COPPER IN JUNE 2016

The U.S. average daily mine production of recoverable copper in June 2016 decreased by 4% compared with that in May 2016 and was 3% more than that in June 2015. Second quarter and first half 2016 mine production of recoverable copper each increased by 6% compared with those of the same periods in 2015. Total monthly mine production in June 2016 decreased by 7% and total monthly refinery production decreased by 5% compared with those in May 2016 (fig. 1, table 1).

Average daily smelter production in June 2016 decreased by 9% compared with that in May 2016 and average daily electrolytic refinery production decreased by 7% owing to decreased production at one smelter. Smelter and electrolytic refinery production in June 2016 each increased by 4% compared with those in June 2015. Second quarter 2016 smelter production increased by 20% and production in the first half of 2016 increased by 8% compared with those of the same periods in 2015. Second quarter 2016 electrolytically refined production increased by 17% and production in the first half of 2016 increased by 20% compared with those of the same periods in 2015 (tables 3, 4).

Total refined copper stocks in the United States at the end of June decreased by 10% compared with those at the end of May, owing to a 28% decrease in stocks at refineries and a 26% decrease in domestic LME stocks. Total refined stocks at the end of June 2016 were 13% less than those at the end of June 2015 (table 10).

The average June 2016 COMEX spot copper price was essentially unchanged at \$2.10 per pound from the average price in May and was 22% less than the average price in June 2015 (table 11). The average June 2016 New York dealers' number 2 scrap price decreased by 3% to \$1.50 per pound from the average price in May and was 29% less than the average price in June 2015 (table 12).
