Memorandum

To: T. A. Christensen

From: Executive Officer, OME Field Team, Region III

Subject: Docket No. DMEA 4047 (Uranium) Contract Idm-E943, Charles N. Coleman & Associates, (Clyde, Marsh, and Longport groups of claims) Fremont County, Wyoming - FINAL PAYMENT

Reference is made to our memorandum of September 4, 1958, whereby we forwarded the final Form MF-104, Operator's Monthly Report and Voucher, for June 1958, and requested that you withhold an amount of $500.00 pending resolution of matters prerequisite to closing the account.

The Operator's final report has been received, therefore, final payment to the Operator is to be made on the following basis, which is in conformance with the Report of Review of reported project costs by the Contract Administration and Audit Division, OME, dated November 10, 1958.

Basis for Final Payment

Total accepted cost		$20,290.22
Government participation:		
75 percent of $14,632.50	$10,974.37	
50 percent of $5,657.72	2,828.86	
Total		13,803.23
Total prior payments		13,303.23
Balance due the Operator		$ 500.00

Administrative Audit Difference Statement

Date: September 9, 1958
Payee's Reference: June 1958

DMEA 4047

Charles M. Coleman and Associates
139 North Clark St.
Chicago 2, Illinois

Gentlemen:

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

OFFICIAL FILE COPY
DMEA
RECEIVED SEP 15 1958

DATE	INITIALS	CODE
9/15	C	220
"	Knowe	~~770~~ 700

Amount Claimed $ 5,783.62

Difference $ 125.90

Amount Approved $ 5,657.72

The reason for the difference was due to:

Disallowances

Drilling: Operator reports 4736 feet of drilling.
Drilling logs show 4716 feet of drilling.

Disallowed reported cost of 20 feet of drilling at $0.95 per foot ---------- $19.00

Disallowed Incidental Allowance for 20 feet of drilling at $0.22 per foot ------- 4.40

Disallowed Standby Time erroneously reported with drilling costs ---------- 90.00

(CONTINUED ON ATTACHED SHEET.)

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N. E. Stokes
Audit Section

R-III-B & F Form No. 4
4-15-52 D

Bulldozer: Operator reports 5 hours bulldozer time at $12.50 per hour; however, the invoice indicates that 4 hours of bulldozing were performed at $17.50 per hour. Four hours of bulldozer time at $12.50 per hour is allowable.

Disallowed 1 hour of bulldozer time at $12.50 per hour ----------	$12.50
Total amount disallowed	$125.90

Reinstated the amount of $500.00 which was withheld in processing the August 1957 voucher.

Withheld an amount of $500.00 pending performance of additional work; or, if additional work is not approved by the Government and performed by the Operator, continue to withhold the amount of $500.00 pending resolution of matters prerequisite to closing the account.

224 New Customhouse
Denver 2, Colorado
September 4, 1958

Memorandum

To: T. A. Christensen

From: Alternate Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 4047 (Uranium) Contract No. IAm-8943 Charles M. Coleman and Associates (Clyde, Marsh, and Longpert claims group) Fremont County, Wyoming - Progress Report for June 1958

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

The work is being performed partly under independent subcontract, and partly at fixed unit costs. The drilling rates are as low or lower than the rates contained in the lowest and best bid submitted with the application.

The estimated units of Standby Time for Stage V have been exceeded. However, neither the unit cost for Standby Time nor the total cost for the category has been exceeded, therefore, the reported cost for Standby Time under Stage V is allowable. The examining engineer verbally concurred in the matter September 4, 1958.

Except as otherwise indicated below we consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended on the following basis contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Disallowances

Drilling: Operator reports 4736 feet of drilling.
Drilling Logs show 4716 feet of drilling.
Disallow reported cost of 20 feet of drilling at $0.95 per foot ---------- $ 19.00

Disallow Incidental Allowance for 20 feet of drilling at $0.22 per foot ---------- 4.40

Disallow Standby Time erroneously reported with drilling costs ---------- 90.00

Bulldozer; Operator reports 5 hours bulldozer time at $18.50 per hour; however the invoice indicates that 4 hours of bulldozing were performed at $17.50 per hour. Four hours of bulldozer time at $18.50 per hour is allowable.

Disallow 1 hour of bulldozer time at $18.50 per hour ---------- 18.50

Total amount to be disallowed ----------$125.90

Reinstate the amount of $500.00 which was withheld in processing the August 1957 voucher.

Withhold an amount of $500.00 pending performance of additional work; or, if additional work is not approved by the Government and performed by the Operator, continue to withhold the amount of $500.00 pending resolution of matters prerequisite to closing the account.

Reconciliation with Amount Reported by the Operator on Form MF-104 for June 1958

Amount reported on Form MF-104 for June 1958 ---	$5,783.62
Amount to be disallowed ----------	125.90
Acceptable cost for June 1958 ----------	$5,657.72
Government participation at 50 percent ----------	$2,828.86
Amount to be reinstated -------> $500.00	
Amount to be withheld --------- $500.00	
0.00	
Balance due the Operator ----------	$2,828.86

Remarks:

Date of report ---------- July 15, 1958
Date received in field office ------ July 22, 1958

REGION III

Building 20
Denver Federal Center
Denver 2, Colorado
Sept. 3, 1958

Memorandum

To: Alternate Acting Executive Officer, DMEA Field Team, Reg. III

From: E. O. Binyon

Subject: Docket No. DMEA 4047 (Uranium) Contract Idm-R943, Chas. M. Coleman and Associates (Clyde, Marsh, and Longport claims group) Fremont County, Wyoming -- Progress report for June 1958

An inspection of the work completed during the period was made August 6, 1958. No work was in progress and no one was at the property when visited.

The location and depths of the holes were found to be as shown on the operator's map and as reported.

Eleven holes with a total depth of 4736 feet were drilled and a minor amount of dozer work was done during the month. A check of the cuttings from each hole with a counter gave considerably less count than reported, probably due to drilling with mud. The check was of no value. The logs were checked and only one hole -- Hole No. 2 -- had any appreciable count. The mineralization in this hole was from 166 to 180 feet and the 14 feet averaged .07 percent eU_3O_8. The operator shows 0.098 percent for 6 feet in this hole (172-178 feet). This however is incorrect. The log shows approximately 0.09 percent eU_3O_8 for a thickness of 1.25 feet (176.25-177.5).

Although the operator reported 4736 feet drilled and this footage is documented by the driller's invoice, the lithologic logs show a total footage of only 4716 feet. This is the footage allowed for payment and the amount for drilling should be $4480.20. The amount claimed for Incidental allowances is reduced to $1037.52 (4716 x $0.22), the amount allowed for payment. The MF-104 and 104A forms were checked and found to be in error. A tabulation of the amounts claimed and the amounts allowed for payment follows:

	Amount Claimed	Allowed for payment
Drilling 4736 feet at $0.95, including $90.00 for standby time (error)	4589.20	
Drilling 4716 feet at $0.95		4480.20
Bulldozer time 4 hrs. at $17.50, but claimed 5 hrs. at $12.50	62.50	
Bulldozer time 4 hrs. at $12.50		50.00
Standby time 9 hrs. at $10/hr. (also included with drilling amount)	90.00	
Standby time 5 hrs. at $10/hr.		50.00
Fixed Cost		
Incidental Allowances 4736 ft. at $0.22	1041.92	
Incidental Allowances 4716 ft. at $0.22		1037.52
Totals	$5783.62	$5617.72

The documentation for the bulldozer time shows only 4 hours, therefore, only 4 hours at the contract rate of $12.50/hr. are allowed. It is recommended that the operator be paid $2808.86 or the Government's share at 50 percent of $5617.72, the amount allowed for payment.

Inasmuch as the operator is to drill only 600 feet under Stage VI as offset drilling and this will probably be all the drilling that will be approved, it is suggested that $500.00 or at least a part of this amount be withheld pending completion of the 600 ft. and receipt of the final report. A copy of the map, logs and lithologic logs have been retained in this office. The contract expires Sept. 1, 1958.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

or $50.00 for a total of $5681.12

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

REPORT ON WORK ACCOMPLISHED UNDER STAGE V
EXPLORATION PROJECT CONTRACT
CHARLES M. COLEMAN, ET. AL.
DOCKET NO. DMEA-4047
CONTRACT NO. Idm-E 1133

INTRODUCTION

All drilling under Stage V of the above named contract was completed on June 30, 1958. The drilling was restricted to the Clyde claim group located in Sections 22 and 23, T32N, R91W, and was as per instructed in Amendment No. 5 and No. 6 of the above named contract. Eleven rotary non-core holes were drilled totaling 4,736 feet or 1,314 feet less than the maximum allowed by the DMEA offices.

EXPLORATION DRILLING

Drilling under Stage V was started on June 13, 1958 with one Failing and one Mayhew drill. Samples were collected and stored from both air and water circulated mediums.

Drill hole locations were surveyed and are plotted on the accompanying map with reference to Government subdivisions and the Clyde claim survey. Accompanying plan map shows the location and designation of holes drilled.

Samples were logged lithologically and checked for radioactivity with a Model 111B Scintillation Counter. Samples were collected and saved. However, no samples were taken for chemical assays because all Stage V drill holes were drilled with heavy mud.

All holes were probed by Century Geophysical Corporation, Uranium Division, Grand Junction, Colorado. Probe records accompanying this report show Gamma, and resistivity curves. The accompanying chart of drill hole depths also gives information on mineralization encountered. The proper method of interpreting the %eU_3O_8 from the Century gamma logs is as follows:

1. Establish background count.
2. Take note of sand-shale horizons to select proper interval of anomalous thickness.

3. a) Using a planimeter:

$$\frac{2 \times \text{area} \times \text{scale (250 cps)}}{\text{Thickness}} = \text{Ave. cps}$$

b) Using engineers scale:

Average cps each 1' interval of anomaly then total average cps for anomaly and divide by total thickness = Ave. cps.

The above steps give average cps for the anomalus thickness. This average cps should be related to the attached correlation curve found very accurate in the Gas Hills area. The curve is related to dry holes. The Clyde claims were drilled with mud of approximately 70 lb. density. Hole size of 4½ inches and 70 lb. mud will decrease the cps 20%. Therefore, average cps x 120% = cps for interpretation on correlation curves.

Hole No.	Total Depth	Elevation	Mineralization Footage	Mineralization Counts per second
1	390	6630	109-115	38
2	360	6660	168-184 172-178 332-337 341-349	170 248 30 51
3	390	6680	220-245	15
4	390	6690	120-136	30
5	530	6750		
6	600	6740		
7	450	6630	106-110 115-118	77
8	360	6630		
9	400	6660		
10	360	6560		
11	506	6570	182-185	18

GEOLOGY AND MINERALIZATION

The Stage V drilling confirmed the presence of significant, wide spread mineralization. Such mineralization is confined to two zones, as indicated by hole No. 2 on the east end of the Clyde claim No. 10. The upper mineralized zone is in a well developed sandstone as indicated on the resistivity log of hole No. 2. This sandstone horizon is also mineralized in hole No's. 4, 7 and 8.

The sandstone without mineralization is apparent in holes 1 and 10, it is slightly developed with a shale parting in hole No. 5.

The Century Geophysical Corporation logs make for easy interpretation when sets of logs forming a cross section are viewed as such. The following cross sections should be observed as looking east (northern most hole on the left) and with the hole depths all adjusted to a horizontal plane with Hole No. 1 as the datum at 20 feet of depth.

Cross Section	Hole No.	Depth Equal to Datum of 20' on Hole No. 1
1	1	100'
	2	58'
	3	84'
2	4	55'
	5	98'
	6	77'
3	7	41'
	8	65'
	9	73'
4	10	57'
	11	64'

Drill centers are too distant to allow close interpretation of the structure, but apparently some generalizations can be made as to fault structure from the common datum listed above and elevations as listed.

1. A fault, trending north-south between holes No. 1, 2, 3 and 4, 5, 6, the east side is down thrown.

2. A fault, trending north-south between holes No. 7, 8, 9 and 10, 11; or a misinterpretation of the mineralized sandstone zone, thought to be easily followed on resistivity logs.

Ore grade material was found in hole No. 2 and significant mineralization in holes No. 4 and 7. Using the Century Geophysical Corporation's "Gas Hills" correlation curve, and allowing for mud cake and hole size as suggested by Century Geophysical Corporation, the following is the equivalent uranium assay

for Hole No. 2.

168' to 184'	16'=.08% eU_3O_8
172' to 178'	6'=.12% eU_3O_8

To date deep drilling on the Clyde claim group has been successful and additional work will be requested under terms of the contract.

Respectfully Submitted,

Robert Todd

Administrative Audit Difference Statement

Charles M. Coleman & Associates
119 N. Clark Street
Chicago 2, Illinois

Date: October 22, 1957
Payee's Reference: August 1957

Gentlemen:

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed $ 3,139.60

Difference $

Amount Approved $ 3,139.60

The reason for the difference was due to:

Withhold: $500.00 pending resolution of matters prerequisite to closing the account.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

RRC

To: H. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4047 (Uranium) Contract Idm-1943, Charles M. Coleman and Associates (Clyde, Marsh and Longport claim groups) Fremont County, Wyoming - Operator's Monthly Progress Report for the month of August, 1957 (Includes July, 1957 progress)

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended for 75 percent of the amount reported on Form MF-104 for August, 1957, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations, except for the following deduction:

Withhold an amount of $500.00 pending resolution of matters prerequisite to closing the account. All currently approved Stage IV drilling has been completed, and the Operator has requested that the contract be terminated in its present status.

Remarks:

Date of Report----------September 7, 1957

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III

From: E. O. Binyon

Subject: Docket DMEA 4047 (Uranium) Contract Idm-E943, Charles M. Coleman and Associates (Clyde, Marsh and Longport claims groups) Fremont County, Wyoming -- Progress report for August 1957

The property was visited on July 24 and again on September 4, 1957. No work was in progress on either visit, however, the progress and completed work was discussed with the company's geologist. On the first inspection the geologist stated that the drilling had been suspended temporarily after the completion of 5 of the 12 holes approved for Stage IV. On the second inspection, he reported that all of Stage III drilling had been completed. In both instances, a field check was made of the holes reported drilled.

As reported, 12 holes with a total footage of 2980 feet were drilled during July and August 1957. The holes were located and drilled to the depths as shown on the map accompanying the operator's report. Hole data is given below:

Claim	Hole No.	Depth Ft.	Depth of approx. ore grade mineralization	Probe U_3O_8	Depth Mineralized From To	Aver. Grade
Longport 1	3N	265	238-239	.102	237-244	.076
			241	.11		
			(238-241 = .094)			
Longport 1	3S	265	260.5-261	.16	259-262	.091
			260-262	.135		
Longport 1	3E	265	238-239	.097	236-240	.067
Longport 1	3W	265	252-254	.096	252-255	.084
			253	.12		
Longport 3	9N	235	212-213	.11	211-215	.088
			219-222	.129	219-222	.109
Longport 3	9S	235	-	-	-	-
Longport 3	9E	235	-	-	228-229	.07
Longport 3	9W	235	215.5-216	.08	215.5-216.5	.065
			223-225	.128	220-227	.148
			(220-227 = .148)			
Longport 5	13N	245	232-233	.152	228-229	.05
Longport 5	13S	245	-	-	-	-
Longport 5	13E	245	-	-	238-239	.04
Longport 5	13W	245	225-227	.221	224-228	.194
			(224-228 = .194)			

A check of the cuttings from holes 3N, E, S and W gave a reading between .05 and .08 percent eU_3O_8, holes 9N and 9W read .06 and about .10 percent eU_3O_8 respectively, and holes 13N and 13W both showed about .08 percent eU_3O_8.

The MF-104 and 104A forms except for an arithmetic error of $10.00 in the drilling cost under "Totals Previously Reported" were found to be correct. The drilling cost under Totals Previously Reported should be $7,100.00 and the amount under Totals to Date $9,484.00, thereby making the totals under each heading 11,492.90 and 14,632.50 respectively.

The work was done in conformance with the terms of the contract and is properly documented. It is recommended that the operator be paid $2,354.70, the Government's share at 75% participation of $3,139.60 the total amount claimed.

Only 4 copies of the MF-104A forms were received in this office.

Signature E. M. Hardman Title acting Executive Officer Date OCT 21 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Date Sept. 7, 1957 Operator Charles M. Coleman and Associates

Per Albert W. Dellwig Title Attorney-in-Fact

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Remarks: * 90 hours @ $1.75 plus 75 hours time over 40 hours per week @ 2.625
** $1.75 per hour plus time and one-half rate over 40 hours per week (maximum $325.00 for Stage II)

(For Government use only)

Orig. copy also contained with orig. of report

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

U. S. DEPARTMENT OF THE INTERIOR
BUREAU OF MINES
REGION III

Administrative Audit Difference Statement

Charles H. Coleman & Associates
139 N. Clark Street
Chicago 2, Illinois

Date: June 25, 1957
Payee's Reference: May 1957

DMEA-4047

Gentlemen:

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed	$	3,003.00
Difference	$	45.00
Amount Approved	$	2,958.00

The reason for the difference was due to:

Disallowance:

Claimed Incidental allowance for 2900 ft at a total cost of - $683.00

Acceptable cost, 2900 ft @ .22 per ft.- $638.00

Amount to be disallowed $ 45.00

Reinstate: $100.00 which was withheld from the October 1956 voucher.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N. E. Stokes
Audit Section

June 21, 1957

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket-4047, (Uranium) Contract Idm-E943, Charles M. Coleman and Associates (Clyde, Marsh and Longport claims), Fremont County, Wyoming - Operator's Monthly Progress Report for the month of May, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

Except as otherwise indicated below, we consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended on the following basis, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Due to an arithmetical error, the Operator has reported excess cost under "Incidental Allowance" for the reported 2900 feet of drilling. The excess cost is to be disallowed as follows.

<u>Disallowance</u>

Amount reported, Incidental Allowance for 2900 feet at total cost of	$ 683.00
Acceptable cost, 2900 feet at $0.22 per foot	638.00
Amount to be disallowed	$ 45.00

<u>Reinstate</u> the amount of $400.00, which was withheld from the October 1956, voucher.

Reconciliation with Amount Reported by the Operator on Form MF-104 for May, 1957

Amount Reported on Form MF-104 for May, 1957	$3,003.00
Amount to be disallowed	45.00
Total accepted cost for May, 1957	$2,958.00
Government Participation at 75 percent	$2,218.50
Amount to be reinstated	400.00
Balance due the Operator	$2,618.50

Note: The engineer's report recommends withholding an amount of $400.00 pending performance of additional work. It has now been determined that the balance of Stage III work has been completed, therefore any necessary amount can be withheld from the next or any subsequent voucher submitted by the Operator.

Remarks:

Date of Report	June 5, 1957
Date Received in Field Office	June 10, 1957
Date Received in Region Office	June 21, 1957

REGION III

Memorandum

To: Executive Officer, DMEA field Team, Region III

From: R. O. Minyen

Subject: Docket DMEA 4047 (Uranium) Contract Idm-E943, Charles M. Coleman and Associates, (Clyde, Marsh and Longport claim groups) Fremont County, Wyoming--Progress report for May, 1957.

An inspection of the drilling completed was made June 18, 1957. There was no one at the property when the inspection was made, however, the work of the project was discussed with Robert Ford, geologist for the operator.

The eight holes - Hole Nos. 1, 2, 3, 4, 5, 6, 11, and 12 were checked and found to be drilled to the depths reported, a total aggregate footage of 2,900 feet. Hole No. 5 on the Longport No. 2 claim was drilled to 420 feet but only 400 feet is claimed for payment. All holes with the exception of Hole Nos. 6 and 12 are located as shown on the operator's map. Hole No. 6 and 12 are 150 feet from the south end lines of the Longport 2 and 4 claims and one incorrectly shown on the map. The distance from the claim boundaries is within the terms of the contract.

A check with a geiger counter of the cuttings from the holes indicated some mineralization of ore (.10%) or near ore grade in holes 3, 11, and 12, the count being lower than the reported probe results. It might be stated that the counter readings of the cuttings is unreliable. Readings slightly above background were obtained of cuttings from holes 2 and 6. From the probe results ore grade material was found in 3 holes. The grade ranging from .107 percent eU_3O_8 in Hole 11 over a thickness of 1.5 feet to 1/2 feet of .185 percent eU_3O_8 in Hole 3. Hole 12 had 3 feet of .111 percent material. The depths at which the ore was encountered are; 251.5-252 in Hole 3, 301.5-303 in Hole 11 and 306.5-309.5 in Hole 12.

The MF-104 and MF-104A were checked and are found to be in error in the Amount Claimed for Incidental Allowances. The operator has claimed $683.00 or $45.00 more than the correct amount of $638.00 ($.22 x 2,900 feet). The correct totals under "Monthly Total" on the MF-104 and "Cost this Month" on the MF-104A should be $2,958.00 and the total expenditures under "Totals to Date" and "Costs to Date" should be $9,728.00.

This error was mentioned to Mr. Ford and he stated he had informed the Denver office of the mistake.

Documentation of the drilling cost are included with the report and it is recommended that the operator be paid $2,218.50 or 75 percent of the corrected total expenditures of $2,958.00. It is further recommended that $400.00 be withheld pending completion of the project and receipt of a final report.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. DM E 943 in accordance with the terms of the contract.

Signature E O Bunyon (#221850) Title Mining Engineer Date June 20, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W H King Title Executive Officer Date JUN 21 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Contract No. Idm-8-943
Docket No. DMEA-4047
Charles M. Coleman and Associates

Progress Report for Period Ending May 31, 1957

Drilling under Amendment No. 3 of the above named contract, Stage III started on Monday, May 20, 1957. Of the sixteen (16) DMEA authorized holes consisting of 4,620 feet, eight (8) holes totaling 2,900 feet, were drilled during the month of May. Drill hole logs, both lithologic and radiometric, and location of the eight (8) holes completed are included in this Progress Report. To date there has been no chemical analyses returned from the assayer.

The drilling was performed with the standard truck-mounted rotary drill using both air and water as a circulating medium in all holes. Samples were taken with a Duclone-type dust collector when drilling with air, and collected in a mud box when drilling with water. Difficulty was encountered in keeping holes numbered 4, 5, and 6 open for radiometric probing. After sufficient washing holes 4 and 6 were kept open but #5 was probed through the drill stem from 296 feet to 400 feet.

All drill holes were logged lithologically and probed for radioactivity with a model 610 Babbel Counter, using a reel-mounted probe. Meter readings of the Babbel Counter are taken as direct 4th scale readings. Correct interpretation has been given the readings and in the writers opinion the R. M. Log readings are the true equivalent percent uranium. Samples taken at 2'

increments were checked for radioactivity with a model 111B scintilator and collected for government inspection.

Mineralization was encountered in all holes. Significant mineralization was found in holes number 3, 6, 11, and 12. The relationship of this mineralization to favorable stratigraphic horizons, structures, and facies changes will be shown when a report is given on the completed Stage III drilling.

The following is a tabulation of the drilling as authorized and completed. Forms MF-104 and MF-104A for April and May are attached for payment and made part of this Progress Report for May, 1957. Drill contractor statement is included showing a total footage drilled of 2,900 feet @ .80¢ per foot or $2,320.00.

Administrative Audit Difference Statement

Charles M. Coleman & Associates
139 N. Clark Street
Chicago 2, Illinois

Date: December 20, 1956
Payee's Reference: October 1956

DMEA-4047

Gentlemen:

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed	$	3,236.00
Difference	$	
Amount Approved	$	* 3,236.00

The reason for the difference was due to:

*Reinstated: The amount of $300.00 which was withheld from the May 1956 Voucher.

Withheld: The amount of $400.00 pending resolution of matters relative to closing the account.

RECEIVED
DEC 26 1956
D.M.E.A.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N. E. Stokes

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA 4047 (Uranium) Contract Idm-E943, Charles M. Coleman and Associates (Clyde, Marsh and Longport groups) Fremont County, Wyoming. Operator's Monthly Progress Report for the month of October, 1956 (FINAL)

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended for 75 percent of the amount reported on Form MF-104 for October, 1956, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Reinstate the amount of $300.00 which was withheld from the May, 1956 voucher.

Withhold an amount of $400.00 pending resolution of matters relative to closing the account. The contract work has been completed.

Reconciliation with the amount Reported by the Operator on Form MF-104 for October, 1956

Amount reported on Form MF-104 for Oct., 1956 - - -		$3,236.00
Government participation at 75 percent - - - - - - - - -		2,427.00
Amount to be withheld - - - - - -	$400.00	
Amount to be reinstated - - - - -	300.00	
Net deduction		100.00
Recommended payment to Operator		$2,327.00

Note: Work approval of August 22, 1956 included four offset holes to be drilled 100 feet north, east, south and west from Hole M-3. The four holes were actually drilled northeast, northwest, southeast and southwest from Hole M-3. The variation is acceptable to the Government as the holes accomplished the objectives satisfactorily.

Attached is a copy of a memorandum dated November 30, 1956 from John F. Shaw and E. N. Harshman which confirms the acceptability of the holes.

Remarks

DMEA
DEPARTMENT OF THE INTERIOR
DEC 3 1956
REGION III
DENVER, COLORADO

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: John F. Shaw
E. N. Harshman

Subject: DMEA Docket 4047 (Uranium), Contract Idm-E 943, Charles M. Coleman and Others (Clyde, Marsh, and Longport claim groups), Fremont County, Wyoming

In a letter dated August 22, 1956, you gave the subject operator approval to perform certain work under Stage II of contract Idm-E 943 which included four offset holes respectively 100 feet north, south, east, and west of hole M-3.

The operator's MF-104 report for October 1956 indicates that the holes were drilled 100 feet northeast, northwest, southeast, and southwest of hole M-3.

Since there are no known ore trends in the area of hole M-3, we believe that the direction of offsetting is not important and that the holes as drilled accomplished the objectives fully as well as would have holes at the positions recommended in your letter.

Memorandum

Building 20
Denver Federal Center
Denver 2, Colorado
November 27, 1956

DMEA
DEPARTMENT OF THE INTERIOR
NOV 27 1956
REGION III
DENVER, COLORADO

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: E. O. Binyon

Subject: Docket DMEA 4047 (Uranium) Contract Idm-E943, Charles M. Coleman and associates (Clyde, Marsh, and Longport Claim Groups) Fremont County, Wyoming. --Progress report for October, 1956.

Two inspection trips were made to the property; one on October 4 and the other on November 8, 1956.

The holes numbered M-101 through M-110, as reported, were drilled to an aggregate total depth of 2,480 feet; holes numbered M-101 through M-104 each being 200 feet and the remaining 6 holes being 280 feet in depth. One hole, M-9, was lost at 140 feet and a new hole had to be drilled. As shown on the map accompanying the operator's reports, the location of the holes is approximately as designated by Amendment No. 1.

A check of the cuttings from holes M-101 through M-104 and M-106 through M-110 gave readings of background or at best only slightly above. The cuttings from hole 105 gave a slightly higher reading but did not approach ore-grade material.

A check of the MF-104 and MF-104A shows them to be in order, however, the operator has included two MF-104A forms. Mr. John Kopuster stated that he had been instructed to submit one form for stage I and one for stage II.

All expenditures are properly documented and it is recommended that the operator be paid $2,427.00 or 75 percent of $3,236.00 the total expenditures. It is further recommended that the $300.00 withheld pending action on stage II work continue to be withheld for a final report.

One copy of the geologist's report has been retained by this office.

E. O. Binyon
Mining Engineer

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

REPORT ON WORK ACCOMPLISHED UNDER STAGE II

Exploration Project Contract
Charles M. Coleman and Associates
Docket No. DMEA - 4047

Marsh Claim Group

All drilling under Stage II of the above named DMEA contract was restricted to the Marsh claims 1 through 6 in sections 32 and 33, T. 33 N., R. 90 W., Gas Hills district, Fremont County, Wyoming. Previous to this, eighteen rotary non-core holes were drilled totaling ~~710~~ 1960 feet under DMEA contract Stage I. The attached map shows the location and depth of all holes completed under Stage I and Stage II.

Exploration Drilling

Stage II drill holes were drilled to the required depths and approximate locations as per the attached map. Drill hole locations were surveyed with plane table. Elevations were corrected to drill hole M-3 which had received an assumed elevation under the Stage I drilling of 6,582 feet.

Drilling under Stage II was started on October 2, 1956 and completed on October 10, 1956. The drilling was done with a Mayhew rotary drill. Dust samples were collected with a drilling medium of air, powered by a 600 c.f.m. air compressor. At depths averaging greater than 140 feet water was usually used as the drilling medium. Samples were then taken from the "mud box" by screen and shovel. All samples, air and water borne, were collected at two foot intervals.

Sampling and Drill Hole Probing

Samples were logged lithologically and checked for radioactivity with a La Roe Scintillation Counter, model FV-5V. Samples were collected and saved from each two foot interval, with duplicate samples taken for assay purposes from intervals that gave two or more times background count. It is always the case with continuous drilling that a lag in samples can be expected. Therefore, the highest radioactive samples do not always conform to the peak radioactivity as shown by the drill hole probe readings.

All holes were probed with a Model 610 Babbel Counter and deep hole probe. Readings as shown on the accompanying drill hole logs are in equivalent percent U_3O_8. The probe and counter have been calibrated and standardized on drill holes and ore barrels of known chemical uranium content and in ore similar to what would be expected to underlie the Marsh claim group. It is therefore believed that all drill hole probe readings reflect the true uranium content, especially in those unoxidized zones at or below the 120 to 140 foot deep water table.

Ore and Mineralization

General

The Stage I and Stage II drilling as well as drilling on adjacent property has indicated, in a general way, two zones of moderately continuous mineralization. These mineralized zones are contemporaneous with the common "blue clay" zones of medium grained sand and silt with a bentonitic montmorillonite type clay bonding that reflects a bluish

cast to the sediments. It is universal throughout the Gas Hills district that within such sediments the major portion of the producing uranium bodies lie.. Further, such sediments must be accompanied by a visible pyrite content or "pyritization" and disseminated carbon. The same sediments must also contain about a 50-50 ratio between the sand and clay phases of the sediments to allow for favorable permiability within the "blue clay" host rock.

From the above description, one can easily ascertain the genesis of uranium deposition. (1) The leaching and solution of uranium salts from arkosic sands or tuff beds. This need not be a single event phenomenon. (2) The traveling in solution of UO_2^{++} ions and forming compounds with $SO_4^{=}$ and silica. (3) Reduction of the UO_2SO_4 to black uranous compounds like uraninite or coffinite by the carbon bearing "blue clays." The end result is a mineralized or ore bearing "blue clay" with pyrite or FeS_2 formed from the reduced UO_2SO_4. The reduction is accomplished at or near the ground water table, preferably a fluctuating water table that may tend to concentrate the mineral in a supergene type or uranium enrichment. Ores in "blue clays" above the present water table reflect the perched type of water zone as well as the relative stability of uranium compounds once they have become associated with the montmorillonite type clays and carbon compounds.

In effect, then, the search for uranium ores is greatly encouraged by the following criteria:

A) Dark blue dusky clay with a medium grained quartz sand at a ratio of about 50-50. This "blue clay" should preferably be within an alternating series of medium to coarse grained sands and silts showing recementing by calcite and red to brown iron stains.

B) Pyritization. The occurrence of pyrite is important and often forms a halo of pyritization in and around the uranium mineralization because of the chemistry as above explained.

C) Uranium mineralization. This mineralization is often associated with thin "blue clay" layers at what is termed the "change of formation" contact. This mineralization is often 12 to 18 inches thick and reflects the above explained mode of supergene concentration on fluctuating or perched ground water tables. This type of "change of formation" mineralization is unimportant. However, with the advent of an undulating or irregular, porous "blue clay" horizon and pyritization, this low grade mineralization becomes important to the control of future drilling and projected trends of thickening "blue clay" ores.

The widespread association of visible or microscopic pyrite and the readily ascertainable uranium content of these sediments forgoes the necessity of testing for arsenic, molybdenum, or other trace elements which are proportionate to the uranium content.

Specific

The drill holes M-101 through M-110 were drilled as prescribed by the regional offices of DMEA and termed Stage II drilling. The accompanying map shows the location of both Stages I and II drill holes. The drill holes are also plotted on the accompanying CROSS SECTION MAP in a fashion to show the continuity and extent of the mineralized "blue clay."

The Stage II drilling confirmed the presence of two "blue clay" horizons. The horizons are shown best developed in cross sections A - A' and B - B'. The "blue clay" horizons are at depths approximating 100 and 200 feet deep. The cross sections show a gentle northeast dip of the sediments (5°) reflecting the Puddle Springs Anticline. In the CROSS SECTION MAP constructed the sedimentation is of such uniformity as to exclude the possibility of any faults of moderate size.

The upper "blue clay" zone is best developed in the northern portions of claims number 1 and 2. This horizon rapidly thins southward. The lower "blue clay" horizon thins southward and entirely disappears at cross section C - C', except for occasional mudballs in drill hole M-108. The cross sections also show the possible continuation and thickening of the lower "blue clay" zone to the northeast.

Calibrated probe readings indicate the following mineralized zones:

M-101	188' to 190'	.11% U_3O_8
M-102	189.5' to 190.5'	.14% "
M-103	173.5' to 174.5'	.06% "
M-104	174.5' to 180.5'	.08% "
M-105	201' to 206'	.18% "
M-106	191' to 192.5'	.08% "
M-109	214.5' to 217'	.11% "

Chemical assays from Uranium Center Laboratory on the indicated footages and drill hole numbers are attached to this report.

Before advancing recommendations for future work, the writer refers to the following hypothetical cases under the heading "Economic Considerations" as an instrument to better inform the reader on the validity and justification of the small amount of drilling recommended.

Economic Considerations

Average size ore bodies in the Gas Hills are difficult to define. A great many ore bodies of moderate size averaging 12,000 tons have been and are being mined. The following hypothetical case will clarify the practicability of continued drilling on the Marsh claim group.

Future drilling uncovers an ore body in the upper "blue clay" zone ten feet thick and averaging .20% U_3O_8. The total tonnage is about 12,000 tons and the depth 100 feet:

Expenditure	
Stripping cost (contract)	- $ 46,950
Ore loading (contract)	- 4,930
Engineering	- 2,200
Overhead (Supervisor, transportation, etc.)	- 7,500
Assay and control	- 500
Interest on capital expenditures	- 920
Total Cost	- $ 63,000.
Income	
12,000 tons .20% U_3O_8 @ $16.00	- $192,000
Production bonus, first 2500 tons @ $14.00	- 35,000
	- $227,000.
10% U_3O_8 dilution and mining loss	- -37,000
	- $190,000.
Royalty	- -19,000
State Tax, 3½%	- - 6,650
Mining Cost	- -63,000
Net Income*	- $101,350.

* Exclusive of corporate or income tax.

Future drilling uncovers a similar size ore body in the lowered "blue clay" zone, 12,000 tons and 200 feet deep:

Expenditure	
Stripping cost (contract)	- $131,460.
Ore loading cost (contract)	- 9,600
Engineering	- 4,750
Overhead (Supervisor, transportation, etc.)	- 17,500
Assay and control	- 500
Interest on capital expenditure	- 2,450
Total Cost	- $166,260.
Income	
12,000 tons .20% U_3O_8 @ $16.00	- $192,000
Production bonus, first 2500 tons @ $14.00	- 35,000
	$227,000.
10% U_3O_8 dilution and mining loss	- -37,000
	$190,000.
Royalty	- -19,000
State Tax	- [illegible],650
Mining Cost	-166,260
Deficit	- $ 1,910.

Thus it is shown that to double the stripping depth for an ore body, the mining cost increases (in this case) about three-fold.

The Marsh group of claims has had the lower "blue clay" horizon almost sufficiently tested to prevent there being an ore body of greatly larger areal extent than above referred to in the hypothetical case (190 by 100 feet).

The upper "blue clay" zone has been tested only in the same deep holes that penetrated the lower horizon. Only hole M-3 of the Stage I drilling was deep enough to even cut the upper "blue clay" horizon. However, because of the greater profit incentive, and the necessarily small areal extent of ore bearing material needed to be encouraging in the upper horizon, a greater amount of drilling is recommended.

Recommendations for Future Work

The CLAIM MAP shows a cross hatched area of the areal extent of the upper "blue clay" horizon which present drilling has indicated to be interesting. This area is of pyritic dusky "blue clay" five to ten feet thick. Drill holes M-101 through M-106 have already cut the horizon.

1. Deepen drill hole M-2 to 120 feet.
2. Drill one hole 120 feet deep between M-105 and M-106.
3. Drill one hole 120 feet deep 100 feet west of the 1/4 corner.
4. Drill two offset holes to M-11, 50 feet deep.

One hole should test the lower blue clay horizon offsetting the ore in drill hole M-105.

1. Deepen hole M-1 to 240 feet.

The drilling recommended totals 560 feet. The results of this recommended drilling will be conclusive enough to state whether there is any possibility of commercial ore deposits within the Marsh claim group to a depth of 240 feet.

Respectfully submitted,

Robert Ford

Chicago 2, Illinois

Date: August 9, 1956
Payee's Reference: May 1956

FINAL DISTRIBUTION

Gentlemen:

MADE AUG 9 1956

DMEA-4047

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed $ 3,534.00

Difference $

Amount Approved $ * 3,534.00

The reason for the difference was due to:

Withhold - $300.00 pending action on Stage II Work.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N. E. Stokes
Audit Section

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4047 (Uranium) Contract Idm-E943, Charles M. Coleman and Associates (Clyde, Marsh and Longport groups of claims) Fremont County, Wyoming - Operator's Monthly Progress Report for the month of May, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended was performed in conformance with the general provisions stipulated in Exhibit "A" to the contract. Payment is recommended for 75 percent of the amount as reported on Form MF-104, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations, except for the following deduction.

Withhold an amount of $300.00 pending action on the Operator's request for Stage II work and so inform the Operator by means of Administrative Audit Difference Statement. Stage I work was completed during May, 1956

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shear
Supervising Mining Engineer

From: Chas. R. Garrett, Jr.

Subject: DMEA 4047 (Uranium) Contract Idm-8943 - Charles M. Coleman and Associates, Riverton Uranium Corp., Fremont County, Wyoming -- Progress report for May 1956

Progress on this exploration project was inspected on June 12, 1956. Work started on May 8, 1956 and all of Stage I was completed by May 24, 1956. The work was carried out in accordance with terms of the contract and conducted in a good workman-like manner. During this period the company drilled 29 rotary drill holes, on the subject property, for a total of 2,565 feet. This was more footage than allowed by the contract, but the information gained by the additional drilling was considered to merit the extra cost to the company. Two holes were drilled to 270 and 280 feet depths respectively, in order to explore the lower portion of the Upper Wind River formation, which could not be reached by holes of less depth. One of these holes, M-3, penetrated a radioactive zone at 178 feet, which disclosed 2 mineralized strata, each about 2 feet thick with an indicated grade of 0.20% U_3O_8. This horizon in the lower portion of the Upper Wind River formation is productive on nearby properties and is the general target for exploration work. The Company used a 4½ inch rotary bit for drilling which was of sufficient size to disclose geologic information and to provide ample material for samples.

In conjunction with the drilling in Stage I, 7 trenches were excavated for a total of 1,780 feet on the Clyde group of claims. Each trench was excavated to sufficient depth to expose a fresh cut face 6-8 feet high over the anomalous rim and slope of the mesa on the Clyde group of claims. This is less trenching than allowed by the contract but the poor showings of mineralization and radioactivity disclosed by the trenches indicated that further trenching was not merited.

A coarse unconsolidated conglomerate was encountered in many of the drill holes and gave trouble by causing sluff from near its base into the lower portion of the hole. As a result of this condition, Hole M-7 was abandoned and Hole M-7A was drilled close-by. Also, Hole M-12, which lost its air due to sluffing of sand in the hole, was abandoned and Hole M-12A was drilled close-by.

The geologist in charge was approved by the Government and did the exemplary work on this project. All drill holes were probed radiometrically, and the data is included in the company report for May. Samples were collected of the drill cuttings when necessary, and were assayed. A portion of each sample was retained for Government purposes and the Company supplied the Government with a copy of the assay results obtained from samples analyzed for this project.

All expenditures made in connection with the contract have been satisfactorily documented and an audit could be deferred until the project is completed. It will be noted that the company has waived any claim to the cost of "Payroll Taxes and Insurance" for the reason the Company does not maintain any regular payroll and it is difficult to separate the allocable portion of the insurance carried by the Riverton Uranium Corporation, which was employed to cover the operations.

There appears to be an error in the Company's computation of "Unit Costs, Authorized by Contract" for the unit cost of drilling, the author arrives at $1.535 per foot instead of $1.550 per foot as reported by the Company on Form MF-104A. However, this difference may be due to a different distribution of incidental costs to drilling.

It is recommended that the company be paid $2,650.50, which is 75 percent of $3,534.00 and its allowable share of the cost of this stage of the exploration project.

The Company has submitted a proposal for further exploratory work, which at present, is being reviewed.

Charles R. Garrett, Jr.

Signature Charles R. Garrett, Jr. Title Mining Eng. Date July 26, 1956

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. M. Davey Title Executive Officer Date AUG 3 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

Date June 14, 1956 Operator Charles M. Coleman and Associates.

Per [signature] Title Attorney-in-fact.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

REMARKS: * Unit costs includes Supervision, Technical Services, Sample Containers, Rentals & Accounting.

** This amount does not include $35.00 washout time to reopen hole for probing.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

June - 1956

REPORT ON WORK ACCOMPLISHED UNDER STAGE I

PROPOSALS FOR WORK TO BE PERFORMED UNDER STAGES II AND III

D M E A CONTRACT No. Idm - E 943

WORK PERFORMED - STAGE I

Drilling under Stage I was started on May 8, 1956 and completed on May 17, 1956. A loss of time due to a breakdown of equipment caused the bulldozing to lag behind the drilling, and the bulldozing was not completed until May 24, 1956.

The drilling was done with a Mayhew rotary drill mounted on an International truck. Dust samples were collected with a cone collector of the Duclone type, and a 600 c.f.m. air compressor was used to furnish air with which to remove cuttings from the holes. Samples were taken at two-foot intervals. The cuttings were logged lithologically and screened with a LaRoe Scintilation Counter, Model FV-5U. Samples weighing about one-half pound were taken from each two-foot interval, with duplicate samples taken for assay purposes from those intervals that indicated significant radiometric count.

All holes were logged with a Babbel Counter, Model 610, and a reel-mounted probe with a depth recorder. The attached logs of the holes show lithologic, radiometric, and assay information.

No mineralization of any consequence was found in the drill holes on the Clyde and Longport groups. One shallow and one deep occurrence of ore-grade mineralization were encountered in the drilling on the Marsh group. This mineralization, particularly the deep (178.5 - 186.5') occurrence is encouraging and warrants further exploration.

Stratigraphic information derived during the work indicates that most of the drilling on the Marsh group and probably all of the drilling on the Clyde and Longport groups was too shallow to intersect the horizons known to be favorable for ore deposition. Stage II drilling should be done to deeper depths than previously planned in order that the favorable stratigraphic zone can be penetrated.

Clyde Group

Work performed on the Clyde group of claims constituted drilling two holes to a depth of 50 feet to explore a small anomalous area on claim # 17 (see attached map), and bulldozing seven tractor trenches to explore the stratigraphy around the west and northern sides of the anomalous area on claims nos. 11, 12, 13, and 14.

The two drill holes (C-1 and C-2) were put down through sandstone and siltstone of the upper Wind River formation without encountering significant mineralization. It is thought that further drilling on the Clyde group should be confined to the central portion of the claim group where minor faulting indicates possible favorable conditions at depth. It is believed that the most favorable beds will be near the base of the upper Wind River formation at a depth of probably not to exceed 200 feet below the surface.

The tractor trenches cut across the upper beds exposed on claims nos. 11, 12, 13, and 14, exposed conglomerate, sandstone, tuff and mudstone of the White River formation. Abnormally high count was found in the upper sandstones, siltstones, tuffs, and mudstones, but samples cut across the beds of highest radiometric count indicated a maximum content of 0.05 percent U_3O_8. The highest radiometric count and assay values were obtained from sandstone occurring with and beneath the cobble conglomerate that caps the hill, and in mudstone immediately beneath the sandstone.

The writer believes that additional tractor trenching would be of little value, and that drilling to the base of the upper Wind River formation is a preferable means of exploration. It is inferred that the base of the upper Wind River formation is probably not deeper than 200 feet beneath the surface. However, until more information on the area is available, it is believed that available money can be more usefully expended on the Marsh and Longport groups of claims.

Longport Group

Seven rotary non-core holes were drilled at locations designated on the map accompanying the Exploration Contract. They are shown on the attached map of the Longport group. All were drilled to a depth of 50 feet, except hole no. L-2, drilled to a depth of 270 feet (50 feet specified in the contract). No significant mineralization was encountered.

However, as the holes penetrated beds higher in the upper Wind River formation than those that have proven elsewhere to be more favorable, the results of the drilling are not conclusive. It is believed that drilling to the base of the upper Wind River formation may disclose ore-grade uranium mineralization. Proposals for additional drilling are made later in this report.

Marsh Group

Eighteen rotary non-core holes were drilled at locations designated on the map accompanying the Exploration Contract. The attached map shows the location and depth of these holes, as well as the location of holes proposed for Stage II. Hole M-3 was drilled to 280 feet (120 feet specified in the contract), hole M-7A was drilled to 140 feet (120 feet specified), and hole M-12A was drilled to 140 feet (120 feet specified). The remaining holes were drilled to depths specified; attached is a list of collar elevations of all holes drilled.

Two mineralized intercepts of believed ore grade were encountered in hole M-3. Depths and grade of the intercepts are as follows:

178.5' - 180.5' = 2.0 feet. Est. grade 0.20% U_3O_8
185.0' - 186.5' = 1.5 " " " 0.20%

Hole probed with Model 610 Babbel Counter in calibration

Unoxidized ore believed to be in calibration

Water encountered at 140 feet and hole was finished using water as a circulating medium. Count in samples was noted from 190 to 206 feet, the discrepancy in depth believed to be due to a mistake on depth made by the driller. Two samples taken for assay contained 0.01% U_3O_8 for interval 196 to 198 feet, and 0.02% U_3O_8 for interval 198 to 200 feet.

Of the other holes drilled on the Marsh group, only hole M-11 intersected significant mineralization. In that hole, a 1.5 foot thick chocolate brown siltstone 40 feet above the conglomerate (28 - 29.5 feet below the collar of the hole) assayed 0.137% U_3O_8, and a 2 inch thick streak of carbonaceous material in fine grained sandstone at 41.5 feet assayed 0.11% U_3O_8. Radiometric count but no commercial assay values were obtained in holes M-4, M-8, M-9, and M-13, all above the conglomerate.

Hole M-3 was drilled through the base of the upper Wind River formation to obtain stratigraphic information and test the lower horizons. That hole, together with the others, yielded information indicating that none of the holes except M-3 penetrated the horizons in which ore bodies have been found to the west and to the north of the Marsh group.

All of the ore in the Gas Hills District has been found in the upper Wind River formation, composed largely of coarse arkosic sandstone and conglomerate with relatively minor amounts of siltstone and mudstone. The lower Wind River formation consists preponderantly of siltstone and mudstone, and has few arkosic sandstone beds. Red siltstone beds mark the contact between upper and lower Wind River beds in the vicinity of the Marsh group. Nearby ore deposits are from 50 to 180 feet above red beds.

A conglomerate bed from fifteen to thirty feet thick crops out near the north end of the Marsh group, and goes beneath the surface to the south. It is believed to be the same conglomerate that occurs on the Ola group, and contains granite and quartzite cobbles to 6 inches in diameter and black chert. This conglomerate bed is of widespread occurrence in the vicinity of the Marsh group, and serves as a useful marker bed.

The Globe Mining Company has drilled out an ore deposit on the Ola group that occurs about 70 feet stratigraphically below the conglomerate bed. The base of the conglomerate is approximately 245 feet above the red beds in drill hole M-3. If the relationship between the conglomerate and red beds is the same on the Ola group as on the Marsh group, the ore deposit on the Ola group is approximately 175 feet above the red beds.

The Gas Hills Uranium Corporation is currently drilling an ore body on the Sagebrush group of claims about one-half mile northwest of the Marsh group. This ore body is 180 feet above the red beds. The ore deposits on the Bullrush group adjoining the Sagebrush group are known to occur at from 120 to 160 feet above the red beds. The Bridger Mining Company, in Sec. 30, T33N, R90W, is stripping to ore believed to occur at about 50 feet above the red beds.

Inasmuch as the significant ore deposits in the vicinity of the Marsh group occur from 50 to 180 feet stratigraphically above the base of the upper Wind River formation, it is to be expected that ore on the Marsh group will be found in the same general stratigraphic zone. Mineralization found in hole M-3, 76 feet and 83 feet above the red beds, bears out this viewpoint, and makes it almost mandatory that further exploration on the group be done at depths proven favorable on surrounding properties.
