PROJECT SUMMARY REPORT

By: J. W. Alt July 24, 1958

1. Docket No. DMEA-1 & 1A (Lead-Zinc)
Contract No. Idm-E4
Property: Chief No. 1 Mine
Juab and Utah Counties, Utah

Operator: Chief Consolidated Mining Company
608 Dooly Building
Salt Lake City, Utah

Mine and Mine offices in Eureka, Utah

Operator's Property Rights: Owner

2. Contract dated June 13, 1951. To complete - 24 months.

Work Authorized

Project 1	2700 Foot Level	Total Cost
Drift North from the 18-411 winze 600 feet @ $30/ft.		$18,000.00
Drift East, north of the Leadville Fault 800 feet @ $30/ft.		24,000.00
Drift West, north of the Leadville Fault 400 feet @ $30/ft.		12,000.00
Raises, North Drift	100 feet @ $30/ft.	3,000.00
Raises, East Drift	100 feet @ $30/ft.	3,000.00
Raises, West Drift	100 feet @ $30/ft.	3,000.00
Total		$63,000.00

8623

Project 1A	3100 Foot Level	Total Cost
Sinking 18-411 winze, 4 compartment, 400 feet @ $350/ft.		$140,000.00*
Drift North from winze on 3100 foot level 600 feet @ $30/ft.		18,000.00
Drift East, north of Leadville fault 800 feet @ $30/ft.		24,000.00
Drift West, north of Leadville fault 400 feet @ $30/ft.		12,000.00
Raises, North Drift 500 feet @ $30/ft.		15,000.00
Raises, East Drift 500 feet @ $30/ft.		15,000.00
Raises, West Drift 500 feet @ $30/ft.		15,000.00
Total		$239,000.00

* Government will contribute ¼ of the total cost.

Total cost of Project 1A reduced by		70,000.00
Total, Project 1A		$169,000.00
Total, Project 1		63,000.00
Total		$232,000.00
Exhibits "B""J" "C"		
Electrical System installed	$ 78,900.00	
Pumping Equipment installed	126,020.00	
Sumps, extension of drainage workings and enlargements	26,500.00	
		231,420.00
Total Estimated Cost of the Project		$463,420.00
Government Participation @ 50%		$231,710.00

Amendments

No. Not numbered - dated November 26, 1951.

Delete Exhibit "A" and substitute an Exhibit "A" - change being in the allowable cost for shaft sinking in Project 1A.

No. Not numbered - agreed August 13, 1951.

Allows for cost of work performed by company prior to the date of the contract.
Allows for payment of work performed on unit cost basis.

No. 3 Effective as of date of contract.

Establishes monthly rates for additional salaried employees.

First Amended Exploration Project Contract

Date of Contract - June 16, 1953. To complete - December 13, 1954.

Specifies that the 18-441 winze shall be three compartments instead of four compartments and that a sump and pump station shall be constructed on the 3100-foot level.

Second Amended Exploration Project Contract

Date of contract - June 16, 1953. To complete - December 13, 1954.

A. Recapitualtion of Costs as Estimated in Original Contract

Project 1		$ 63,000.00	
Project 1A			
4-compartment,400-foot winze, ½ of which is allowable for Government contribution	$70,000.00		
Drifting and raising	99,000.00	169,000.00	$232,000.00
Exhibits "B" and "C"			
Electrical system		78,900.00	
Pumping system		126,020.00	
Sump, etc. (2700-foot level)		26,500.00	231,420.00
Total Estimated Cost			$463,420.00

B. Costs Incurred Under Original and First Amended Contracts (Subject to Audit), Plus Costs to Be Incurred, Costs (allowable) Incurred Under First Contract

Project 1	$ 63,999.54	
Project 1A (½)	17,697.76	
Pumping system	240,705.59	
Retroactive adjustment of wages	4,815.32	$327,218.21
Added work		
Sump and pump station at 3100-foot level (a unit)	$ 20,482.50	
Work described in Original Contract Uncompleted		
323 ft. of winze @ $360/ft., $116,280.00, ½ allowable	58,140.00	
330 feet of drifting, crosscutting, raising @ $34/ft.	112,200.00	190,822.50
Estimated New Total		$518,040.71

C. Specifies Original Estimate of Costs Plus Additions.

Amendments

No. 1 Effective August 27, 1953.

Recesses work of project from August 27, 1953 to November 1, 1953.

No. 2 Effective January 15, 1954.

Recesses work from January 15, 1954 to September 15, 1954.
Extends completion time from December 13, 1954 to September 16, 1955.
Extends royalty payment period from 10 years to 15 years.

No. 3 Agreed September 24, 1954.

Extends recess time to January 15, 1955.
Completion time extended to January 16, 1956.

No. 4 Agreed March 7, 1955.

Extends recess time to March 15, 1955.
Completion time extended to March 16, 1956.
Royalty payment period 15 years from the date of the Original Contract (June 13, 1951).

Work Completed

Drifting and crosscutting, 1,663 feet	$ 59,744.91
Raising, 300 feet	7,403.33
Shafts, 77 feet	36,025.56
Shafts, 253.7 feet	45,666.00
Electrical system, pumping equipment, sumps	238,060.53
Total Expenditures	$386,900.39

Work on the project was started June 15, 1951 and terminated on agreement effective October 15, 1955.

3. Report of Review: Second Interim Audit Certificate dated January 23, 1957. Not a final audit as the equipment has not been sold as of the date of this audit.

Total cost as billed by Contractor	$389,383.46
Plus reinstatement, Operator's error	176.79
Total True Cost Due	$389,560.25
Exceptions	2,659.86
	$386,900.39

The contract calls for participation of exploration expenses by the United States Government as follows:

50% of $350,874.83 or	$175,437.42
25% of $ 36,025.56 or	9,006.39
Total $386,900.39	$184,443.81
Government Participation	$184,443.81

Operator's final report dated February 7, 1957.
Field Team final report dated March 10, 1958.

4. Certification date: February 17, 1956.

The discovery consisted of lead-zinc ores occurring as replacement deposits in limestone. The ore reserve resulting from the work was estimated to be 675,000 tons, with a grade of 5.5% lead, 6.8% zinc, 5.1 oz. of silver, and 0.02 oz. of gold per ton. Approximately 140,000 tons of this ore have already been extracted.

5. Comments

Actual construction of pumping and electrical facilities was started during December, 1950. Under Amendment No. 1, this work was allowable at a total cost of $231,420.00.

The work was designed to explore the downward extension of the Chief ore shoots in the block of ground north of the Leadville fault.

Drifting and raising on the 2,700-foot level, costing $66,163.76 was completed July 1, 1952. The shaft was sunk to the 3,080-foot level by May 4, 1955, and installation of additional electrical and pumping facilities was completed at a total cost of $238,060.53. The 18/411 winze was sunk 330.7 feet at a cost of $81,691.56. A total of $386,900.39 was expended on all work completed. A decision to abandon the project, pull the pumps, and flood the lower levels was made by the company in September, 1955.

Additional drifting and raising in excess of 6,500 feet was accomplished by the company in developing the 2,700 level.

The program was successful in discovering substantial tonnages of ore, but subsequent decreases in the prices of lead and zinc, and other factors forced the mine to suspend operations.

Work accomplished under the contract has demonstrated that the main ore zone is continuing strongly at the 2,900-foot level. All workings below the 1,800-foot level are now flooded following the company's decision to terminate operations as of September, 1955.

Additional exploration on the property, with Government participation is not recommended.

Yes	No		
		1. (a)	Does the Operator stockpile ore subject to royalty repayment?
		(b)	If so, is segregation and identification procedure adequate?
		2. (a)	Does the Operator commingle production subject to DMEA or OME royalties with exempt production?
		(b)	If so, is the allocation of the commingled production equitable?
		3. (a)	Does the Operator stockpile mine or mill rejects (low grade ore, tailing, middlings, etc.) that may have potential value within the royalty payment period?
		(b)	If so, are adequate records maintained on such material to protect the Government's interest?
		4.	Are the assay controls in effect adequate?
		5.	Does the manner of disposing of production give the Government its fair royalty returns?
		6.	Do your periodic examinations of operations indicate the Operator is properly reporting his production of ores subject to DMEA or OME royalties?
		7.	Does the Operator buy from or sell to other Operators?

8. Current status of property. (Check one).

	Operating.
X	Inactive.
	Abandoned.

Date of last production if not operating.

Comment on items 1(b), 2(b), 3(b), and 4 to 6, if answer is No:

Mr. Maynard Carter, Clerk, orally reported April 12, 1962, that activity in the project area since February 2, 1960, the last date of advice from the Operator, was confined to minor repairs of the main shaft.

Re: DMA-1 and 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract Idm-E4

Gentlemen:

By the terms of the subject Second Amended Contract, as amended, and the certification of discovery or development dated February 17, 1956, all minerals mined or produced from June 13, 1951, to June 13, 1966, were subject to the Government's royalty as set forth in said second amended contract.

As the period during which production was subject to royalty has now expired, the Government according to its present records retains no claim or lien against the property subject to the second amended contract or any production therefrom. We, therefore, are closing our books and records on this second amended contract. Your attention, however, is called to the provisions of the second amended contract which require the Operator to keep and preserve certain records for the periods indicated.

Sincerely yours,

FRANK E. JOHNSON

Mr. E. R. Tomkinson, Secretary
Chief Consolidated Mining Company
Box 270
Eureka, Utah

Dear Mr. Tomkinson:

After the completion of the approved exploration work under the contract identified above, we asked to be informed about changes in the status of the property and production from it during the period of royalty obligation.

To assist you to furnish this information and to assure the accuracy of our records, please answer the questions on the back of this letter and return two copies to this office with copies of any pertinent documents.

Sincerely yours,

Frank E. Johnson

On or about March 9, 1963, the management will request proxies for the annual meeting to be held April 16, 1963, and a proxy statement and proxy in form as provided by the rules and regulations of the Securities and Exchange Commission will be mailed to the stockholders. This annual report is not a part of the proxy soliciting material, nor is it to be used as such.

The Annual Meeting of Stockholders is held on the third Tuesday in April at the office of the company in Tucson, Arizona.

ACCOUNTANTS' OPINION

The President and Board of Directors,
Chief Consolidated Mining Company:

We have examined the consolidated balance sheet of Chief Consolidated Mining Company and its consolidated subsidiaries as of December 31, 1962 (Exhibit A) and the related statement of consolidated income and earned surplus for the year then ended (Exhibit B). Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, with the explanation in Note 2 to the financial statements concerning the basis upon which fixed assets are stated, the accompanying consolidated balance sheet and statement of consolidated income and earned surplus present fairly the financial position of the companies at December 31, 1962 and the results of their operations for the year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

HASKINS AND SELLS

February 19, 1963

DIRECTORS' REPORT

To the Stockholders of
Chief Consolidated Mining Company:

During the past year Kennecott Copper Corporation completed in the area leased to them 2612 feet of underground diamond drilling, and 13,741 feet of surface rotary and diamond drilling.

The main purpose of surface drilling was to delineate the strike of the East Tintic thrust fault over a broad area. This is the fault which includes the Burgin ore body, and two of the holes drilled during the year indicate that this geologic structure may carry ore as far as 5000 feet north from the presently known Burgin ore body. While these indications at this time are extremely encouraging, it will not be definitely determined until the implications are further proven out by future drilling and underground work. If these indications can be proven, the total ore bearing area will equal or surpass all previous production in the Tintic District.

During the year a second underground shaft was put down to a depth of 140 feet below the 1050 level. This is 250 feet south of the bottom of the incline winze which we mentioned in our last annual report. The water flow in these workings was between 175 and 200 gallons per minute. The average of the assays of the bulk samples obtained between 116 and 140 feet in depth was 40% lead; .5% zinc; and 35.6 oz. of silver per ton. This indicated grade of ore in bulk samples was considerably above the grade indicated by the recovered core in adjacent drill holes. This, in general, would indicate that our overall estimates of the value of this ore body are on the conservative side.

Development work completed on the west end of the Burgin ore body in the area of the Eureka Standard fault has uncovered a silver bearing ore fissure which should add to the preliminary tonnage to be mined above the water table.

The rehabilitation of the Apex No. 2 shaft for ventilation purposes has been completed to the 700 ft. level as at this writing, and we anticipate that this work will be completed within the next 60 days. We have been advised by Kennecott personnel that at this point production from the Burgin shaft will commence on a limited basis and will probably be in the order of 50 to 70 tons per day. This tonnage

should continue until completion of the production shaft. The site of the production shaft has been leveled, the engineering completed, and the bids for the sinking of this facility should be let in the near future. Completion of this shaft according to newspaper releases by Kennecott should be within the next nine months. On completion of this shaft and ancillary drifts and cross cuts, this mine should come into full production. We estimate this will take approximately two years.

In the last few weeks, after many previous unsatisfactory negotiations, we believe that we are approaching a reasonable conclusion towards further financing of our Escalante joint venture. The water problem on this prospect is still the prime concern, and if our negotiations are successful, we believe by the end of this year we will know whether we have a silver mine or whether we should abandon this prospect.

We are continuing to examine silver properties brought to our attention which have the possibility of profitable production.

For the Board of Directors,

CECIL FITCH, JR.,
President.

Minority shareholders of Eagle and Blue Bell Mining Company (deficit)		(8,581)
Applicable to Chief Consolidated Mining Company		117,646
TOTAL		$ 109,065

The accompanying Notes to Financial Statements are an integral part of this statement.

Notes to Financial Statements

1. All subsidiaries are included in this consolidation except Eureka Mines Company, East Crown Point Consolidated Mining Company, and American Star Mining Company. These companies are inactive and still in the development stage.

2. Fixed assets are stated at cost, including approximately $450,000 which represents the valuation assigned to the Company's common stock issued therefor. Mining claims and property of $1,409,289 which are no longer producing are excluded from the balance sheet, having been written off against reserves. Fixed assets are stated net of $205,089 valuation reserve. The amounts at which the fixed assets are stated do not purport to represent their present realizable value or replacement cost. The Company's mines were not in operation during the year.

3. A contingent liability exists for repayment of funds advanced by the Defense Minerals Exploration Administration of the United States Government under its minerals exploration program in the amount of $47,659 at December 31, 1962, payable under a sliding scale of 1½% to 5% royalty on net smelter returns from ore, if and when produced, within a 15-year period from June 13, 1951.

May 8, 1963

OME
DEPARTMENT OF THE INTERIOR
MAY 9 1963
REGION III
DENVER, COLORADO

Mr. Hugh M. Connors, Asst. Field Officer
Office of Minerals Exploration
Federal Center, Building #2
Denver, Colorado

Dear Mr. Connors:

Several weeks ago a representative from your office visited with me in regards to the status of a certain DMEA contract that this Company has in effect with that agency. I advised your representative at that time that I would be out of town on other matters, and that if it was all right with him, I would reply to you direct at a later date. I am sorry that more time then I anticipated has expired.

Your representative referred particularly to a contract Docket No. DMEA-1 and 1A Commodity Lead-Zinc (original contract No. IDM-E4 dated June 13, 1951) with two subsequent amendments.

Your representative referred to certain news items that exploration and development work was currently being conducted by Kennecott Copper Corporation on a certain leased area of our Company's properties, part of which properties could become liable for royalty payments to the Government under the terms of the above referred to contract with DMEA.

This letter is for the purpose of advising you as follows:

1. That as of this date, no ores have been extracted or marketed from any of the areas within the aforesaid lease that the Government has an interest.

2. The lease agreement provides in Paragraph 16, Page 25 that Kennecott Copper Corporation is aware of the liability of Chief Consolidated Mining Company to the United States Government and its obligations thereunder. This lease agreement is a matter of record in the County Recorder's Office of Utah County, State of Utah, and open to the Government's inspection.

3. None of the exploration or development that has been performed on the leased area by Kennecott Copper Corporation is within any district

of the area covered by the aforementioned DMEA contract as far as the writer knows as of this writing. None is contemplated within the immediate future.

Yours very truly,

CHIEF CONSOLIDATED MINING CO.

W. W. Watson

From: Acting Field Officer, OME, Region III

Subject: Royalty matters
DMEA 1 and 1A (Lead-Zinc)
Chief, Consolidated Mining Company
(Chief No. 1 Mine)
Juab and Utah Counties, Utah
Second Amended Contract Idm-E4

Reference is made to your memorandum dated March 21, 1963 concerning the area subordinated by the subject Second Amended Contract.

Mr. Romslo obtained the following information concerning this matter during conversations with the company's secretary, Mr. W. W. Watson, 608 Dooley Bldg., Salt Lake City, Utah, April 8, 1963. Two tracts of the subordinated area are included in a voluminous lease between the Chief Consolidated Mining Company and the Kennecott Mining Corporation. You will be informed within a week or two by Mr. Watson that the Government's rights have been protected as described in the enclosed company's 54th annual report.

The Bergen ore body is being extended northward from the Bergen shaft but to date no ore has been found on the DMEA ground.

Second Amended Contract Idm-E4

It appears that the Kennecott Company is making plans for the new Burgin shaft and the ore body tributary thereto.

We have never been clear as to whether or not this new ore body occurs in land included under Exhibit B (yellow shading of map) contained in the Second Amended Contract. Such areas are subject to the payment of Government royalty until June 13, 1966.

At your convenience, would you be kind enough to look into this.

From: E. D. Talbert, Acting Chief (Signed) E. D. Talbert
Contract Administration and Audit Division

Subject: DMA-1 and 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract Idm-E4

The original and one copy of a Report of Royalty Review covering the subject contract are enclosed. If you concur in the facts stated therein, please make the following distribution:

(a) Original to the Fiscal Section, Division of Administrative Services, Office of the Secretary, Department of the Interior, Washington 25, D. C.; and
(b) One copy for your files.

This Report of Royalty Review is made for record purposes only; therefore, no copy for the Operator is provided.

As evidence of your concurrence, a copy of your memorandum transmitting the original report to the Fiscal Section should be furnished this Division. If for any reason you do not concur, both copies of the report should be returned to this Division with your comments.

To: George C. Selfridge, Chief
Division of Field Operations, OME
Washington 25, D. C.

From: Acting Field Officer, OME, Region III

Subject: DMA-1 & 1A (Lead-Zinc)
Second Amended Contract Idm-E4
Chief Consolidated Mining Company
(Chief No. 1 Mine)
Juab and Utah Counties, Utah

I have a request for a Check Sheet of Examining Engineer on the subject contract. I have no knowledge of the present status of the Chief No. 1 mine but it is not far from Glen L. Larsen's Iron Blossom mine, Contract 2129. The next time Mr. Romslo inspects the Larsen property he will get the required information on the Chief No. 1 mine.

Contract Administration and Audit Division

Subject: DMA-1 & 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract Idm-E4

As you probably have surmised, this Division is making an effort to "up-date" its royalty audits and reviews. Such effort is being concentrated particularly on those contracts which have not been reviewed or audited within the last three to four years or which have ceased production since the last review or audit.

The last royalty audit on the subject contract covered a period ending July 10, 1956. In order that an "up-dated" Report of Royalty Review may be prepared, your submission of an original and one copy of MME Form 22, Check Sheet of Examining Engineer, will be appreciated.

The Washington files indicate that the last inspection of the property was made on January 20, 1959, and the last date of advice from the Operator was February 2, 1960. I assume, also, that the August 29, 1956, lease agreement with Bear Creek Mining Company is still in effect. Please confirm or correct by appropriate statement under item 8 of the MME Form 22.

Memorandum

To: Chairman, Operating Committee, OME

From: OME Field Team, Region III

Subject: Docket No. DMEA 1 and 1A (lead-zinc) Contract ~~Idm-E4~~,
Chief Consolidated Mining Company, (Chief No. 1 ~~mine~~)
Utah and Juab Counties, Utah - FINAL SUMMARY REPORT

The Operator's final report was forwarded to your office by our memorandum of February 7, 1957, and the joint final engineering and geologic report by the OME field examiners was forwarded by our memorandum of March 17, 1958.

All matters prerequisite to closing the account have been resolved, including liquidation of the Government's interest in property acquired under the contract, and the account is considered closed in accordance with the Report of Review of reported project costs by the Contract Administration and Audit Division, dated October 10, 1958.

The contract was terminated before completion of all work provided for by a Termination Agreement, dated January 30, 1956, which was made effective October 15, 1955.

The exploration work completed consisted of 1663 feet of drifting and crosscutting, 300 feet of raising, and 330.7 feet of winze sinking. Acceptable work incident to the exploration work consisted of excavation for and installation of a pumping system, and installation of an electrical system; all at a total accepted cost of $366,626.13, to which the Government contributed $174,695.18.

The exploration work completed under the contract resulted in the discovery or development of a significant quantity of lead-zinc ore on which a Certification of Discovery or Development was issued February 17, 1956.

To: T. A. Christensen

From: Acting Executive Officer, OME Field Team, Region III

Subject: Docket No. IMEA 1 and 1A (Lead-Zinc) Second Amended Contract Idm-84, Chief Consolidated Mining Company, (Chief No. 1 mine) Juab and Utah Counties, Utah - FINAL SETTLEMENT

Reference is made to our memorandum of October 1, 1958, whereby we forwarded check No. 1705 from the subject Operator, in the amount of $6236.92, as settlement of the balance due for the Government's interest in property acquired under the contract.

In accepting the Operator's check, in effect, final payment was made to the Operator, which is in conformance with the Report of Review of the reported project costs by the Contract Administration and Audit Division, OME, dated October 10, 1958.

The account is considered to be closed, therefore, we are closing our records pertaining to the contract.

From: Acting Executive Officer, GSE Field Team, Region III

Subject: Docket No. MMA 1 and 1A (Lead-Zinc), Second Amended Contract No. [illegible], Chief Consolidated Mining Company (Chief No. 1 mine), Juab and Utah Counties, Utah

Enclosed are copies of the following correspondence pertaining to settlement of the Government's interest in property acquired under the subject contract:

1. Copy of our memorandum of October 1, 1958 to T. A. Christensen, whereby the Operator's check in the amount of $6,236.92, as the net balance due as the Government's share of property disposal, was forwarded for credit to voucher payments.

2. Copy of an instrument entitled "DISPOSAL OF GOVERNMENT'S INTEREST IN PROPERTY," dated September 23, 1958, signed by the Acting Director, Office of Minerals Exploration.

Copies of all previous correspondence relative to the matter of property liquidation have been forwarded to your office.

In arriving at the balance due the Government, and in accepting the Operator's check in payment thereof, in effect, final payment has been made to the Operator. Therefore, we will appreciate your furnishing to this office a Final Certificate and Report of Audit, or Report of Review of the reported project costs, whichever the case may indicate.

(Chief No. 1 mine)
Utah and Juab Counties, Utah

Dear Mr. Watson:

Receipt is acknowledged of your letter dated September 26, 1958, whereby you forwarded check No. 1765, in the amount of $6,236.92, as the net amount due the Government on liquidation of the Government's interest in property acquired under the contract.

Enclosed is the "Operator's Copy" of an instrument, entitled "DISPOSAL OF GOVERNMENT'S INTEREST IN PROPERTY", dated September 23, 1958, signed by the Acting Director, Office of Minerals Exploration, whereby the Government sells, assigns, transfers, and sets over to Chief Consolidated Mining Company all property acquired under the Second Amended Contract No. Ilm-24.

In reference to the request contained in your letter, records in this office, which are tentative and subject to audit, indicate the amount due the Government, contingent on production from the property, to be $47,659.28.

Very truly yours,

Dear Mr. Harshman:

I enclose our Company's check No. 1785 in the amount of $6,236.92 in full payment for the Government's interest in the property acquired under the above captioned contract as outlined in your letter of September 25. We shall appreciate receiving the instrument transferring the Government's right, title, and interest in this property.

According to the terms of the contract, there remains an amount due the Government which is contingent upon ores produced from the property for a period of fifteen years from the date of execution of the Contract. So that our records will be in agreement, we will appreciate receiving from you a statement of the amount of this contingent liability as it appears on the Government's books.

Very truly yours,

Dear Mr. Watson:

Reference is made to your letter of September 9, 1958 and prior correspondence, relative to the settlement of the Government's interest in the remaining items of jointly owned property acquired under the Contract.

We have at hand an instrument, signed by the Acting Director, Office of Minerals Exploration, Washington, D. C., transferring to your Company all right, title, and interest in the property acquired under Contract No. Idm-84, which we are authorized to forward to you upon receipt of payment by your Company of the amount due the Government. The amount due the Government in the transaction is as follows:

Agreed value of the Government's interest in the remaining items of property		$ 6,500.00
Amount previously withheld from reimbursement to Chief Consolidated Mining Company	$ 1,500.00	
Overpayment to Chief Consolidated Mining Company as per Second Interim Audit, dated 8/19/58	1,236.92	
Balance of withheld amount due Chief Consolidated Mining Company		263.08
Amount due the Government		$ 6,236.92

We trust that the foregoing meets with your approval and that we will hear from you at an early date.

To: Chairman, Operating Committee, DMEA

From: Acting Executive Officer, DMEA Field Team, ~~Region III~~

Subject: Docket No. DMEA 1 and 1A (Lead-Zinc), Contract No. Idm-E4, Chief Consolidated Mining Company (Chief No. 1 mine), Utah and Juab Counties, Utah

Enclosed are the original and two copies of a letter from the Operator, dated September 9, 1958, advising this office that it will pay the Government an amount of $6,500.00 for the Government's interest in the balance of jointly-owned property acquired under the contract. This is the amount which you indicated would be acceptable to the Government in your letter to this office, dated August 22, 1958.

Will you please prepare the necessary instrument to transfer ownership of the jointly-owned property from the Government to Chief Consolidated Mining Company and forward the instrument to this office for signature by the Operator. Upon execution of the instrument, the Operator will forward a check for the full amount to the Government.

As indicated in your letter of August 22, 1958, the Operator's net indebtedness will be $6,236.92.

Re: Docket No. DMEA 1 & 1A (Lead-Zinc)
Contract No. Idm-E4
Chief Consolidated Mining Company
(Chief No. 1 mine)
Utah and Juab Counties, Utah

Dear Mr. Watson:

Reference is made to your letter of August 6, 1958, wherein you bid $5,000.00 for the Government's interests in the remaining portion of the jointly owned equipment acquired under the contract.

The letter was forwarded to the Washington Office, DMEA for their consideration on which we have been advised that the $5,000.00 bid is not considered adequate, but that they would accept an offer of $6,500.00 for the Government's interests in the remaining items of equipment, material and supplies acquired under the contract.

The sum of $1,500.00 presently withheld from reimbursement by the Government is in part offset by the overpayment to Chief Consolidated of the sum amounting to $1,236.92 as detailed in the Second Interium Audit Certificate and Report forwarded by T. H. Brading, DMEA Auditor, by letter of August 29, 1958. Therefore, there would remain only the sum of $263.08 with which to credit against your payment instead of the $1,500.00 as mentioned in your letter of August 6, 1958.

We will be pleased to receive your reply to the above at an early date.

Very truly yours,

SOLICITOR

Re: Docket No. DMEA 1 & 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract No. Idm-E4

Dear Mr. Townsend:

We have your letter of August 8, with enclosures, covering the Government equity in equipment purchased under the cited contract.

The Operator's letter of August 6, 1958, neglects the fact that the Second Interim Audit by Brading showed an overpayment by the Government of $1,236.92.

We do not consider the offer of $5,000 as adequate but we would accept an offer of $6,500. Under such an arrangement the Operator's indebtedness would be $6,500 plus $1,236.92, minus the $1,500 of deferred salvage credit, or a net of $6,236.92. Will you please see if such an arrangement can be made.

Sincerely yours,

George C. Selfridge

Chairman, Operating Committee (JHB)

Second Amended Contract No. Idm-E4

Dear Mr. Townsend:

We have your letter of August 8, with enclosures, covering the Government equity in equipment purchased under the cited contract.

If this Operator is willing to increase its cash offer from $3,500 to $5,000 (plus the $2,500 of deferred salvage credit) we would be willing to close out the account. Will you please see what can be done.

Sincerely yours,

Memorandum

To: Chairman, Operating Committee, DMEA

From: Alternate Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 1 and 1A (Lead-Zinc) Contract Idm-E4
Chief Consolidated Mining Company (Chief No. 1 mine)
Utah and Juab Counties, Utah

Enclosed are the original and one copy of the Operator's letter of August 6, 1958, with attached data which are forwarded in reference to Mr. Griswold's telephone conversation with E. N. Harshman on August 4, regarding liquidation of the Government's interest in the balance of the jointly owned property at the project.

As soon as Mr. Harshman advised me of his conversation with Mr. Griswold, I called Mr. Watson of Chief Consolidated Mining Company and asked him if he would be interested in submitting a firm bid at this time for the Government's interest in the remaining items of property under the contract.

A review of our records indicates that we have received a return of $6,307.53 from sale of the property to date.

In order to close our files on the project it is recommended that the Operator's bid for the Government's interest in the remaining portion of materials and supplies be accepted.

Re: Docket No. DMEA 1 and 1A (Lead-Zinc)
Second Amended Contract Idm-E4
Termination Agreement dated 1/30/56

Dear Mr. Townsend:

I have discussed with our President and General Manager, Mr. Fitch, the matter of final disposition of the jointly owned equipment under the terms of the above cited contract as you requested in our telephone conversation on Monday of this week.

In this connection, we wish to reiterate our previous offer which was contained in my letter to Mr. Traver of October 16, 1956, a copy of which is attached. In substance, we offered $5,000.00 to the Government for title to the remaining equipment to be paid $3500.00 in cash and $1500.00 which is presently held for our account by the Government under the terms of Article 4 of the Contract.

For your information, I am enclosing a list of the remaining equipment. The cost of this equipment is approximately $85,680.00 of which the Government furnished 50% or approximately $42,840.00.

From the standpoint of our own mining operations, there is very little likelihood that we will ever need any of this equipment, consequently our only means of reimbursing ourselves will be through sale to others. As the equipment is very specialized, the possibilities of our finding immediate buyers is very remote, and it will probably take a number of years to dispose of most of the items.

Very truly yours

W. W. Watson

Dear Mr. Watson:

Form MF-104, Operator's Monthly Report and Voucher, dated March 1958, covering salvage costs incurred during the period January 1956, through February 1958, has been received in this office and is being processed for payment. The following deductions have been made:

Disallowance, Salvage Costs for January, 1956

Review of your records indicates that the salvage costs for January 1956, were incurred prior to January 30, 1956, and are therefore not allowable under item 3 of the Termination Agreement, dated January 30, 1956. The reported labor costs and applicable Workmen's Compensation Insurance for January 1956, are disallowed.

Amount Withheld

In accordance with Article 4 of the contract form, an amount of $1500.00 is withheld pending liquidation of additional jointly-owned equipment.

You will be further advised of the details of the above deductions by means of an Administrative Audit Difference Statement, which will be forwarded to you by the Finance Office, Region III. If you have any questions regarding the matter, please feel free to contact this office.

Very truly yours,

AIRMAIL

Memorandum

To: Chairman, Operating Committee, DMEA

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 1 & 1A (Lead-Zinc) Contract Idm-E4, Chief Consolidated Mining Company, (Chief No. 1 mine) Juab and Utah Counties, Utah

Reference is made to Form MF-104, Operator's Monthly Report and Voucher, covering salvage costs incurred by the subject Operator from January 30, 1956, through February 1958, copies of which were forwarded to you with our memorandum of April 25, 1958. Your advice is requested in the following matter.

The first 77 feet of winze sinking under the contract was performed on a cost incurred basis at 25 percent Government contribution, therefore the Government's interest in property acquired in connection with the winze sinking is 25 percent of the proceeds from liquidation. The only applicable item sold to date is the Hydromucker which was salvaged prior to January 30, 1956, and which was purchased by the Operator. The Government was reimbursed for 25 percent of the resale price.

We presume that the Government would normally participate to the extent of only 25 percent in the salvage costs for property acquired in connection with the winze sinking where Government participation was only 25 percent; however, a review of the Operator's accounting reports and vouchers indicates that, with the exception of the Hydromucker, all property purchased in connection with the winze sinking consisted of minor items, which for the most part, were expendable. The value of any remaining items which may have been salvaged from the winze sinking operation would be insignificant in relation to the total value of all salvaged property.

It will be very difficult if not impossible to determine what portion, if any, of the reported salvage costs are applicable to

property purchased for the winze sinking operation, therefore we recommend that the Government participate on a straight 50 percent basis in all of the acceptable salvage costs incurred on and subsequent to January 30, 1956, the date of the Termination Agreement. We will appreciate prompt advice in the matter.

Re: Docket No. DMEA 1 and 1A (Lead-Zinc)
Second Amended Contract Idm-E4,
Termination agreement dated Jan. 30, 1956

Dear Mr. Harshman:

On April 22 we sold to the Centennial Development Company, Eureka, Utah, an additional 150 feet of the following described jointly owned equipment under the terms of the above cited contract:

150 feet - 2/0, 37 strand single conductor 5KV, 10/64 Eskerona, 5/64 Neoprene Cable.

The selling price was 20¢ per foot or $30.00, of which, under the terms of the contract, the Government is entitled to 50% or $15.00.

Please find our check in the amount of $15.00 in payment thereof.

Yours very truly

Re: Docket No. DMEA-1 & 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract No. Idm-E4

Dear Mr. Harshman:

We have your memorandum of April 25, 1958, with enclosure, relative to salvage costs submitted by the cited Operator. Beyond doubt it was advisable that the jointly owned equipment be brought to the surface, rather than having been left underground to suffer rapid deterioration.

We suggest that you reimburse this Operator for about half of the Government's share of the salvage expense, and make settlement of the balance as equipment is liquidated.

Sincerely yours,

George C. Selfridge

Memorandum

To: Chairman, Operating Committee, DMEA

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 1 and 1A, (Lead-Zinc) Contract Idm-E4, Chief Consolidated Mining Company, (Chief No. 1 mine) Utah and Juab Counties, Utah

Enclosed for your information and consideration are three photo copies of the following:

1. Voucher and accounting Forms MF-104 and MF-104A, covering costs incurred by the Operator during the period from January 30, 1956, through February 28, 1958, in connection with the salvage of jointly-owned property acquired under the terms of the contract.

2. Three supplemental sheets showing distribution of the reported costs.

3. Letter from the Operator dated April 23, 1958, requesting reimbursement for the Government's share of the salvage costs, presuming that the costs are properly reported.

Item 3 of the Termination Agreement provides for Government contribution in the costs of property disposal incurred on and subsequent to January 30, 1956; however, we believe that it may be desirable to withhold reimbursement pending completion of closing procedures, as provided under Article 4 of the contract form.

The property liquidation is being handled direct by the Washington Office, therefore processing of the current voucher is deferred pending receipt of advice as to whether or not reimbursement to the Operator should be withheld, and if so to what extent. Your early attention and reply to this office will be appreciated.

Re: Docket No. DMEA 1 and 1A (Lead-Zinc)
Second Amended Contract Idm-E4
Termination Agreement Dated
January 30, 1956

Dear Mr. Harshman:

This will advise you that the salvage operation in connection with the above cited contract was completed during Feb., 1958, and all of the jointly owned equipment, which has not already been sold, is now on the surface at our property in Eureka, Utah.

In accordance with Mr. W. M. Traver's letter of June 22, 1956, we enclose the original and four copies of Form Mf 104 and MF 104-A and substantiating data.

If these meet with your approval, will you kindly have the same processed so that we may be reimbursed for the Government's share in this additional cost.

Very truly yours

W. W. Watson

Re: Docket No. DMEA-1 & 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract No. Idm-E4

Dear Mr. Watson:

This is with reference to our phone conversation of March 4, and our telegram to you of the same date, regarding property disposal under the cited contract.

In view of the present condition of the mining industry, we are not sure that it would be wise, at all times, to insist upon securing an equipment selling price of forty five percent of new cost. Quite possibly there may be times when a lower offer would be about all that could be hoped for. In such instances, when you might feel that it would be to the best interest of your concern to effect such a sale, the Government would not be inclined to enter an objection.

Sincerely yours,

(for)

Administrator

Dear Mr. Watson:

Receipt is acknowledged of your letter of April 9, 1958, and company check No. 1765, in the amount of $638.88, as liquidation of the Government's interest in 6,703 feet of No. 2/0 copper cable, which was acquired under the subject contract.

Yours very truly,

Re: Docket DMEA-1 & 1A (Lead-Zinc)
Second Amended Contract Idm-E4

Dear Mr. Harshman:

We recently sold to the Imperial Wire and Cable Company of Los Angeles, California, the following jointly owned equipment under the terms of the above captioned contract:

6703 ft. 2/0, 37 strand, single conductor 10/64 Eskerona, 5/64 Neoprene Insulated copper cable at 20¢ per ft.	$1,340.60
Less: Selling expenses as detailed on the enclosed voucher	62.85
Balance	$1,277.75.

The Government's interest in this transaction amounts to 50%, or $638.88 for which please find our check enclosed.

Yours very truly

SUMMARY

The Chief Consolidated Mining Co. conducted a DMEA exploratory project for lead-zinc ores on property near Eureka, Juab County, Utah, during the period June 15, 1951, to May 4, 1955. The program was successful in discovering substantial tonnages of ore, but subsequent decreases in the prices of lead and zinc, and other factors forced the mine to suspend operations.

Application for assistance was made in December 1950. A contract was approved for a total expenditure of $518,040.71. The work consisted of installing additional electrical and pumping facilities, drifting and raising on the 2,700-foot level, sinking from the 2,700-foot level to the 3,100-foot level, and drifting and raising on the 3,100-foot level. The work was designed to explore the downward extensions of the Chief ore shoots in the block of ground north of the Leadville fault.

Drifting and raising on the 2,700-foot level, costing $66,163.76, was completed July 1, 1952. The shaft was sunk to the 3,080-foot level by May 4, 1955, and installation of additional electrical and pumping facilities was completed at a total cost of $238,060.53. The 18/411 winze was sunk 330.7 feet at a cost of $81,691.56. A total of $386,900.39 was expended on all work completed.

A decision to abandon the project, pull the pumps, and flood the lower levels, was made by the company in September 1955.

Additional exploration or development with Government participation is not warranted at this time.

The project was certified February 17, 1956, and the Government is entitled to royalties on any production from ground encumbered by the contract for a period of 15 years or to June 13, 1966.

Under present conditions it is not economically feasible to mine the deep ores of the Chief mine. As a result of the exploration, substantial tonnages of lead-zinc ore reserves are inferred and may be mined when conditions warrant.

INTRODUCTION

The Chief Consolidated Mining Co. of Salt Lake City, Utah, with mine and offices at Eureka, Utah, obtained a DMEA loan of $463,420 on June 13, 1951, to explore for lead-zinc ores (fig. 1). The Chief mine is one of the most recently operating of the larger mining properties of the Tintic district. The Tintic district was organized in 1870, and since that time has produced ores valued in excess of $450 million.

The company owns a large part of the patented mining property of the Tintic district. The original contract encumbered "10,000 acres of mineral lands owned in fee simple, with the exception of presently known ore bodies south of the Leadville fault and above the 2,450 level of the 18/411 winze." In addition to properties owned, the company controls other properties under lease. Several small excluded areas also are present within the acreage (figs. 2 and 3).

A remarkably continuous zone of connected and detached ore bodies has been mined from the surface at the Mammoth mine, northward through the properties of the Grand Central, Bingham Mines, and into the property

of the Chief Consolidated Mining Co., a distance of 1-1/4 miles (fig. 4). Prior to the establishment of the DMEA project, this "run" of ore, which has an average dip of about 17° to the north, had been mined to a depth of 2,600 to 2,700 feet in the Chief No. 1 mine. The DMEA project was designed to explore and develop the ores at greater depth, thereby augmenting the inferred ore reserve and assuring a maximum daily output of ore in keeping with the existing production possibilities of the mine.

Project work consisted of stipulated amounts of drifting, raising, and sinking, plus the installation of improved electrical and pumping systems. The project was originally to have been accomplished in 2 years, but conditions made it impossible for the operator to complete the work within the allotted time. Four amendments were made to the original contract. On June 16, 1953, the original contract was amended and superseded by the first and second amended contracts. Four amendments were made to the second amended contract, all of which extended the time for completion of the work.

The primary factor contributing to increased mining costs is a heavy flow of water below the 1,800-foot level of the mine. Seven thousand gallons of water per minute is discharged from the lower levels. In addition to the pumping problem, the mine faces ever-increasing development costs because of the distance of ore faces from existing shafts and winzes.

At the inception of the DMEA program, mining had progressed to the 2,700-foot level. Reserves of ore in the block of ground south of the Leadville fault-dike had been nearly exhausted above the 2,600-foot level. It was known that ore occurred north of the dike, but attempts to mine it had resulted in an increase of waterflow beyond the capacity of the existing pumping system. It became apparent that, in order to develop the block of ground north of the dike, it would be necessary to augment the pumping system, drain the north block, and prepare for mining at greater depth and at greater distance from the existing 18/411 service winze.

LOCATION AND ACCESSIBILITY

Property of Chief Consolidated Mining Co. covers a large area in T. 10 S., R. 2 and 3 W., S.L.B. and M., Juab and Utah Counties, Utah. The principal mine workings lie directly under the town of Eureka in Juab County.

Eureka is served by the Union Pacific and Denver and Rio Grande Railroads and U. S. Highway 6. Salt Lake City, approximately 90 miles to the north, is the principal source of supplies for mines of the district.

The climate of the Tintic district is characterized by severe winters and cool, dry summers. The topography is moderately rough, with broad valleys flanking the Tintic Mountains to the east and west. The altitude at the collar of the Chief Consolidated No. 1 shaft is 6,577 feet.

HISTORY AND PROPERTY OWNERSHIP

Property of Chief Consolidated Mining Co. is located in the Tintic mining district, Juab and Utah Counties, Utah. The company owns a large part of the mining claims in the area. The original contract encumbered "10,000 acres of mineral lands owned in fee simple, with the exception of presently known ore bodies south of the Leadville fault and above the 2,450 level of the 18/411 winze." The company also holds other properties under lease.

The Chief Consolidated Mining Co. was incorporated in 1909, and since that date production has been virtually continuous, although at a greatly reduced rate during depression years and periods of low metal prices. The first work consisted of retimbering and deepening an existing 800-foot shaft. During the period 1909 to 1918 ores were mined between the 600-foot level and the 1,800-foot level. The 1,800-foot level is the lowest level above the permanent water table.

As the ores were mined from the upper levels it became apparent that sustained ore production would require pumping water from levels below the 1,800-foot level. Water was first pumped to the surface, but later an exploratory drift on the 1,600-foot level encountered a large natural cavern. As an experiment, an attempt was made to fill this cavern by pumping water into the opening. Strangely the cavern did not fill; thus it was decided to pump the entire flow into the cavern. One hundred pounds of sodium fluorescein salt was added to determine if the water returned to the mine and was recirculated. No trace of return

water was found by this test or by subsequent tests using other indicators. All water pumped during recent operations from levels below the 1,800-foot level was discharged into this cavern.

A continuous zone of ore bodies has been mined from the surface at the Mammoth mine, through the Grand Central and Bingham mines and into the property of Chief Consolidated Mining Co., a distance of 1-1/4 miles. This ore zone has attained a depth, in the Chief property, at which profitable operation is limited to periods of favorable metal prices. Exploration outlined in the DMEA contract was designed to search for ores at greater depth.

DESCRIPTION OF THE EXPLORATORY WORK

The original contract permitted the operator to complete 400 feet of winze sinking, 3,600 feet of drifting and 1,800 feet of raising under a long-form contract. The cost of installing additional electrical and pumping facilities also was allowed. The total cost of this work originally was estimated at $463,420.

Actual construction of pumping and electrical facilities was started during December 1950. Under Amendment No. 1, dated August 13, 1951, this work was allowable at a total cost of $231,420.

Exploration was divided into two projects. Project I, under Amendment No. 2, dated November 26, 1951, allowed the following:

2,700-foot level

Drift north from 18/411 winze, 600 feet at $30 a foot	$18,000
Drift east, north of Leadville fault, 800 feet at $30 a foot	24,000
Drift west, north of Leadville fault, 400 feet at $30 a foot	12,000
Raises, north drift, 100 feet at $30 a foot	3,000
Raises, east drift, 100 feet at $30 a foot	3,000
Raises, west drift, 100 feet at $30 a foot	3,000
Total	$63,000

Project 1-A, under Amendment No. 2 dated November 26, 1951, allowed the following:

3,100-foot level

Project 1-A

Sink 18/411 winze, 4-compartment, (from 2,749-foot level to 3,149-foot level) 400 feet at $350 a foot, at an estimated total cost of $140,000. One-half of such cost only to constitute an allowable cost of the project	$70,000
Drift north from winze on 3,100-foot level, 600 feet at $30 a foot	18,000
Drift east, north of Leadville fault, 800 feet at $30 a foot	24,000
Drift west, north of Leadville fault, 400 feet at $30 a foot	12,000
Raises, north drift, 500 feet at $30 a foot	15,000
Raises, east drift, 500 feet at $30 a foot	15,000
Raises, west drift, 500 feet at $30 a foot	15,000
Total	$169,000

Work was started on Project 1 June 15, 1951. Work on Project 1-A (18/411 winze sinking) was started during November 1951. Drifting on the 2,700-foot level progressed satisfactorily. Ore was encountered at projected locations and mining proceeded at the anticipated rate, notwithstanding the excessive flow of water. Sinking operations in the 18/411 winze were impeded by extensive preparations necessary for control of the large volume of water. As a result of a labor strike work was stopped July 1, 1952, and Project 1 was considered complete with total advances of 1,663 feet of drifting and 300 feet of raising. Additional drifting and raising in excess of 6,500 feet was accomplished by the company in developing the 2,700-foot level (fig. 5). During this period drifting costs averaged $34.03 per foot and raising costs, $25.68 per foot. The cost of drifting exceeded the estimated figure by $4.03 per foot. Raising was accomplished for $4.32 per foot less than estimated. However, the allowable cost for Project 1 was exceeded by $999.54, thus the remaining 137 feet of drifting stipulated was not allowed.

Progress on Project 1-A at this time totaled 77 feet of sinking in the 18/411 winze. This work was accomplished at a cost of $467.86 per foot as compared to the estimate of $350 per foot.

Labor trouble which forced cessation of operations July 1, 1952, was settled by agreements between the company and the union and operation of the mine was resumed July 1, 1953. The lower levels, which had been partially flooded to minimize pumping costs, were dewatered. Work on

Project 1-A was resumed during August 1953 under revised contracts designated the first and second amended contracts. These contracts recapitulated and sanctioned all allowable costs incurred to July 1, 1953, and granted additional costs. Target objectives remained the same, but the project was brought under a short-form contract. The total allowable cost of all work under the new short-form contract was $518,040.71. Increased performance expenses due to unforeseen physical conditions and rising material and labor costs made contract revisions necessary.

Work on Project 1-A progressed only intermittently because of operational difficulties. Excavation for an enlarged 1,800-foot-level station and installation of a new hoist for the 18/411 winze on company account contributed to the delay. It became evident to company officials that ore reserves disclosed by Project 1 exploration, on and above the 2,700-foot level, were not sufficient to keep the mine operating while Project 1-A was completed. A DMPA loan was secured for development of the 2,800-, 2,900-, and 3,000-foot levels. Sinking in the 18/411 winze was delayed while the 2,800-foot-level station was excavated. Work on the 2,800-foot-level development drift tended to slow operation in the winze. The water drainage from the 2,800-foot level increased difficulties and made necessary an escape raise to the 2,700-foot level. The company anticipated the same difficulties on the 2,900-foot level and requested DMEA funds for a safety sump to permit water storage on this level. The request was denied on the

ground that it was relative to and caused by the intermediate level DMPA development, and costs could not be assumed by DMEA. The escape raise was driven and the emergency sump was completed with DMPA and company funds. This work necessarily impeded the winze-sinking operation.

Sinking operations were suspended in 1953. At this time company officials made a detailed study of the position and attitude of the ore zone in light of developments on and below the 2,700-foot level. As a result of this study application was made to change the sinking plans and drift on the 3,000-foot level as a substitute for drifting on the 3,100-foot level. This was denied, but permission to extend the time for completion was granted. Sinking was resumed February 25, 1955, and as of May 4, 1955, the winze was stopped at the 3,080-foot level. A total of 330.7 feet of sinking was completed. During September 1955 company officials decided to abandon the lower levels of the mine. Salvage operations were started preparatory to pulling the pumps and flooding the area.

Utilizing DMPA funds the company developed the 2,800-foot level and partially developed the 2,900-foot level. Mining was started by raising into the first ore channel intersected by diamond drill holes drilled from the 2,900-foot level (figs. 6 and 7).

GENERAL GEOLOGY

The sedimentary rocks of the Tintic district are folded into a broad, asymmetric syncline which extends through the district in a northerly direction. The syncline has a steeply dipping west limb and a gently dipping east limb. The fold plunges gently to the north. The Chief mine is developed in the steep western limb and the trough of the syncline. Sedimentary rocks ranging in age from Cambrian to Mississippian are found in the district. Tertiary igneous rocks which are in part intrusive quartz monzonite and monzonite, and in part effusive quartz latite, latite, and andesite, also are present.

Faulting and fissuring are prominent throughout the district. The predominant faults strike easterly or northeasterly. Four of these major faults traverse the property of the Chief Consolidated Mining Co. Four major north-trending vein zones are recognized in the district. The Chief mine is the northernmost of a series of mines along the second zone from the west.

The principal host rock is the Bluebell dolomite of Ordovician to Devonian age. The main ore zone starts in steeply dipping to vertical beds of the Bluebell dolomite at the Mammoth mine on the south. In its northerly course through the district the ore zone chiefly follows the steep beds, but in the central part of the Chief mine it enters the trough area of the syncline. In the gently dipping beds of the synclinal trough it plunges slightly steeper than the pitch of the syncline, thereby passing through the full thickness of the

Victoria and Bluebell formations, reaching the base of the Bluebell in the northern part of the mine near the point of its intersection with the east-northeast-trending Leadville fault. The South-dipping Leadville fault is a reverse fault which lowers the north block the full thickness of the Bluebell formation (approximately 800 feet). The ore shoot passes through the fault with little or no displacement and continues its northerly course high in the Bluebell dolomite (fig. 4).

The ore bodies are lead-zinc-gold-silver replacement-type deposits in dolomite. They are localized along bedding faults, tear faults, rolls, and bedded breccias. The mineralizing solutions apparently followed bedding-plane faults, and northeasterly trending strike slip faults. Ground preparation resulted in the development of pipelike deposits on faults. High-grade masses or pods of ore are commonly encased in envelopes of jasperoid, which form low-grade ore in the lower parts of the mine. Replacement of the jasperoid or dolomite by sphalerite and galena is extensive in the central part of the ore shoots, but some ore bodies have been mined that are virtually uniform in grade throughout. Silver is nearly always present in the ore, and some ore shoots are occasionally encountered which contain much native silver and argentite.

Ground water was encountered approximately 30 feet below the 1,800-foot level, and has presented an increasingly more difficult problem as greater depth is attained. Water was pumped to the surface until 1921. In 1921 a natural cavern was encountered on the 1,600-foot level and an attempt to discharge into this cavern was made. The successful

use of the cavern for water disposal made mining at greater depth possible. By 1950 mining had progressed to the 2,700-foot level, and the block of ground south of the Leadville fault had been drained to this elevation. Below the 1,600 level this structure is occupied by an argillized latite dike 1 to 3 feet thick which has the peculiar effect of damming the waters of the footwall block of the fault from the unwatered, mined-out area of the hanging wall block. In order to mine the ore zone north of the dike between the 2,450 and 2,700 levels and at greater depths, in both blocks of the Leadville fault, it became necessary to improve the pumping facilities of the mine. The flow of water increases temporarily as each successively lower level is opened. After the block of ground is drained, the flow subsides to normal and remains relatively constant irrespective of depth. This condition prevails north of the Leadville dike.

ORE RESERVES

It has been estimated by company engineers that with each 100 feet of vertical depth to the 2,200-foot level the ore bodies of the Chief No. 1 mine have produced 120,000 tons of ore. It is believed that this condition also will prevail below the 2,200-foot level. The company shipped a total of 155,221 tons of ore between September 1951 and September 1955. The bulk of this ore was mined from the 2,700- and 2,800-foot levels, with minor amounts from the 2,600- and 2,500-foot levels. It is believed that approximately 65 percent of the ore on the 2,800-foot level and 80 percent of the ore on the 2,700-foot level has been mined.

The practice of blocking out ore reserves in advance of mining has not been successfully followed at the Chief No. 1 mine. Therefore, ore reserves may be only roughly estimated on the basis of the above information. Company officials reported that the ore encountered on the 2,900-foot level is of equal strength and intensity to that encountered in other areas of the mine. However, a condition was noted on this level which adversely affects economic mining. The "eye bed" which forms the hanging wall of most of the ore bodies is a brittle, highly fractured dolomite unit that tends to cave and dilute the ore, thus substantially lowering the grade and increasing the lime content. This condition, which may be local to the particular area encountered on the 2,900-foot level, probably contributed to the decision to abandon the lower levels. The open-stope mining method is used exclusively. The ore is not sufficiently high grade to absorb the additional cost of timbering.

Based on the above information, it is estimated that the following tonnages of indicated and inferred ores remain in the mine below water level:

Block, level	Total estimated ore in block, tons	Indicated ore, tons, 50 percent	Inferred ore, tons, 50 percent
2,700 - 2,600	120,000 less 80 percent mined	12,000	12,000
2,800 - 2,700	120,000 less 65 percent mined	21,000	21,000
2,900 - 2,800	120,000	60,000	60,000
2,950 - 2,900	60,000	30,000	30,000
3,000 - 2,950	60,000	------	60,000
3,100 - 3,000	120,000	------	120,000
Total	600,000	123,000	323,000

Tabulations prepared by company engineers, showing production by channels (sub-zones within the main ore zone or "run"), and average assays for designated periods and lower level intervals, are shown in Appendix I.

A weighted average of lead-zinc ore shipments from the lower levels for the first 7 months of 1955 was calculated to indicate the grade of the above-estimated tonnages. A total of 55,882.3 dry tons of ore was shipped. A weighted average for these shipments is as follows:

	Percent		Ounces	
	Pb	Zn	Ag	Au
600,000 T =	5.785	7.122	5.266	0.023
675,000 T —	5.5	6.8	5.1	0.02

EXPENDITURES

The total expenditure allowable under the original contract was $463,420. Additional contract specifications were approved under the first and second amended contracts, raising the amount to $518,040.71.

A total of $327,218.21 was expended under the original and first amended contracts. Under the second amended contract the cost of the uncompleted work outlined in the original contract, plus the cost of added work, amounted to $190,822.50.

Audit of the project accounts has disclosed that expenditures for all completed work total $386,900.39. Settlement for part of the jointly held equipment and supplies has been made, but many items remain on the property. Property settlement has not been completed and is therefore not considered in this report.

The Government's share of the total expenditure is $184,443.81. A total of $131,140.32 remains unexpended. The Government's share of this amount is $65,570.16.

A total of 155,221.914 dry tons of ore was produced and sold through July 10, 1956. The value of this production is $2,638,328.74, which reflects the smelter settlement after deduction of freight. A total of $127,035.90 has been paid in royalties to DMEA through July 10, 1956, in accordance with the third Royalty Audit Certificate dated August 16, 1956. No production has been reported since that date.

Foley Electric Co. and Centennial Development Co. were subcontractors on installation of electrical and pumping facilities. Centennial Development Co. subcontracted the work under Projects 1 and 1A.

The second interim Audit Certificate dated January 23, 1957, allowed the following total costs:

Project 1 ----------	$305,208.83
Project 1A ----------	36,025.56
Shaft sinking ----------	45,666.00
Allowed total cost ----------	$386,900.39

CONCLUSIONS AND RECOMMENDATIONS

Exploration completed under contract with Chief Consolidated Mining Co. resulted in discovery of lead-zinc ores on the 2,700-, 2,800-, and 2,900-foot levels, through the 18/411 winze. A Certificate of Discovery or Development was issued February 17, 1956. The company mined ores throughout the period of contract operation and has paid royalties to the Government totaling $127,035.90.

Lead-zinc ores in the Chief property occur principally as replacement of the Bluebell dolomite of Ordovician to Devonian age. The main ore zone, explored on and below the 2,700-foot level of the Chief mine, starts at the Mammoth mine about 1-1/4 miles south of the Chief No. 1 shaft. In the Chief mine the ore zone plunges slightly steeper than the pitch of the prominent syncline in the area and passes through the full vertical thickness of the Victoria and Bluebell formations. The base of the Bluebell formation is found near the point of intersection of the ore zone with the northeast-trending Leadville fault. This south-dipping structure is a reverse fault which has lowered the footwall block approximately 800 feet. The ore shoot passes through the fault with little displacement and is found near the top of the Bluebell dolomite on the north side of the structure. Operations at the Chief mine traditionally have been conducted without definite delineation of ore bodies prior

to mining. Company engineers have estimated that with each 100 feet of vertical depth to the 2,200-foot level, the main ore zone has produced 120,000 tons of ore. It is believed that estimates of inferred ore below the 2,600 level can be made using this same factor. Estimated indicated and inferred ore reserves between the 2,600- and 3,100-foot levels total 446,000 tons.

Work accomplished under contract has demonstrated that the main ore zone is continuing strongly at the 2,900-foot level. All workings below the 1,800-foot level are now flooded following the company's decision to terminate operations as of September 1955. Additional exploration on the property, with Government participation, is not recommended.

Footnotes on following page

APPENDIX 1 (Cont'd.)

Tabulation Showing Channel Production and Grade of Deep Workings for use in Estimating Future Ore

(a) The figures shown actually represent the number of mine cars. The average mine car load weight is approximately 1.1 wet tons, thus the number of dry tons of ore would vary slightly from the tabulated figure.

(b) Parentheses around tons per vertical foot figures indicate channel is still being mined, or, as in the case of line 12, channel continuation has not been blocked out below this depth.

(c) Average channel assay determinations are derived by weighting the monthly production and the monthly hand samples average for all stopes which contribute to the total channel tonnage shown.

(d) Settlement assays and tonnages are not available for individual stopes as channel ores are mined in shipment.

(e) Lines (30), (31) and (32) are beyond the producing period covered by this tabulation and have been included only because they show a marked increase in the tons per vertical foot in depth.

Memorandum for the Files

From: Director, Division of Base Metals

Subject: Phone conversation with Mr. Mittendorf and Mr. W. W. Watson of the Chief Consolidated Mining Company about Docket No. DMEA-1 & 1A, Chief No. 1 Mine, Juab and Utah Counties, Utah, Second Amended Contract No. Idm-E4

The telegram dated March 4, 1958, to Mr. W. W. Watson is with reference to a phone conversation of that date between Mr. Watson and Mr. C. O. Mittendorf.

Mr. Watson stated that 44,000 feet of 2/0 - 37 strand cable was on hand. That he could sell 6,000 feet of this for twenty cents per foot and perhaps sell more. Original cost had been 51 cents but copper prices are down at the moment and the insulation was rather inferior.

Mr. Watson also requested permission to reduce his asking prices from 60% to 45% of new cost. Also he inquired about credit selling.

-WRH
DMEA-141A

Excerpt from Mr. Mittendorf's diary, 3/4/58:

Watson, of Chief Con, phoned from Salt Lake City to tell me of an offer he had received for 6000 ft. of 2/0 37-strand cable. It cost us 51¢ a foot and the bid is 20¢. The bid comes from a Los Angeles outfit who might buy the remainder of the 44,000 feet which was purchased under the contract.

Watson went on to say that he felt the offer was a good one because the price of copper had decreased substantially since this cable was purchased, and also that the insulation on it is not in too good shape. He pointed out that this cable was a Korean War product and could not compare in quality with cable manufactured today.

I thought we should accept the bid, but I wanted to clear with Chambers first, and I promised to send him a telegram later in the day.

He asked if I would consider changing our blanket authorization to him so he could sell anything for 45 percent of the cost price rather than 60 per cent under the present authorization. I told him we would consider that item also.

He then wondered if I would entertain any proposals to sell some of this jointly owned equipment on terms. He felt that he could dispose of some of it provided it did not require a full cash payment. He did not, however, want to take the full responsibility for collection; nor did he want to run the risk of the Government holding him responsible for the payment of the creditors' accounts. I said we would take up that matter too.

We got out a telegram before the close of the day authorizing the sale of the cable at 20¢ a foot. We also lowered the depreciation percentage from 60 to 45 percent.

~~Regarding the credit item, we authorized him to sell on time anything that cost less than $1000 if he deemed that the credit risk was reasonable. Anything that cost over $1000 should be referred to Washington.~~

Memorandum

To: Chairman, Operating Committee, DMEA

From: Executive Officer, DMEA Field Team, Region III

Subject: Semiannual Reports on Terminated Certified Projects in Region III Prior to Final Settlement

Your office may expect to receive a semiannual report for period January 1, 1957 through June 30, 1957, and semiannually thereafter on the following projects:

CONTRACT	OPERATOR
E-4	Chief Consolidated Mining Company
E-15	Lead Carbonate Mines, Inc.
E-649	Camoose Uranium Mines of America
E-879	Uranium King Corporation
E-963	Vitro Minerals Corporation

The listed projects are added to those previously requiring a semiannual report in view of your decision concerning such reports for certified projects covered by Docket Nos. DMEA-1 & 1A and DMEA-434.

Re: Semi-Annual Reports on Certified Projects for Docket Nos. DMEA-1 & 1A, DMEA-434 and DMEA-1297

Dear Mr. King:

We have your memorandum of February 3, 1958, covering semi-annual reports on various projects. You are correct that the East Ridge project (DMEA-1297) should be considered as active, though in recess until August 15, 1958.

However, the Chief Consolidated Mining Company (DMEA-1 and 1A) and the Lead Carbonate Mines, Inc. (DMEA-434) projects are not to be considered as "still active and in force", though details of final settlement may still lag for a protracted period.

We are meeting with increasing demands for summations of the results of the DMEA program and it is necessary that our data be as complete and as up to date as possible. Kindly let us have the reports on the latter two as soon as convenient.

Sincerely yours,

George C. Selfridge

Memorandum

To: Chairman Operating Committee, DMEA

From: Executive Officer, DMEA Field Team, Region III

Subject: Semi-Annual Reports on Certified Projects, your memorandum January 24, 1958.

Reference is made to your memorandum of January 24, 1958 regarding semi-annual reports on the following certified projects:

Docket No. DMEA-1 & 1A	Chief Consolidated Mining Co.
Docket No. DMEA-434	Lead Carbonate Mines, Inc.
Docket No. DMEA-1297	East Ridge Mining Company

Docket DMEA-1297, Contract Idm-E39, East Ridge Mining Company, is in operation, although in recess during the period of severe winter weather conditions at the high altitude.

The final settlement of Lead Carbonate Mines, Inc., Docket DMEA-434, Contract Idm-E15, has not been made due to the inability to make the final measurement. Access to the mine will not be possible until sometime late next spring.

The final settlement of Chief Consolidated Mining Company, Docket DMEA-1 and 1A, Contract Idm-E4, has not been made in connection with jointly-owned equipment.

Under these conditions, this office considers the above contracts to be in force, even though termination agreements have been executed for Contract Idm-E15, Lead Carbonate Mines, Inc., and Contract Idm-E4, Chief Consolidated Mining Company.

According to our interpretation of the "Special Note," at the conclusion of Memorandum No. 29, semi-annual reports are not required in connection with contracts in force.

Re: Docket No. DMEA-1 & 1A (Lead-Zinc)
Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract No. Idm-84

Dear Mr. King:

We have your memorandum of December 26, with enclosures, relative to the cited account. It is out of the question for us to waive settlement of the Government's equity in this jointly-owned equipment; we would have no proper justification for such action.

We therefore must continue to carry this as an open account, and we trust that, little by little, liquidation will be effected.

Sincerely yours,

George C. Selfridge
Chairman, Operating Committee (GCS)

Memorandum

To: Chairman, Operating Committee, DMEA

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 1 and 1A (Lead-Zinc) Second Amended Contract Idm-E4, Chief Consolidated Mining Co., (Chief No. 1 mine) Juab and Utah Counties, Utah

In reference to your letter of December 11, 1957, enclosed are the original and one copy of a memorandum dated December 23, 1957, from M. H. Howes, Mining Engineer, Bureau of Mines, relative to activities at the subject property.

Due to existing circumstances we see no way to expedite liquidation of the Government's interest in the balance of the jointly owned property acquired under the contract. Apparently the Operator has made exhaustive attempts to dispose of the property as provided for in the contract.

If it is your decision to close the account at an early date, we recommend that the liquidation procedures as provided for in the contract be waived, leaving the costs of the jointly owned property as a cost to the project; and if the Company is willing to participate in the execution of the necessary instrument, increase the maximum period for royalty payments and lien for payment thereof to 20 years from the date of the contract.

December 23, 1957

Memorandum

To: W. H. King, Executive Officer, DMEA Field Team, Region III

From: M. H. Howes

Subject: Docket No. DMEA 1 and 1A (Lead-zinc), Second Amended Contract No. Idm-E4, Chief Consolidated Mining Co. (Chief No. 1 mine), Juab and Utah Counties, Utah

Referring to your memorandum of December 16, 1957, the operations at the Chief No. 1 mine have been completely shut down since June 1957. Mr. Watson, vice president of the company, reports that considerable effort has been made to dispose of jointly owned property acquired under the contract, at a fair price. He claims that lists of the equipment have been sent to all of the used-equipment dealers in Salt Lake City, and to several dealers on the Pacific Coast and in Arizona. He also stated that lists of equipment have been sent to over 50 operating mines in the Western United States. All equipment on the list is available at the mine for inspection. Response to this advertising has been very disappointing. However, a few inquiries have been made and a small amount of the jointly owned equipment has been sold.

Much of the mining industry is in a very unhealthy state at present, and the outlook for improvement is not good. Because of the present uranium activity in the Ambrosia Lake area in New Mexico, some of the jointly owned pumping and electrical equipment may be sold.

If rapid liquidation of the Government's claim is deemed desirable, I suggest that the company's equipment debt to the Government be cancelled, and in lieu thereof to extend the contract repayment period from 15 years to 20 years.

Chief Consolidated Mining Company
Chief No. 1 Mine
Juab and Utah Counties, Utah
Second Amended Contract No. Idm-E4

Dear Mr. Harshman:

We have heard nothing regarding the cited account since receiving our copy of your August 27 letter to the Operator. Since this is a large account and has been pending for a considerable period, we are naturally desirous of obtaining a progressive realization of the Government's equity.

We are fully cognizant of the fact that certain segments of the mining industry are in a depressed condition, and it may be difficult to make sales of second-hand equipment at this time. Nevertheless, we would appreciate a word from you as to the present status of the operations of this company, and your suggestions toward effecting a more rapid liquidation of the Government's claim.

Sincerely yours,

George C. Selfridge

Re: Docket DMEA-1 & 1A (Lead-Zinc)
Second Amended Contract Idm-E4

Dear Mr. Harshman:

We recently sold as junk to Frank O'Brien's Metal Salvage in Provo, Utah, 2 Pump Casings which were worn out during our operations under the above captioned contract; the sale of which was authorized by Mr. C. O. Mittendorf in his letter addressed to me of July 10, 1957.

We received $38.70 for the two cases; the Government's interest amounts to 50%, or $19.35 for which we enclose our check.

The two pump casings referred to were used in connection with the 8x10x14 Byron-Jackson Centrifugal Pump. Will you kindly correct your inventory of equipment jointly owned to give effect to this sale.

Yours very truly

Re: Docket DMEA-1 & 1A (Lead-Zinc)
Second Amended Contract Idm-E4

Dear Mr. Mittendorf:

Reference is made to two Byron-Jackson 8x10x14 DVS Split Case Centrifugal Pump Cases which are part of the jointly owned equipment under the terms of the above captioned contract.

These two pumps were completely worn out and replaced with new pumps purchased from our own funds without Government participation while the contract was in operation.

Pumps? Cost? 4 pieces of iron?

We consider these pumps to be junk. At the present time we are collecting all the scrap iron on our property and are selling the same to a junk dealer for $30.00 per ton. These two items will approximate a ton, and we would appreciate the Government's permission to dispose of them in this manner.

For your further information, the Chief Consolidated Mining Co. closed its operations on June 15 for an indefinite period or until such time as the metal market situation improves to a point where our operations might be conducted on a profitable basis. In the meantime, we are keeping key personnel at the mine, and are bending every effort towards disposing of the jointly owned equipment.

With kindest regards,

6028.-

Sincerely yours

W. W. Watson

Subject: Docket DMEA-1 and 1A (Lead-Zinc) Contract 7dm-[illegible],
Chief Consolidated Mining Company (Chief No. 1 mine),
Utah and Juab Counties, Utah

Enclosed is a check from the subject Operator in the amount of $388.50, payable to Defense Minerals Exploration Administration, as liquidation of the Government's interest in a jointly-owned Bucyrus Erie Hydromucker which was acquired under the contract.

Also enclosed is a letter of transmittal dated April 2, 1957, from the Operator to the Acting Executive Officer, DMEA Field Team, Region III, and a copy of a letter dated March 29, 1957, from the Administrator, DMEA, to the Operator, whereby the Government accepted the Operator's offer to purchase the Hydromucker for $1554.00. The Government's interest in this item is 25 percent, or $388.50, the amount remitted.

The amount of $388.50 is to be credited to voucher payments.

Re: Docket No. DMEA-1 & 1A (Lead-Zinc)
Second Amended Contract No. Idm-E4

Dear Sir:

In a letter received from Mr. C. O. Mittendorf, dated March 29, 1957, he accepted, on behalf of the Government, our offer to purchase one Bucyrus Erie Hydromucker which is part of the equipment, in which the Government has an interest under the terms of the above captioned contract, for the sum of $1554.00 The original cost of this equipment was $2,590.00, and the Government's advance was 25% of the original cost.

The Government's interest, therefore, being limited to 25% of the selling price, we enclose herewith our check in the amount of $388.50 in full payment thereof.

Yours very truly
