formation and was drilled to a depth of 452 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-118	Overburden	-	-	-
118-399	Kingsport	"R" @ 306 "S" @ 355 "T" @ 399	-	Dolomite and recrystalline; little breccia;Abundant pyrite 306-393
399-452	Longview	"U" @ 410	-	Dolomite & recrystalline

Hole JA-11 was drilled 400 feet downdip from hole AJ-1 in an attempt to intersect mineralization trending from hole JA-7 and the geochemical anomaly. This hole collared in the Mascot formation and was drilled to a depth of 630 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 48	Overburden	-	-	-
48-309	Mascot	CM @ 309	Trace @ 89	Dolomite
309-567	Kingsport	"R" @ 463 "S" @ 528 "T" @ 547	-	Dolomite & recrystalline; "Crackle" breccia; Very strong pyrite 247-550
567-630	Longview	"U" @ 578	-	Dolomite & recrystalline

Hole JA-12 was drilled 100 feet east of JA-4 on the strike fence in a further attempt to intersect mineralization trending between hole JA-7 and the geochemical anomaly. This hole collared in the Kingsport formation and was drilled to a depth of 413 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-103	Overburden	-	-	-
103-373	Kingsport	"R" @ 259 "S" @ 333 "T" @ 373	Strong shines @ 188,189-91 195,199,204 & 205; 208-209, 3% Est. Shine @ 217,Trace 284	Dolomite & recrystalline; some breccia. Very strong pyrite 231-413
373-413	Longview	"U" @ 385	-	Dolomite & recrystalline

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Lawrence G. Hoch Title ACTING FIELD OFFICER, OFFICE OF MINERALS E. Date 5-23-60

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A PROGRESS REPORT ON THE PUNCHEON CAMP CREEK PROJECT

GRAINGER COUNTY, TENNESSEE

April 1960

Docket No. 4580
Contract No. Idm-E-1088

During the month of April six (6) holes were drilled on the Puncheon Camp Creek Project. On April 12th, an additional diamond drill was moved onto the property. We now have two contract machines on the project, one of E. J. Longyear Company in addition to Putnam Drilling Company's rig.

All of the holes were drilled on the Elvin Jackson farm.

Hole JA-3 was drilled 300 feet north of JA-2 on the dip fence. This hole collared in the Mascot dolomite and was drilled to a depth of 600 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 73	Overburden	-	-	-
73-252	Mascot	CM @ 252	-	Dolomite, scattered pyrite mineralization
252-600	Kingsport & Longview	"R" @ 413	Shine ZnS @ 427; 449-50, Est. 4%	Dolomite and recrystalline. Vertical fault from 450-577. 431-72, 41' @ 2% FeS_2

Hole JA-4 was drilled 300 feet updip from JA-3. This hole collared in the Mascot dolomite and was drilled to a depth of 475 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 98	Overburden	-	-	-
98-102	Mascot	CM @ 102	-	Dolomite
102-397	Kingsport	"R" @ 297 "S" @ 355 "T" @ 397	195-196, Est. 3%; 205-206, Est. 3%; 211-212, Est. 1%; 219-220, Est. 3/4%; Shines @ 226, 231½, 232½, 236; 274-275½, Est. 3%; Shines @ 290, 295, 297 & 315	Dolomite and recrystalline; some breccia
397-475	Longview	"U" @ 405	-	Dolomite and recrystalline some breccia

Hole JA-5 was located 400 feet east of JA-3. The hole collared in the Kingsport formation and was drilled to a depth of 400 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 44	Overburden	-	-	-
44-400	Kingsport	"R" @ 278 "S" @ 350±	238-250, Est. 1% Shines @ 286, 303, 307, 310	Dolomite and recrystalline; and "rock-matrix" breccia

Hole JA-6 was drilled on the dip fence at a location 200 feet north of JA-4. The hole collared in the Kingsport formation and was bottomed at 309 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 90	Overburden	-	-	-
90-296	Kingsport	"R" @ 193' "S" @ 241 ± "T" @ 296'	Shine @ 165'	Dolomite and recrystalline; Shine PbS @ 154; some breccia
296-309	Longview	-	-	Dolomite, some recrystalline

Hole JA-7 was located 100 feet south of JA-4 on the dip fence. The hole collared in the Mascot dolomite and was drilled to a depth of 450 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 50	Overburden	-	-	-
50-168½	Mascot	CM @ 168½'	-	-
168½-409	Kingsport	"R" @ 320' "S" @ 385 ±	Shine @ 158; 241-257, 16' @ 5% Zn, Est. Shine @ 260; 276-284½, 8½' @ 1½% Est; 292-300, 8' @ ½% Est; 309½-319, 9½' @ 1½% Est; 321-322, Est. 1%; 327-335, 8' @ 2½% Est.	Dolomite and recrystalline; some breccia
409-450	Longview	"U" @ 418'	-	Dolomite and recrystalline

Hole JA-8 was drilled 40C feet east of JA-5. This hole collared in the Kingsport formation and was drilled to a depth of 384 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0- 70	Overburden	-	-	-
70-384	Kingsport	"R" @ 259' "3" @ 313 ±	-	Vertical Fault 70-119; Dolomite, recrystalline and limestone

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

INTERIM REPORT

DMEA-4580, Idm-E1088(zinc)

Operator: B. H. Putnam, Thorn Hill, Tennessee--Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes	8	77
Footage	2,353	38,894
Footage reamed	0 X 70'	1,158 X

71 holes
1228' reamed
Talbert 3/18/60

Number of holes showing:

a)	Commercial-grade zinc ore	11
b)	Non-commercial zinc mineralization	40
c)	No zinc mineralization	26

Data on the eight holes completed since the last inspection on January 11, 1960 are summarized as follows:

Hole ST-15: Located on Stapleton tract 200 feet down dip from Hole ST-13. Coordinates: N-50,817; E-48,378. Collar elevation: 1389 feet A.T. Drilling started: 1-11-60; completed: 1-15-60. Total depth: 440 feet (no reaming). Summary log: 0-27 overburden; 27-141 Mascot dolomite; 141-399½ Kingsport formation (TR @ 335); 399½-440 Longview dolomite. Mineralization: Barren hole.

Hole ST-16: Located on Stapleton tract approximately 260 feet up dip from Hole ST-14 on offset dip fence. Coordinates: N-51,122; E-48,096. Collar elevation: 1443 feet A.T. Drilling started: 1-18-60; Completed: 1-19-60. Total depth: 190 feet (no reaming). Summary log: 0-14 overburden; 14-161 Kingsport formation (TR @ 67) 161-190 Longview dolomite. Mineralization: Shine hole--trace of ZnS @ 17; 1' est. @ ½% Zn @ 21½-22½; possible shine of zinc carbonate @ 32; 2' est. @ 1% Zn @ 43-45.

Hole ST-17: Located on Stapleton tract about 100 feet down dip from Hole ST-16. Coordinates: 51,047; E-48,155. Collar elevation: 1428 AT. Drilling started: 1-21-60; completed: 1-25-60. Total depth: 245 feet (no reaming*). Summary log: 0-55 overburden; 55-213 Kingsport formation (TR @ 116); 213-245 Longview dolomite. Mineralization: Barren.

Hole ST-18: Located on Stapleton tract about 200 feet northeast of Hole ST-13 on strike fence. Coordinates: 51,081; E-48,448.

* Wrong. 60' reamed.
Talbert 3/18/60

Collar elevation: 1475 feet A.T. Drilling started: 1-26-60; completed: 1-29-60. Total depth: 312 feet (no reaming). Summary log: 0-31 overburden; 31-226½ Kingsport formation (TR @ 187½); 226½-312 Longview dolomite. Mineralization: Shine hole - with estimated values of zinc as follows: 37-37½ (½'), 1%; 86-86½(½'), 2%; 87½-88½ (1'), 4%; 102-103 (1'), 1%; shine @ 107; 108-109½ (1½') 4%; 110-111 (1'), 3%; 111-113 (2') 2½%; 116½-118 (1½'), 1½%; shines @ 124½; 124-124½ (½), 2½%; shines @ 126 and 126½; 130½-133 (2½'), 1/4%; 135½-137½(2'), ½%; shine @ 142.

Hole ST-19: Located on Stapleton tract about midway between Holes ST-13 and-18. Coordinates: N-51,081; E-48,319. Collar elevation: 1463 feet A.T. Drilling started: 1-31-60; completed: 2-3-60. Total depth: 315 feet (no reaming). Summary log: 0-30 overburden; 30-293½ Kingsport formation (TR @ 196); 293½-315 Longview dolomite. Mineralization:"Shine" hole--shines @ 95-95½.

Hole DJ-1: Located on Dave Jackson property (northeast of Stapleton tract) 100 feet northeast of Hole ST-18 on strike fence. Coordinates: 51,253; E-48,409. Collar elevation: 1494 feet AT. Drilling started: 2-4-60; completed: 2-9-60. Total depth: 300 feet (no reaming)**. Summary log: 0-35 overburden; 35-245 Kingsport formation (TR @ 153); 245-300 Longview dolomite. Mineralization: Shine hole--with values of zinc as follows: trace @ 61; 65-67½(2½') 2.41%; 67½-68 (½'), 2.04%; shine @ 86; traces @ 89½, 90, and 93; shine @ 95½; 10,-102(1'), 0.22½%; trace @ 103½; 106½-108½(2'), 2.35%; 112½-113½(1'), 3.34%; 117½-118(½'), ½% (est); 125½-127(1½'), 4.08%; trace @ 128½; 129¼-129½ (¼'), 6% (est); trace @ 278½.

Hole DJ-2: Located on Dave Jackson tract about 100 feet northeast of Hole DJ-1 (on strike fence). Coordinates: N-51,345; E48,451. Collar elevation: 1499 feet A.T. Drilling started: 2-18-60; completed 2-22-60. Total depth: 220 feet (no reaming). Summary log: 0-93 overburden; 93-190 Kingsport formation (TR @ 103); 190-220 Longview dolomite. Mineralization:Barren hole.

Hole DJ-3: Located on Dave Jackson tract about 240 feet S75° E of Hole DJ-2 (first hole in dip fence 500 feet northeast of fence with Holes WS-1, ST-1, ST-15, and ST-13). Coordinates: N-51,268; E-48,689. Collar elevation: 1487 feet A.T. Drilling started: 2-23-60; completed: 2-26-60. Total depth: 331 feet (no reaming). Summary log: 0-85 overburden; 85-313 Kingsport formation (TR @ 216½); 313-331 Longview dolomite. Mineralization: Shine hole--with estimated values of zinc as follows: 151½-153 (1½'), 2%; shines @ 154½; trace @ 155.

** Wrong. 10' reamed.
Talbot

Drilling in progress

Drilling is in progress on Hole DJ-4 located approximately 200 feet southeast of Hole DJ-3 (down dip on dip fence). Core was seen to a depth of 190 feet. The hole was started on February 29, 1960 but encountered considerable difficulty due to a large cavity from about 70 to 105 feet in depth. At least three starts had been made on this hole and the third major effort consists of reaming to at least 110 feet to go below the cavity. On completion of Hole DJ-4 it is anticipated that at least two holes will be drilled in a strike fence southwest of Hole DJ-4.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

Date February, 1960 Operator D. H. Putman

Per Frederick L. Fisher Title Superintendent

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

REMARKS:

(Instructions on reverse)

(For Government use only)

W. J. Lynch
MINING ENGINEER
U. S. BUREAU OF MINES

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp Creek
Project, Grainger County, Tennessee

February 1960
by: F. T. Fischer

Docket No. 4580
Contract No. Idm-E-1088

During the month of February four (4) holes were drilled on the Puncheon Camp Creek Project; Hole ST-19 was drilled 100 feet southwest of ST-18 on the strike fence. This hole collared in the Kingsport formation and was drilled to a depth of 315 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-30	Overburden	———	———	———
30-293½	Kingsport	"R" @ 196'	Shines from 95-95½	Opening from 40-79'; Dolomite
		"S" @ 254½'	———	Dolomite and recrystalline; some breccia and "dry breccia"
		"T" @ 293½'	———	Recrystalline and some dolomite; some breccia and "dry breccia"
293½-315	Longview	"U" @ 306½	———	Dolomite

Hole DJ-1 was drilled 100 feet northeast of ST-18 on the strike fence. The hole collared in the Kingsport formation and bottomed at a depth of 300 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-35	Overburden	———	———	———
35-245	Kingsport	"R" @ 153'	ZnS trace @ 61'; ZnS shines 65-67½, 2.41%; 67½-68, 2.04%; ZnS shine @ 86'; Traces of ZnS @ 89½ and 90'; Trace ZnS @ 93'; ZnS shines @ 95½'; ZnS shines 101 - 102, 0.22%; Trace ZnS @ 103½; ZnS 106½-108½, 2.35%; 112½-113½, 3.34%; 117½-118, est ½%; 125½-127, 4.08%; Trace ZnS @ 128½; ZnS 129½-129½, est. 6%,	Dolomite, partly brecciated
		"S" @ 215'	———	Recrystalline and some dolomite; some breccia

		"I" @ 245	———	Recrystalline, limestone and little dolomite
245-300	Longview	"U" @ 258'	———	Dolomite
		"L-3" @ 269'	Trace ZnS @ 278 3/4'	Recrystalline and dolomite Fault zone @ 276-76½

Hole DJ-2 was drilled 100 northeast of DJ-1 on the strike fense. The hole collared in the Kingsport formation and bottomed at a depth of 220 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-93	Overburden	———	———	———
93-190	Kingsport	"R" @ 103'	———	Dolomite
		"S" @ 159'	———	Dolomite and recrystalline; partly brecciated
		"T" @ 190'	———	Recrystalline, dolomite and limestone
190-220	Longview	"U" @ 200'	———	Dolomite
		"L-3" @ 217'	———	Recrystalline

Hole DJ-3 was drilled N 87° E, 275 feet from DJ-1 on the next dip fence to the northeast. The hole collared in the Kingsport formation and was drilled to a depth of 331 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-85	Overburden	———	———	———
85-313	Kingsport	"R" @ 216½'	ZnS shines 151½-153, est. 2%; shine @ 154½; Trace @ 155	Dolomite
		"S" @ 274'	———	Dolomite and recrystalline
		"T" @ 313'	———	Limestone, recrystalline & Dolomite
313-331	Longview	"U" @ 329'	———	Dolomite

INTERIM REPORT

DMEA-4580, Idm-E1088 (zinc)

Operator: B. H. Putnam, Box 65, Thorn Hill, Tenn. Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes.....	2	69
Footage.....	679	36,541
Footage reamed.....	0	1,158

63 Talbert 2/10

Number of holes showing:

a) Commercial-grade zinc mineralization	11
b) Non-commercial zinc mineralization.....	35
c) No zinc mineralization.....	23

Diamond drilling on the Puncheon Camp project, recessed on November 21, 1959 for repairs to the drill rig, was resumed on December 23, 1959. The drilling was still on the Stapleton tract but was on the northeast side of the gorge where Puncheon Camp Creek cuts through Copper Ridge at a point near the project boundary. The purpose of drilling in this area is to test a large geochemical anomaly and significant surface showings of sphalerite. Data on the two holes completed since the resumption of drilling are summarized as follows:

Hole ST-13: Located on the Stapleton tract at coordinates: N-50,992; E-48-273 (approximately 600 feet northwest of Hole St1 on same dip fence). Collar elevation: 1,445 feet A.T. Drilling started: 12/23/59; completed: 12/31/59. Total depth: 336 feet. Summary log: 0-36 overburden: 36-40? Mascot dolomite; 40?-322½ Kingsport formation (TR @ 212½?) 322½-336 Longview dolomite. Mineralization: Trace hole. Traces of Sphalerite @ 270½ and 288.

Hole ST-14: Located on Stapleton tract at coordinates: N-50,902; E-48,227 (approximately 100 feet south of Hole ST-13 on strike fance). Collar elevation: 1415 feet A.T. Drilling started; 1/1/60; oompleted: 1/8/60. Total depth: 343 feet; Summary log: 0-25 overburden; 25-51½ Mascot dolomite: 51½-336½ Kingsport formation (TR @ 215½); 336½-343 Longview dolomite. Mineralization: Barren

Drilling in progress

Hole ST-15 was in progress at the time of inspection. It is located approximately 200 feet down dip from Hole ST-13. Core was observed to a depth of 235 feet where the hole was drilling in the upper part of the Kingsport formation.

Inspected: January 11, 1960 Helmuth Wedow, Geologist, USGS

February 9, 1960

Memorandum

To: E. D. Talbert, Office of Minerals Exploration, Interior Building, Washington 25, D. C.

From: Administrative Assistant, Norris, Tennessee

Subject: Monthly report and voucher

We are enclosing two copies of the following monthly report and voucher:

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Laurence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date FEB 8 1960

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp Creek Project, Grainger County, Tennessee

January, 1960
by: F. T. Fischer

Docket No. 4580
Contract No. Idm-E-1088

During the month of January five (5) holes were drilled on the Puncheon Camp Creek Project. Hole ST-14 was drilled 100 feet southwest of ST-13 on the strike fence. The hole collared in the Mascot formation and was drilled to a depth of 343 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-25	Overburden	___	___	___
25-51½	Mascot	CM @ 51½	___	Dolomite
51½-336½	Kingsport	"R" @ 215½	___	Dolomite & recrystalline; some breccia
		"S" @ 282	___	Recrystalline with little dolomite. Dry Breccia
		"T" @ 336½	___	Heavy Pyrite
336½-343	Longview	___	___	Dolomite

Hole ST-15 was drilled 200 feet south of ST-13 on the dip fence. The hole collared in the Mascot formation and was drilled to a depth of 440 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-27	Overburden	___	___	___
27-141	Mascot	CM @ 141'	___	Dolomite
141-399	Kingsport	___	___	Dolomite, heavy pyrite upper part
		"R" @ 305'	___	Dolomite & recrystalline
		"S" @ 367½'	___	Recrystalline, little dolomite some breccia & heavy pyrite
		"T" @ 399	___	
399-440	Longview	"U" @ 411	___	Dolomite & recrystalline some breccia lower part

Hole ST-16 was drilled 260 feet north of ST-14 on the offset dip fence. The hole collared in the Kingsport formation and was drilled to a depth of 190 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-14	Overburden	———	———	———
14-161	Kingsport	"R" @ 67	Traces of ZnS @ 17'; ZnS shines 21½-22½, est ½% Zinc carbonate (?) @ 32'; ZnS shines 43-45, est 1%	Dolomite, partly brecciated
		"S" @ 120	———	Recrystalline & dolomite with very thin limestone
		"T" @ 161	———	Limestone and recrystalline
161-190	Longview	"U" @ 175	———	Dolomite & some recrystalline
		"L-3" @ 186	———	

Hole ST-17 was drilled 100 feet south of ST-16 on the offset dip fence. The hole collared in the Kingsport formation and was drilled to a depth of 245 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-55	Overburden	———	———	———
55-213	Kingsport	"R" @ 116	———	Dolomite & recrystalline
		"S" @ 178	———	Recrystalline & little dolomite
		"T" @ 213	———	
213-245	Longview	"U" @ 233	———	Dolomite; faulting in "T" bed

Hole ST-18 was drilled 200 feet northeast of ST-13 on the dip fence. The hole collared in the Kingsport formation and was drilled to a depth of 312 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-31	Overburden	———	———	———

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
31-266½	Kingsport		ZnS shines 37-37½, est 1%; 86-86½, est 2%; 87½-88½ est 4%; 102-103, est 1%; shine @ 107; 108-109½; est 4%; 110-111, est 3%; 111-113 est 2½%; 116½-118, est 1½%; shines 124½-124½; 125-125½, est 5%; shine @ 126 & 126½; 130½-133, est ½%; 135½-137½, est ½; shine @ 142	Dolomite, strongly brecciated
		"R" @ 187½	_____	Dolomite & recrystalline
		"S" @ 234	_____	Recrystalline & little dolomite
		"T" @ 226½	_____	
266½-312	Longview	"U" @ 296	_____	Dolomite; brecciated in lower part with heavy pyrite

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E-1088 in accordance with the terms of the contract.

Signature [illegible] Title MINING ENGINEER U. S. BUREAU OF MINES Date JAN 14 1960

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date JAN 14 1960

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

JAN 18 1960
O.M.E.

W. J. Lynch
MINING ENGINEER
U. S. BUREAU OF MINES

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Luncheon Camp Creek
Project, Grainger County, Tennessee

December 1959
by: F. F. Fischer

Docket No. 4580
Contract No. Idm - S - 1088

During the month of December one (1) hole was drilled on the Luncheon Camp Creek Project. Hole ST-13 was drilled 60[illegible] feet north of hole ST-1 on the dip fence. This hole collared in the Mascot formation and was drilled to a depth of 336 feet.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E-1088 in accordance with the terms of the contract.

Signature [illegible] Title MINING ENGINEER U. S. BUREAU OF MINES Date DEC 3 1959

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date DEC 3 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

OFFICE OF MINERALS EXPLORATION
INTERIM REPORT

DMEA-4580, Idm-E1088-zinc

Operator: B. H. Putnam, Box 65, Thorn Hill, Tennessee-Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	Todate
Number of holes.....	2	67
Footage.....	770	35,862
Footage reamed.....	15	1,158

Number of holes showing:

a)	Commercial-grade zinc ore.....	11
b)	Non-commercial zinc mineralization..	34
c)	No zinc mineralization.....	22

Data on the two holes completed since the last inspection on November 13, 1959 are summarized as follows:

Hole ST-11: Location on the Stapleton tract at coordinates: N-50,173; E-46,847 (approximately mid-way between Holes GD--13 and ST-6). Collar elevation: 1,439 feet A.T. Drilling started: 11/2/59; completed: 11/14/59. Total depth: 385 (no reaming). Summary log: 0-80 overburden; 80-354 Kingsport formation (top of Kingsport estimated @ 77; TR @ 244); 354-385(bottom of hole) Longview dolomite. Mineralization: 1/2' (185-185½) @ 2%; 1/2' (210½-211) @ ½%; 1/2' (214½-215) @ 1/4%; 1/2' (215-216) @ ½%; 2' (221½-223½) @ 1 1/4%; 1' (341-342) @ 1½% ; also shines @ 205, 208,218, and 286½. Shine hole.

Note: All percentages given are estimated values of Zn.

Hole ST-12: Located on Stapleton tract at coordinates: N-50,090; E-46,794 (approximately midway between Holes GD-13 and ST-11). Collar elevation: 1,427 ft. A.T. Drilling started: 11/16/59; completed: 11/21/59. Total depth: 385 feet (15 ft. of reaming from 125-140). Summary log: 0-90 overburden; 90-369 Kingsport formation (top of Kingsport estimated @ 83; TR @ 245); 369-385 (bottom of hole) Longview dolomite. Mineralization: Shines of ZnS @ 307½,309½, and 319½.

Drilling in progress

At the time of inspection no drilling was in progress as the drilling equipment was again down for repairs to the hydraulic system. It is estimated that drilling will again be resumed within 1 to 2 weeks. Meanwhile, data are being reviewed to selec t the next hole site.

Inspected: November 24, 1959

OFFICE OF MINERALS EXPLORATION

INTERIM REPORT

DMEA-4580, Idm-E1088-zinc

Operator: B. H. Putnam, P.O. Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

No drill holes have been completed since the last inspection of this project. Hole ST-11, started November 2, had reached a depth of 341 feet on November 5 when equipment breakdown forced a recess of the drilling. It is anticipated that drilling will be resumed on November 14 or 16. This hole will probably be a shine hole as strong but not ore-grade mineralization has been encountered in the lower part of the upper member of the Kingsport just above the R-bed. On the completion of Hole ST-11 the drill will be moved to a site midway between Holes ST-11 and GD-13. The new hole will be ST-12.

Inspected: November 13,1959

Helmuth Wedow, Jr., Geologist
U. S. Geological Survey

INTERIM REPORT

DMEA-4580, Idm-E1088-Zinc

Operator: B. H. Putnam, Thorn Hill, Tennessee-Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes.....	3	65
Footage.....	1,256	35,092
Footage reamed.....	72	1,143

59 Total

Number of holes showing:

a) Commercial-grade zinc mineralization.... 11
b) Non-commercial zinc mineralization..... 32
c) No zinc mineralization..... 22

The data on the three holes completed since the last previous inspection are summarized as follows:

Hole ST-8 : Located on Stapleton tract at coordinates: N-50,274; E-47,350 (375 feet up rake on strike fence from point about midway between Holes St-4 and -5). Collar elevation: 1,407 feet A.T. Drilling started: 10-7-59; completed : ;0-17-59. Total depth: 433 feet (reamed to 72 ft.) Summary log: 0-31 overburden; 31-164 Mascot dolomite; 164-426 Kingsport formation (TR @ 315); 426-433 (bottom of hole) Longview dolomite. Mineralization: Trace hole; shines of sphalerite @ 180 and 388-388½, and a trace at 401½.

Hole ST-9: Located on Stapleton tract at coordinates: N-50,366; E47,402. Collar elevation: 1,391 feet A.T. Drilling started: 10-19-59; Completed: 10-23-59. Total depth: 392 feet (no reaming). Summary log: 0-24 overburden; 24-114½ Mascot dolomite; 114½-375 Kingsport formation (TR @ 268); 375-392 Longview dolomite.

Mineralization:: Shine hole with mineralized runs as follows: 1' (236½-237½), 1.16% Zn; ½' (294-295), est. ½% Zn; 2' (327½-329½), 1.56% Zn; ½' (332½-333), 0.68% Zn; also traces of ZnS @ 292, 299½, 303, 304½, 305½, 334½, and 339.

Hole ST-10: Located on Stapleton tract at coordinates: N-50,164; E-47,048. Collar elevation: 1,429 feet A.T. Drilling started: 10-26-59; completed 10-31-59. Total depth: 431 feet (no reaming).

Summary log: 0-50 overburden; 50-142 Mascot dolomite; 142-423 Kingsport formation (TR at 312½); 423-431 (bottom of hole) Longview dolomite. Mineralization: Non--barren hole.

Drilling in progress

Hole ST-11, currently drilling on the Stapleton tract, is located approximately midway between Holes GD-13 and St-6 on a strike fence running between holes GD-2 and ST-6. The objective of this hole is to test for a mineralized shoot raking at a high angle into the dip from a surface zinc soil anomaly and roughly parallel to the Green-Dalton shoot already discovered. At the time of inspection the hole was still setting casing in overburden.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E-1088 in accordance with the terms of the contract.

Signature [illegible] Title MINING ENGINEER U. S. BUREAU OF MINES Date NOV 12 1959

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert H. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date NOV 12 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Puncheon Camp Creek Project, Grainger County, Tennessee

October, 1959
by: F. T. Fischer

Docket No. 4580
Contract No. Idm-E-1088

During the month of October three (3) holes were drilled on the Puncheon Camp Creek Project. Hole ST-8 was drilled 750 feet east of GD-25 on a strike fence. The hole collared in the Mascot formation and was drilled to a depth of 433 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-31	Overburden	—	—	—
31-164	Mascot	CM @ 164	—	Dolomite
164-426	Kingsport	"R" @ 315 "S" @ 385½ "T" @ 426	Trace ZnS @ 180 ZnS shines 387-387½ Trace ZnS @ 401½	Dolomite, limestone & recrystalline; some breccia
426-433	Longview	—	—	Dolomite

Hole No. ST-9 was drilled 100 feet east of ST-8 on the strike fence. This hole collered in the Mascot formation and was drilled to a depth of 392 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-24	Overburden	—	—	—
24-114½	Mascot	CM @ 114½	—	Dolomite

INTERIM REPORT

DMEA-4580, Idm-E1088 (Zinc)

Operator: B. H. Putnam, Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes	1	62X
Footage	904	33,836*

Number of holes showing:

a) Commercial-grade zinc ore 11
b) non-commercial zinc mineralization 30
c) No zinc mineralization 21

* Footage corrected from last interim report to eliminate 1,309 feet previously carried for Holes GD-7, -7a, -8, -9, -10, and -11 which were drilled by the Operator at his own expense. Also to correct a 3-foot error in reporting the depth of Hole BUL-1 in the interim report of 3/9/59 (i. e., BUL-1 reported as 613 feet corrected to 610 feet).

Data on the one hole completed since the last inspection on September 16, 1959 is summarized as follows:

Hole GD-35: Located on the Green-Dalton tract at coordinates N-49,402; E-47,318. Collar elevation: 1,311 feet A. T. Drilling started: 9/17/59; completed: 10/5/59. Total depth: 904 feet. Summary log: 0-12 overburden; 12-625 Mascot dolomite; 625-887 Kingsport formation (TR @ 779); 887-904 (bottom of hole) Longview dolomite. Mineralization: Trace hole. Traces of sphalerite @ 853½ and 866, both in "S" bed.

Drilling in progress

Drilling is now in progress on Hole ST-8 (Stapleton property), located on strike fence 350 feet northeast of point midway between Holes ST-4 and -5 on dip fence. Objective of exploration at this site is to test for mineralized shoot paralleling that on the Green-Dalton property. At the time of inspection the hole had reached a depth of 72 feet.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

INTERIM REPORT

DMEA-4580, Idm-E1088 - (Zinc)

Operator: B. H. Putnam, Operator, Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes.....	2	* ~~61~~ 55
Footage.....	1,886	~~36,286~~ 32,932'

Number of holes showing:

a) Commercial-grade zinc ore..... 11
b) Non-commercial zinc mineralization..... 29
c) No zinc mineralization..... 21

Date on the two holes completed since the last inspection are summarized as follows:

Hole GD-33: Located on the Green-Dalton tract at coordinates: N-49,132; E-46,442. Collar elevation 1413 feet A.T. Drilling started August 10, 1959; completed August 26, 1959. Total depth 864 feet. Summary log: 0-16 overburden; 16-561½ Mascot dolomite; 561½-831 Kingsport formation (TR @ 730) 831-864(bottom of hole) Longview dolomite. Mineralization: Barren hole.

Hole GD-34: Located on Green-Dalton tract at coordinates: N-48879; E-46586 (approxi. 300 ft. south of GD-33). Collar elevation: 1331 feet A.T. Drilling began 8/27/59; completed 9/15/59. Total depth 1022 feet. Summary log: 0-11 overburden; 11-717 Mascot dolomite; 717-987 Kingsport formation TR @ 880); 987-1022(bottom of hole) Longview dolomite. Mineralization: Barren hole.

Drilling in progress

Drilling is now in progress on Hole GD-35 at a site approximately 200 feet east of Hole GD-29 on a strike fence. At the time of inspection it was still in overburden.

Inspected: September 16, 1959

Helmuth Wedow, Jr., Geologist
Geological Survey (OME)

* Erroneously includes holes GD-7, 7A, 8, 9, 10, + 11 not accepted by the Bd.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Laurence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date SEP 21 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Puncheon Camp
Creek Project, Grainger County, Tennessee

August 1959
by W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of August two holes were drilled on the Puncheon Camp Creek Project. Hole GD-33 was drilled 400 feet south of GD-17 on a dip fence. The hole collared in the Mascot formation and was drilled to a depth of 864 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-16	Overburden	---	---	---
16-561½	Mascot	CM @ 561½	---	Dolomite
561½-831	Kingsport	"R" @ 730 "S" @ 787 "T" @ 831	---	Dolomite & recrystalline; some "dry" breccia
831-864	Longview	"U" @ 843	---	Dolomite & recrystalline

Hole GD-34 was drilled on the dip fence 300 feet south of GD-33. The hole collared in the Mascot formation and was drilled to a depth of 1022 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-11	Overburden	----	---	--
11-717	Mascot	CM @ 717	---	Dolomite

B. H. Putnam DD-GD-34

Copper Ridge Project - Puncheon Camp Creek

DMEA Idm-E 1088

Hole No.: GD-34 Collared: 8/28/59

Farm: Green-Dalton Bottomed: 9/15/59

Location: N 48,879.20 Depth: 1022'

E 46,585.64 Casing: BX-10'; AX-20'

Elevation: 1331.38 Grnd Reaming: None

Drilled by: Putnam Drilling Co. Cement: None

Logged by: W. T. Hill & F. Fischer

Top Kingsport	717
Top "R" bed	880

INTERIM REPORT

DMEA-4580, Idm-E1088-Zinc

Operator: B. H. Putnam, Operator, Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek Area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes	1	59 53
Footage	1,125	34,400 31,046

Number of holes showing:

(a)	Commercial-grade zinc mineralization	11
(b)	Non-commercial zinc mineralization	29
(c)	No zinc mineralization	19

Data on the one hole completed since the last inspection are summarized below:

Hole GD-32: Located on the Green-Dalton property approximately southwest from Hole GD-31. Coordinates: 48,960-N; 47,062-E. Collar elevation: 1,242 feet A.T. Drilling started: 7/2/59; completed: 8/7/59. Total depth: 1125 feet. Summary log: 0-10 overburden; 10-27 Chickamauga limestone; 27-763 Mascot dolomite; 763-1039 Kingsport formation (TR @ 935); 1030-1125(bottom of hole) Longview dolomite. Mineralization: Shine hole. 1011-1023½ (12½') estimated at 1.25% Zn; 1034½-1037 (2½') estimated at 2.5% Zn.

Drilling in progress

Drilling is now in progress on Hole GD-33, located approximately 400 feet south of Hole GD-16 on a dip fence extension. It was collared in the Mascot dolomite and at the time of inspection was drilling in Mascot at a depth of 195 feet.

Inspected: Aug. 13, 1959

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date AUG 20 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp
Creek Project, Grainger County, Tennessee

July 1959
by W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of July one hole was drilled on the Puncheon Camp Creek Project. Hole GD-32 was drilled on a strike fence 100 feet southwest of GD-31. The hole collared in the Mascot formation and was drilled to a depth of 1125 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-10	Overburden	----	----	--
10-763	Mascot	CM @ 763	----	Dolomite
763-1039	Kingsport	"R" @ 935 "S" @ 994 "T" @ 1039	1011-1023½, Est. 1½% ZN; 1034½-1037, Est. 2½% ZN	Dolomite & re-xl; some brecciation
1039-1125	Longview	"U" @ 1051 "V" @ 1070	----	Dolomite, re-xl, limestone; 1104-1113, Est. 2½% FeS

Drilling is now underway at site GD-33, located on a dip fence 400 feet south of GD-16.

Signature Robert A. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date JUL 27 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp
Creek Project, Grainger County, Tennessee

June 1959
by W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of June one hole was drilled on the Puncheon Camp Creek Project. Hole GD-31 was drilled on a strike fence 100 feet southwest of GD-30. The hole collared in the Mascot formation and was drilled to a depth of 1067 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-10	Overburden	——	——	—
10-730	Mascot	CM @ 730	——	Dolomite
730-1006	Kingsport	"R" @ 893 "S" @ 958 "T" @ 1006	956½-969½, 13'-1.51% 985½-1005½, 20'-0.9%	Dolomite & re-xl in part brecciated
1006-1067	Longview	"U" @ 1019 "V" @ 1033	1024-1031, 7'-3.08% 1049-1050, 1'-1.68%	Dolomite & re-xl, in part brecciated

Drilling is now underway @ GD-32 100 feet southwest of GD-31.

OFFICE OF MINERALS EXPLORATION

INTERIM REPORT

DMEA 4580, Idm-E1088-Zinc

Operator: B. H. Putnam, Operator Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of Holes...	2	58
Footage	2,067	33,275 29,921

Number of holes showing:

a) Commercial-grade zinc ore..... 11
b) Non-commercial zinc mineralization.... 28
c) No zinc mineralization..... 19

Summaries of the results of the two holes completed since the last inspection are given below:

Hole GD-30: Located on the Green-Dalton tract at coordinates: N-49,126; E-47,169. Collar (platform) elevation: 1250 feet A.T. Drilling started: May 37, 1959 and was completed June 12, 1959. Total depth 1,000 feet. Summary log: 0-15 overburden; 15-676 (CM-ss) Mascot dolomite; 676-848 (TR) upper Kingsport; 848-945 (TT) lower Kingsport; 945-1000 (bottom of hole) Longview dolomite. Mineralization: Ore hole with runs as follows: 852-860 (8') estimated @ ½% Zn; 903 trace ZnS; 919-938 (19') with 5.9% Zn; 968½-970½ (2') estimated @ 2½% Zn.

Hole GD-31: Located on the Green-Dalton tract approximately 100 feet southwest of Hole GD-30 (coordinates and elevation not yet available). Drilling started: June 12, 1959; completed July 2, 1959. Total depth 1,067 feet.

29921

Summary log: 0-10 overburden; 10-730 (CM-ss) Mascot dolomite; 730-900 (TR) upper Kingsport; 900-1006 (TT) lower Kingsport; 1006-1067 (Bottom of hole) longview dolomite. Ore hole with runs of mineralization as follows: 937-937½ (1/2') at 1% Zn; 955 traces ZnS; 956½-959½ (3') at 4%; 966-969½ (3½') at 2% Zn; 975 trace ZnS; 985½-991 (5½') at 1%; 991-1005½(14½) at 2 1/4%; 1024-1031 (7') at 4%; 1038-1041, shines; 1049-1050 (1') @ 1%. All values are estimated percent zinc--assays not yet available.

Drilling in progress

Hole GD-32 is now in progress and drilling in the upper part of the Mascot dolomite after having collared in the basal few feet of the Chickamauga limestone. It is located approximately 100 feet southwest of Hole GD-31.

Inspected: July 9, 1959

Signature Robert A. Lawrence Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date JUN 24 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Dunaheen Camp Creek Project
Grainger County, Tennessee

May 1959
by W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of May two holes were drilled on the Dunaheen Camp Creek Project. Hole GD-29 was drilled 400 feet southeast of GD-27. The hole collared in the Mascot formation and was drilled to a depth of 915'.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-10	Overburden	—	—	—
10-622	Mascot	CMS @ 622	Tr ZnS @ 210'	Dolomite
622-842	Kingsport	"A" @ 761 "S" @ 820 "T" @ 842	793-800, est. 5% ZS (hvy core loss in this zone) sh @ 814	Dolomite, re-xl, and limestone, faulted, hvy core losses
842-915	Longview	"U" @ 854	—	Dolomite, re-xl, and ls

Hole GD-30 was drilled on a strike fence 100 feet southwest of GD-29. The hole collared in the Mascot formation and was drilled to a depth of 1000 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-15	Overburden	—	—	—
15-676	Mascot	OPSS @ 676	—	Dolomite
676-945	Kingsport	"R" @ 848 "S" @ 897½ "T" @ 945	852-860, est. 1/2% ZN; Tr @ 903; 919½-934, est. 5½% ZN; 934-937, est. 2½% ZN	Dolomite, re-xl, in part brecci-ated
945-1000	Ringview	"U" @ 955½ L-3 @ 970½	968½-970½, est. 3% ZN	Dolomite, ½ re-xl; FeS shines 991-993

Drilling is now underway at site CD-31, 100 feet southwest of CD-30.

INTERIM REPORT

DMEA-4580, Idm-E1088 (Zinc)

Operator: B. H. Putnam, Operator, Box 65, Thorn Hill, Tennessee--Assignee

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of drilling completed

	Since last inspection	To date
Number of holes	2 ✓	56 X 51
Footage	1,696 ✓	31,208 X 27,854

Tabbert 6/18/59

Number of holes showing:

a) Commercial-grade zinc ore . . . . . 9 ✓
b) Non-commercial zinc mineralization 28
c) No zinc mineralization 19

Summaries of the data on the two holes completed since the last inspection are given below:

Hole GD-28: Located on the Green-Dalton property about 290 feet west-southwest of Hole GD-27. Coordinates: N-49,345; E-46,626. Collar (platform) elevation: 1,398. Drilling was started on 4/24/59 and was completed on 5/7/59 at a depth of 781 feet. Summary log: 0-50 clay overburden; 50-486 Mascot dolomite; 486-762 Kingsport formation (TR @ 645) 762-781 (bottom of hole) Longview dolomite. Note: Essentially all of lower part of Kingsport formation was a "dry" (or sedimentary) breccia with a reddish argillaceous matrix). Mineralization: Barren hole.

Hole GD-29: Located on the Green-Dalton property approximately 400 feet southeast of the fence consisting of Holes GD-25, -26, and -27. Coordinates: N-49,216; E-47,219. Collar (Platform) elevation: 1,243 feet. Drilling was started on 5/11/59 and was completed on 5/25/59 at a depth of 915 feet. Summary log: 0-10 clay overburden; 10-622 Mascot dolomite; 622-842(?) Kingsport formation (TR @ 761(?); 842(?)-915 (bottom of hole) Longview dolomite. Mineralization: Shine hole. 793-800, 7' with 10 % Zn (est); shine of Zns @ 814. Note: Only 1½' of core recovered from the 7 feet cored---the ground appeared highly shattered. As sphalerite is usually the first material to break it is likely that 5½' core loss could have had a grade equal to that recovered and thus the hole may be in ore.

Drilling in progress

Drilling is now in progress on Hole GD-30, located approximately 100 feet south-southwest of Hole GD-29 on a strike fence. At the time of inspection the hole was drilling in the Mascot dolomite at a depth of 585 feet. Estimated bottoming depth is 925 feet.

Inspected: June 4, 1959

Summary of drilling completed

	Since last inspection	To date
Number of holes	3 ✓	54 ✗ 48
Footage	2,233 ✓	29,512 ✗ 26,158'

6 discontinued holes aggregated 3,351', leaving 3' difference Jackson

Number of holes showing:

a) Commercial-grade zinc ore	9 ✓
b) Non-commercial zinc mineralization	27
c) No mineralization	18

Summaries of the three holes completed since the last inspection on March 9, 1959 are given below:

Hole GD-25: Located on the Green-Dalton property approximately 200 feet east of Hole GD-11. Coordinates: N-49,622; E-46,982. Elevation: 1,391 feet. Drilling started on 3/6/59 and was completed on 3/17/59 at a depth of 703 feet. Summary log: 0-25 clay overburden; 25-420 Mascot dolomite; 420-703 Kingsport formation (Top of R-bed @ 574, top of S-bed @ 640). Top of T-bed (Longview dolomite) not reached. Mineralization: Weak trace of sphalerite at 393 in Mascot dolomite; hole considered barren.

Hole GD-26: Located on Green-Dalton property approximately 100 feet southwest of Hole GD-25. Coordinates: N-49,539; E-46,949. Elevation: 1,380 feet. Started drilling on 3/25/59 and completed on 4/9/59 at a depth of 760 feet. Summary log: 0-17 clay overburden; 17-442 Mascot dolomite; 442-708 Kingsport formation (Top of R-bed @ 596, top of S-bed @ 652); 708-760 bottom of hole) Longview dolomite. Mineralization: Shine of ZnS @ 660; 665-674, 9 feet with 5.06 % Zn; 665-688, 23 feet with 2.43 % Zn; 688-692, 4 feet with 1.04 % Zn; Shine of ZnS @ 700. Ore hole.

Hole GD-27: Located on Green-Dalton property approximately 100 feet southwest of Hole GD-26. Coordinates: N-49,448; E-46,880. Elevation: 1,377 feet. Drilling started on 4/10/59 and was completed on 4/22/59 at a depth of 770 feet. Summary log: 0-11 Clay overburden; 11-479 Mascot dolomite; 479-741 Kingsport formation (TR @ 636, TS @ 690); 741-770 (bottom of hole) Longview dolomite. Mineralization: Shine of ZnS @ 705; 706-707½, 1½ feet with 3.20 % Zn. Shine hole.

Drilling in progress

At the time of inspection drilling was in progress on Hole GD-28 on the Green-Dalton property. This hole is located about 290 feet west-southwest of Hole GD-27. Drilling was started on April 24, 1959 with the hole collared in the Mascot dolomite. At the time of inspection it was drilling in the upper member of the Kingsport formation at a depth of 610 feet; the estimated total depth will be about 800 feet. On completion of this hole it is anticipated that drilling will start on a new strike fence 400 feet southeast of the strike fence consisting of Holes GD-25, -26, and -27 in an attempt to intersect the southeastward extension of the main ore body.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature [illegible] Title ACTING EXECUTIVE OFFICER OME - REGION V Date MAY 13 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

H Reed

GEOLOGIST, U. S. G. S.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Puncheon Camp Creek Project
Grainger County, Tennessee

April 1959
by W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of April two holes were drilled on the Puncheon Camp Creek Project. Hole GD-27 was drilled 100 feet west of GD-26. It collared in the Mascot formation and was drilled to a depth of 770 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-11	Overburden	—	—	—
11-479	Mascot	CMSS @ 479	—	Dolomite
479-741	Kingsport	"R" @ 636 "S" @ 690 "T" @ 741	Shine @ 705, 706-707½, 3.20%	Dolomite, re-xl, ls, crackle breccia in "S" bed
741-770	Longview	"U" @ 756	—	Dolomite, re-xl

Hole GD-28 was drilled on a strike fence and is 290 feet west of GD-27. The hole collared in the Mascot formation and was drilled to a depth of 781 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-50	Overburden	—	—	—

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature V. J. Lynch Title ACTING EXECUTIVE OFFICER REGION V Date APR 23 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

W. A. Beck

MINING ENGINEER
U. S. BUREAU OF MINES

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

A Progress Report on the Luncheon Camp Creek Project
Grainger County, Tennessee

March 1959

by W. T. Hill

Docket No. 4580
Contract No. Idm-F 1088

During the month of March two holes were drilled on the Luncheon Camp Creek project. Hole CD-25 was drilled on the Green-Dalton farm. The hole was drilled 200 feet east of CD-11 and is the initial hole on a strike fence. It collared in the Mascot formation and was drilled to a depth of 703 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-25	Overburden	——	——	——
25-420	Mascot	CM @ 420	Trace ZNS @ 393	Dolomite
420-703	Kingsport	"R" @ 574 "S" @ 640	——	Dolomite, re-xl, and limestone, some lite crackle breccia

Hole CD-26 was drilled 100 feet southwest of CD-25. The hole collared in the Mascot formation and was drilled to a depth of 760 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks

Statement for drilling Luncheon Camp Creek Project DMEA Contract No. 4580 - March 1959

Core Hole No. OD-25

Footage drilled	703 @ $3.00/ft.	$2,109.00
Footage reamed	120 @ $2.00/ft.	240.00
		$2,349.00

I hereby certify that to the best of my knowledge and belief the above invoice is correct and just in accordance with the bid submitted by Putnam Drilling Company.

DMEA EXPLORATION PROJECT

INTERIM REPORT

DMEA-4580, Idm-E1088 - Zinc

Operator: B. H. Putnam, Operator. P.O. Box 65, Thorn Hill, Tenn.

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of Drilling Completed

	Since last inspection		To date	
Number of holes	3	45	51	
Footage	1524	1521' 73,925'	27,279	

Jackson 3/20/59

Holes showing:

a) Commercial zinc ore---------- 8
b) Non-commercial zinc mineralization----- 26
c) No zinc mineralization---------- 17

Additional data on the three holes completed during the interim follows:

Hole No. GD-24.- Located 100 feet south of GD-23 on Green-Dalton property. Total depth 501 feet. Coordinates N49593.43, E46186.29; Platform elevation 1438.35. Drilling began 1-31-59 and was completed 2-10-59. Brief log of hole: 0-65 overburden, collared in Mascot fm; top of Kingsport fm (chert matrix) at 176; top of "R" bed (?) at 337; top of "S" bed (?) at 409; top of "T" bed (?) at 449; hole bottomed at 501 feet.

Mineralization: 1' (290-291) heavy shines of sphalerite; shine at 295; 1/2'(296-296½) of est. 3% Zn; 1' (302½-303½) of est. 3% Zn; 1' (308½-309½) of est. 1% Zn; 1' (312½-313½) of est. 3.5% Zn; traces at 317, 325 and 327; 2'(333-335) of est. 2% Zn; 8½' (338-346½) of 2.0% Zn (assay); shines from 346-348; 9'(356-365) of 2.6% zinc (assay); shine at 378; 1'(386-387) of est.4% Zn;

shine at 391.

Hole No. DAL-1.- Located 200 feet west of GD-21 on Dalton property. Coordinates N49507.78, E45739.34; platform elevation 1495.83 feet. Total depth 410 feet. Drilling began 2-11-59 and was completed 2-19-59. Brief log of hole: 0-78 feet overburden, collared in Mascot fm; top of Kingsport fm (chert matrix) at 131½; top of "R" bed at 303; top of "S" bed at 365; top of "T" bed at 395; hole bottomed at 410 feet.

Mineralization: None - hole blank.

Hole No. Bul-1. - Located 400 feet west of DAL-1 on Rosie Bullen property. Coordinates N49157.03, E45523.29; platform elevation 1463.19 feet. Total depth 613 feet. Starting and bottoming drilling dates were not available at time of this inspection. Brief log of hole: 0-55 overburden, collared in Mascot fm; Cavity from 67-125; top of Kingsport fm (chert matrix) at 220; fault zone with 70 feet of actual vertical displacement from 241 to 305; top of "R" bed at 484; no "S" bed was recognizable; top of "T" bed at 551; top of "U" bed at 567; L-4 marker bed at 599; hole bottomed at 613 feet. Mineralization: None-blank hole.

610' for log [illegible]

Current drilling is in progress on Hole No. GD-25, located 250 feet southeast of GD-10. Core was examined to a depth of 110 feet.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature V. J. Lynch Title ACTING EXECUTIVE OFFICER OME - REGION V Date MAR 11 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp Creek Project
Grainger County, Tennessee

February 1959

By W. T. Hill

Docket No. 4580
Contract No. Idm-X 1088

During the month of February three holes were drilled on the Puncheon Camp Creek project. Hole GD-24 was drilled 100 feet south of GD-23. The hole collared in the Maccet formation and was drilled to a depth of 501 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-65	Overburden	—	—	—
65-176	Maccet	CMSS @ 176	—	Dolomite
176-449	Kingsport	"R" @ 338; "S" @ 409; "T" @ 449	290-291, 1.58% ZN, 296-296½, 6.04% ZN, 302-303½, 1.12% ZN, 308½-309½, shines, 312½-313½, 2.28% ZN, trace @ 317, 326, 328, 333-335, 2.74% ZN, 338-346½, 2.0% ZN, 346½-348, 1.82% ZN, 356-365, 2.61% ZN, 379-379½, 1.78% ZN, 386-387, 5.88% ZN	Dolomite & re-xl; R & S beds brecciated, some dry breccia
449-501	Longview	—	—	Mostly dry breccia

Hole DAL-1 was drilled on the W. Dalton farm. The hole is located 200' west of GD-21. It collared in the Maccet formation and was drilled to a depth of 410 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-77	Overburden	—	—	—
77-140	Mascot	CMSS @ 140	—	Dolomite
140-395	Kingsport	"R" @ 303, "S" @ 365, "T" @ 395	—	Dolomite & re-xl, some dry breccia
395-410	Longview	—	—	Dolomite

Hole BUL-1 was drilled on the R. Bullen farm 400 feet west of DAL-1. The hole collared in the Mascot formation and was drilled to a depth of 610 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-124	Overburden	—	—	—
124-220	Mascot	CM @ 220	—	Dolomite, numerous small shears
220	Kingsport	"R" @ 484	—	Dolomite & re-xl, faulted from 240-350 (70' vertical displacement)
551-610	Longview	"T" @ 551 "U" @ 580	—	Dolomite & re-xl

DMEA EXPLORATION PROJECT

INTERIM REPORT

DMEA-4580, Idm-E 1088 - Zinc

Operator: B. H. Putnam, Operator, P.O. Box 65, Thorn Hill, Tenn.

Location: Puncheon Camp Creek area, Grainger County, Tennessee

Summary of Drilling Completed

	Since last inspection	To date
Number of holes----------	3 ✓	48*
Footage----------	1090 ✓	25,755*

Holes showing:

a) Commercial zinc ore----------	8
b) Non-Commercial zinc mineralization----------	25
c) No zinc mineralization----------	15

Additional data on the three holes completed during the interim follows:

Hole No.GD-21 - Located 103 feet southwest of GD-20 on Greene-Dalton property. Coordinates N49680.01, E45,837.82; collar elevation 1496.26. Total depth 365 feet. Drilling began 12/10/58 and was completed 12/23/58. Brief log of hole: 0-70 feet overburden, collared in Kingsport fm; top of "R" bed at 210½; top of "S" bed at 298½; top of "T" bed 328; top of Longview dolomite at 328; top of "U" bed at 338; L-4 marker at 365; hole bottomed at 365 feet. Mineralization: None

Hole No. GD-22 - Located 100 feet north of GD-18 on Greene-Dalton property. Coordinates N49,854.49, E-46,043.65; collar elevation 1467.29 feet. Total depth 315 feet. Drilling began 1/14/59 and was completed 1/24/59. Brief log of hole: 0-62 feet overburden, collared in Kingsport fm; top of "R" bed at 130;

* Includes 6 holes and 3,351' disallowed by Fld. Team.
Talbot 2/24/59

top of "S" bed at 215½; top of "T" bed at 258; "U" bed from 274 to 285; top of L-4 marker at 301; hole bottomed at 315 feet.

Mineralization: 12' (143½-155½) of 3.4% Zn

3' (155-158) of 1.32% Zn

Strong shines of Zn 191 and 201

2.5'(212-214½) of 7.42% Zn

Strong shines of Zn at 224

5'(228-233) of 3.2% Zn

Hole No. GD-23, Located 100 feet south of GD-18 on Greene-Dalton property. Coordinates N49680.73, E46,138.93; elevation at platform 1459.66. Total depth 410 feet. Drilling began on 1/26/59 and was completed 1/30/59. Brief log of hole: 0--65 feet overburden, collared in Mascot fm; top of Kingsport (~~chert~~ chert-matrix) at 124; top of "R" bed at 277½; top of "S" bed at 343; top of "T" bed at 378; top of "U" bed at 390; hole bottomed at 410 ft.

Mineralization: 9½'(241½-251) of est. 3% Zn; shines of Zn at 255, 258, 258½; 3'(263-266) of est. 0.5% Zn; shines at 274; 1' (276-277) of est. 2% Zn; shines of zinc at 280½ and 281; 1/2' (284½-285) of est. 0.5% Zn; shines at 286; 3½ (320-323½) est. 10% Zn; shines at 325 and 329; 4'(329-333) of est. 2% Zn; traces from 333 to 336; weak shines from 336 to 337; traces from 340 to 343; 1½'(343-344½) of est. 2.5% Zn; 1½'(348½-350) est. 1.5% Zn; 2'(356-358) of 2.5% Zn; Shines at 362 and 363; 2'(369-371) of est. 2% Zn.

Current drilling is in progress on Hole No. GD-24, located 100 feet south of GD-23. This hole was near bottom at the time of this visit and core was observed to 460 feet. Some mineralization has been encountered but no estimates are given.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Robert A. Kamm Title EXECUTIVE OFFICER OME FIELD TEAM REGION V Date FEB 3 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Remarks:

(For Government use only)

V. Lynch
MINING ENGINEER
U. S. BUREAU OF MINES

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A Progress Report on the Puncheon Camp Creek Project
Grainger County, Tennessee

January 1959

By W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of January two holes were drilled on the Puncheon Camp Creek Project. Hole GD-22 was drilled 100 feet north of GD-18. The hole collared in the Kingsport formation and was drilled to a depth of 315 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-62	Overburden	-----	-----	---
62-258	Kingsport	"R" @ 130; "S" @ 215½; "T" @ 258	143½-144½, est. 6% Zn; 144½-145½, est. 1/2% Zn; 147½-149, est. 7% Zn; 149-151, est. 1/2% Zn; 155-155½, est. 4% Zn; 155½-158½, est. 1% Zn; shine @ 191, 200½-201; 212-215, est. 8% Zn; 215-217, est. 3/4% Zn; 228-230, est. 1% Zn; 230-233, est. 1½% Zn.	Dolomite & recrystalline, some limestone. In part, brecciated. FeS mineralization 143½-158½
258-315	Longview	"U" @ 274; L-4 @ 301	-----	Dolomite , rexl, some limestone; very silliceous, no breccia

Hole GD-23 was drilled 100 feet south of GD-18. The hole collared in the Mascot formation and was drilled to a depth of 410 feet.

Depth	Formation	Key Horizon	Zinc Mineralization	Remarks
0-65	Overburden	------	------	---
65-152	Mascot	CMss @ 152	------	Dolomite
152-378	Kingsport	"R" @ 277½; "S" @ 343; "T" @ 378	241½-251, est. 3% Zn; Shine @ 255, 258; 263-266; est. 1/2% Zn; shine @ 274; 276-277, est. 2% ZN; shine @ 280½, 281; 284½-285, est. 1/2% Zn; 320-323½, est. 10% Zn; shine 329; 329-333, est. 2% Zn; 333-336, traces; 340-343, traces; 343-344½, est. 2⅛% Zn; 348½-350, est. 1⅛% Zn; 356-358, est. 2½% Zn; shines 362, 363; 369-371, est. 2% Zn	Dolomite & re-xl, brecci-ated, scatter-ed FeS through-out
378-410	Longview	"U" @ 390	------	Dolomite and recrystalline

Drilling is now under way at location GD-24, 100 feet south of GD-23.

DMEA EXPLORATION PROJECT

INTERIM REPORT

DMEA-4580, Idm-E1088 - Zinc

Operator: B. H. Putnam, Operator, P. O. Box 65, Thorn Hill, Tennessee

Location: Puncheon Camp Creek Area, Grainger County, Tennessee

Summary of Drilling Completed

	Since last inspection	To Date
Number of holes	3	45
Footage	974	24,665

Holes showing:

a)	Commercial zinc ore	6
b)	Non-commercial zinc mineralization	25
c)	No zinc mineralization	14

Additional data on the three holes completed during the interim follows:

Hole No. GD-18.--Located 300 feet north of GD-16. Coordinates and collar elevation not available at time of inspection. Drilling began November 8, 1958 and was completed November 19, 1958. Depth 400 feet. Brief log of hole: 0-91 feet overburden, collared in Kingsport formation; top of "R" bed at 223; top of "S" bed at 308½; top of Longivew formation at 351; top of "U" bed at 359; hole bottomed at 400 feet.

Mineralization:--1' (203-204) of 5.36 % Zn
3½ (210-213½) of 1.90 % Zn
1' (214-215) of 2.46 % Zn
13' (219½-232½) of 2.19 % Zn
2' (243-245) of 3.08 % Zn
3' (248-251) of 0.78 % Zn
5' (257-262) of 2.44 % Zn
11½' (270-281½) of 3.75 % Zn
16½ (289½-306) of 3.25 % Zn
1' (328½-329½) of 0.92 % Zn
1½' (340-341½) of 0.40 % Zn
1½' (342½-344) of 2.12 % Zn
Shines of sphalerite from 199 to 200, at 238, 252, 284, to 289½, 317, 323 and 384½.

Hole No. GD-19.--Located 173 feet northwest of GD-18. Coordinates N 49,851.88, E 45, 938.63; elevation at derrick floor 1,467.21. Drilling began November 20, 1958 and was completed November 26, 1958. Depth 264 feet. Brief log of hole: 0-60 overburden, collared in Kingsport formation; top of "R" bed at 105; top of "S" bed at 188 (limestone from 188 to 191½); top of "T" bed at 230; top of "U" bed at 244; hole bottomed at 264.

Mineralization:--Scattered shines of sphalerite from 115 to 118; 12' (118-130) of est. 2 % zinc (50 % core recovery); shines at 173, 178; 1' (183-184) of est. 1 % zinc; shines at 185, 188 and 191.

Hole No. GD-20.--Located 205 ' due west of GD-18. Coordinates N 49,765.02, E 45,889.46; elevation at derrick floor 1,488.46, ground elevation 1,486.96. Drilling began December 1, 1958 and was completed December 10, 1958. Brief log of hole: 0-58 overburden, collared in Mascot formation; top of "R" bed at 157½; top of "S" bed at 223; top of "T" bed at 274; top of "U" bed at 290; hole bottomed at 310 feet.

Mineralization:--2' (204-206) of est. 5 % zinc; shines of sphalerite from 216 to 219; 3½ (222½-226) of est. 1 % zinc; 1' (238½-239½) of est. 2½ % zinc; 1' (242½-243½) of 0.75 % zinc, shine at 254; 2' (254½-256½) of 1 % zinc; shines of sphalerite at 261 and 296.

No drilling was in progress on the date of this inspection due to breakdown of equipment. Hole No. GD-21, located 103' southwest of GD-20 has been collared but is expected to be redrilled if fishing for string of tools, which twisted off in the hole, is unsuccesful.

Memorandum

To: Operating Committee, OME - Washington, D.C.

From: Field Team, OME - Region V - Knoxville, Tennessee

Subject: DMEA-4580, Idm-E1088(zinc) B. H. Putnam, Operator. Puncheon Camp Creek area, Grainger County, Tenn.

Enclosed are two copies each of the Operator's logs, with assays, of holes GD-7 through 11, which were drilled at the Operator's own expense.

Also enclosed are 2 copies each of the assays of holes GD-12, 14, 15 and 16. GD-13 was a blank hole.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc.". The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

A PROGRESS REPORT ON THE PUNCHEON CAMP CREEK PROJECT
GRAINGER COUNTY, TENNESSEE, FOR:

December, 1958

By: W. T. Hill

Docket No. 4580
Contract No. Idm-E 1088

During the month of December two holes were drilled on the Puncheon Camp Creek Project. Hole GD-20 was drilled 100 feet southwest of GD-19. The hole collared in the Kingsport formation and was drilled to a depth of 310 feet.

DEPTH	FORMATION	KEY HORIZON	ZINC MINERALIZATION	REMARKS
0-58	Overburden	—	—	—
58-274	Kingsport	"R" @ 157½; "S" @ 223; "T" @ 274	204-206, 2' @ 7.04%; shines 216-219; 238½-239½, 1' @ 5.00%; 242½-243½, 1' @ .75%; 254½-256½, 2' @ 1.36% shine @ 261	dolomite, re-xl; crackle breccia
274-310	Longview	"U" @ 290	shine @ 295	dolomite and re-xl; crackle breccia

Hole GD-21 was drilled 100 feet southwest of GD-20. The hole collared in the Kingsport formation and was drilled to a depth of 365 feet.

0-70	Overburden	—	—	—
70-328	Kingsport	"R" @ 210½; "S" @ 298½; "T" @ 328	—	dolomite and re-xl; numerous green shales and sands above "R"; "dry" breccia in "R" and "S"
328-365	Longview	"U" @ 338; L-4 @ 365	—	dolomite, recrystalline, and silica; brecciated, sealed with silica and gangue
