Re: DMA-185
Commodity-Copper

Dear Mr. Kimball:

It has been brought to our attention that possibly you have never received our letter, dated May 1, 1952 and addressed to Mr. Horace J. Knowlton, concerning your application for a production loan from the Government, and that our letter referring your application to the Reconstruction Finance Corporation was never received by that Agency.

Enclosed herewith please find a copy of this letter which is still relevant to your application. However, it may now be possible for you to receive a premium price for new copper production in case you can sign a firm contract for the delivery of copper to the Government.

This Agency has under consideration a program for the expansion of the production of copper from high cost mines which contemplates bringing in new copper during the years 1953 and 1954 for which an over-the-market price will be paid. Of course, such a program can be made available only to mines which can meet certain production specifications.

It is to be noted that to participate in this contemplated program it will be necessary to sign a firm contract for delivery of a specific amount of copper to the Government during the years 1953 and 1954. It is contemplated that no Government assistance other than the premium price will be afforded the producer. However, in certain cases where minimum financial assistance is necessary to start production, the Government, upon disclosure of all pertinent facts and justification for such action, will consider, on an individual basis, the advance of necessary funds to be repaid from proceeds of the production where private financial assistance is not obtainable. The price to be paid for the copper will be a negotiated price based upon the estimated or actual total production costs.

If you should wish to take advantage of either these new programs we shall be glad to furnish you with the necessary forms to apply.

Very truly yours,

Tom Lyen

Attention: Mr. R. A. Bingham

Re: DMPA-185
Connolly-Lappin

Gentlemen:

Enclosed herewith please find an application for a production loan of Richard F. Kimball in the amount of 125,000 for the Monarch Mine located in Tooele County, Utah. On May 1, 1952 a letter of the same nature enclosing two copies of his application was forwarded to you but was evidently misplaced in transit as there is no record of its receipt by your office.

Pursuant to the Defense Production Act of 1950, as amended, Executive Order 10161, as amended, and Delegation No. 3 from the Defense Production Administrator to the Defense Materials Procurement Administrator, I certify that the requested loan is not essential to the interest of national defense.

It is recommended that this loan be denied for the following reasons:

1. There are no blocked ore reserves in the mine.

2. It is unlikely that additional ores discovered and shipped from the property will return enough to make an overall profitable operation or to repay the loan.

3. The small size of the ore shoots and the amount of work involved in finding new shoots make exploration costly.

Transmitted herewith is the file consisting of the following:

DMPA 185 (2 copies)
Assay Smelter Sheet, Aug. 14, 1950 (1)
Supplement to Engineering Report by R. A. Nixon (2 copies)
Location Map (2 copies)
Cross section Map (2 copies)
Geologic Map (2 copies)

Very truly yours,

Tom Lyon

May 4, 1951

Memorandum

To: S. R. Wilson

From: Chief, Mining Division

Subject: DMA Docket 185, Monocco Mine, Tooele county, Utah

The report on the above property has been reviewed. In making a rough analysis of the report, it indicates that for an expenditure of $46,000 ore of about the same quantity and grade as already produced might be found. This would have an approximate gross value of less than $100,000 in 2,000 tons of ore. Deducting the $46,000 for exploration leaves about $25 a ton. Considering the high cost of mining, trucking, high metal losses and treatment charges on oxidized ore, the operation would undoubtedly result in a loss. However, since the government would be contributing $23,000 or $12.50 a ton, considering 2,000 might be developed a small profit to the operator might be realized.

I suggest you analysize the costs and smelter schedules on recent shipments and determine whether my rough analysis is true or not. Maybe my assumptions are too optomistic.

I am NOT returning the report and suggest your analysis be in the form of a supplement.

MONOCCO MINE, TOOELE COUNTY, UTAH

SUPPLEMENT TO ENGINEERING REPORT BY STEPHEN R. WILSON

The most recent settlement sheets on ore shipments were based on the following quotations: lead, 17 cents per pound; copper, 24 cents per pound; gold, 35 dollars per ounce; silver, 90 cents per ounce. The gross value of the average ore shipped, on this basis, is $48.90 per ton. The gross value of the anticipated 2,000 tons of new ores, assuming an average assay value the same as that shipped, is $97,800. Deducting the amount for exploration, $46,000, leaves a balance of $51,800, or on a 2,000 ton basis, $25.90 per ton.

Recent smelter settlement sheets show the following charges against the shipments:

Smelting charge (average)	$ 7.50 per ton
Trucking to smelter	8.00 per ton
Sampling and assaying (average)	1.50 per ton
	$17.00 per ton

Payment for contained metal in the ores using the average assay value of ores shipped, and settlement of recent shipments, is as follows:

Lead	2.9 percent-58 pounds Deduct 50 percent and pay for 29 pounds @ $.10533	$ 3.05
Copper	6.4 percent-128 pounds Deduct 15 pounds and pay for 113 pounds @ $.21108	$23.85
Gold	.019 ounce @ $31.81925	$ .60
Silver	8.5 ounces Pay for 95 percent @ $.90	$ 7.50
	Total payment	$35.00

The net smelter return for the average ore will be approximately $18.00 per ton ($35.00-$17.00). Direct mining costs, maintenance of camp in an isolated area and repair of equipment will require at least $10.00 per ton, leaving a maximum net of $8.00 per ton. Thus, if 2,000 tons are

shipped, a net of $16,000 can be expected under the present status of prices and wages. This amount is insufficient to match the applicant's $23,000, his share of the proposed $46,000.

Return of $23,000 to the government on the maximum royalty of 5 percent on 2,000 tons of ore ($36,000 net smelter), would not be possible.

MONOCGO MINE, TOOELE COUNTY, UTAH

January 31, 1951

Memorandum

To: Executive Officer, DMA Field Team, Region IV
224 New Customhouse, Denver 2, Colorado

From: Chairman, Copper Commodity Committee

Through: Operating Committee

Subject: Loan Application, Richard P. Kimball, Docket No. DMA-185.

Applicant claims to be producing high-grade copper ore on a small scale, intermittently, and requests loan to expand production, from the Monocco and other claims in the Gold Hill district, Tooele County, Utah. The application is very incomplete in many respects, but it appears worthwhile to make a field investigation of the project, hoping that with reasonable assistance some small increase in production can be assured. A copy of the application and all supporting data are therefore transmitted herewith with a request for an investigation and report at your earliest convenience. The applicant is being informed of this action, as indicated by the attached copy of a letter to him from the Director, Supply Division.

A copy of a recent memorandum from the Director, Supply Division, transmitted herewith, outlines the report a Commodity Committee is required to submit when recommending final action on a project. I have checked on the enclosed two copies of the outline the items of information with respect to which we are in most cases wholly or largely dependent upon the Field Team for the basic information. In the present case the Field Team may properly request the applicant to submit more detail as to his proposal.

May 4, 1951

Memorandum

To: S. R. Wilson

From: Chief, Mining Division

Subject: DMA Docket 185, Monocoo Mine, Tooele county, Utah

The report on the above property has been reviewed. In making a rough analysis of the report, it indicates that for an expenditure of $46,000 ore of about the same quantity and grade as already produced might be found. This would have an approximate gross value of less than $100,000 in 2,000 tons of ore. Deducting the $46,000 for exploration leaves about $25 a ton. Considering the high cost of mining, trucking, high metal losses and treatment charges on oxidized ore, the operation would undoubtedly result in a loss. However, since the government would be contributing $23,000 or $12.50 a ton, considering 2,000 might be developed a small profit to the operator might be realized.

I suggest you analysize the costs and smelter schedules on recent shipments and determine whether my rough analysis is true or not. Maybe my assumptions are too optomistic.

I am NOT returning the report and suggest your analysis be in the form of a supplement.

Re: Docket No. DMA-185
Richard P. Kimball

Mr. Horace J. Knowlton
216 Boston Building
Salt Lake City 1, Utah

My dear Mr. Knowlton:

This acknowledges receipt of the application of Richard P. Kimball, 291 East South Temple, Salt Lake City, Utah, for a loan of $25,000 for the equipment, development and operation of a copper mine in Tooele County, Utah. The application has been assigned the above Docket Number, and will be reviewed as promptly as possible.

Sincerely yours,

/s/ C. H. Johnson
for J. K. Richardson, Chairman
Copper Commodity Committee
