DIRECTORY OF PRINCIPAL AGGREGATES PRODUCERS IN THE CONTERMINOUS UNITED STATES IN 2002

Based on information reported to the U.S. Geological Survey quarterly sample survey, it was estimated that a total of 2.7 billion metric tons of aggregates—1.6 billion metric tons of crushed stone and 1.1 billion metric tons of construction sand and gravel—was produced and shipped for consumption in the United States in 2002. The quarterly sample survey collects information by company and State only, and not by individual operation. To provide the listings included in this directory at an earlier date, starting this year, the format of the Aggregates Directory has been modified by eliminating the information regarding the number of operations and the counties where those operations are located. This information is collected by the annual surveys and will be published in the crushed stone and construction sand and gravel directories later in the year.

A total of 319 companies and subsidiaries representing large and medium size producers that operate crushed stone quarries and construction sand and gravel pits in 48 States reported to the quarterly survey during 2002. Only those companies are listed in this directory. The first three tables list the top 25 U.S. companies that produce aggregates, crushed stone, and construction sand and gravel. The ranking of companies in these tables is based on the total production-for-consumption provided by the companies to the quarterly survey. Table 4 lists the producers in each of the 48 States that report to the quarterly survey.
