COPPER IN NOVEMBER 2011

Average daily mine production of copper rose by 9% in November from that in October and was at the highest level since May 2009. Year-to-date production through November, however, was essentially unchanged from that in the same period of 2010. Consumption of refined copper in November was slightly higher than that in November 2010, but year-to-date consumption was essentially unchanged from that in the same period of 2010.

Stagnant demand for refined copper, however, did not necessarily reflect domestic demand for downstream semifabricated products. Apparent consumption of wire rod (shipments plus net imports), the leading use for refined copper, increased by about 5% in the first 11 months of 2011 compared

with that in the same period of 2010 as the United States went from being a net exporter of wire rod to a net importer. During the same comparative periods, imports of wire rod rose by 39,800 metric tons (t) to 137,600 t while exports declined by 14,800 t to 120,000 t. Canada was the leading source of wire-rod imports, accounting for 90% and 69%, of imports during the first 11 months of 2010 and 2011, respectively, and Mexico was the leading destination for exports, accounting for 76% and 71%, respectively, of exports. While there were no imports of wire rod from Russia in the first 11 months of 2010, Russian wire rod accounted for 20% of imports of wire rod in the first 11 months of 2011.

TABLE 1
SALIENT STATISTICS OF THE COPPER INDUSTRY IN THE UNITED STATES¹

^PPreliminary.

¹Data are rounded to no more than three significant digits; may not add to totals shown.

²Copper content of blister and anode.

³Stocks of refined copper as reported; no estimates are made for nonrespondents.

⁴Monthly estimates based on reported and 2010 annual data, comprising stocks at ingot makers, chemical plants, foundries, and miscellaneous manufacturers.

⁵London Metal Exchange Ltd., U.S. warehouses.
