COPPER IN FEBRUARY 2016

The U.S. average daily mine production of recoverable copper in February 2016 increased by 4% compared with that in January 2016 and was 10% greater than that in February 2015. The year-over-year increase was mainly owing to increased production in Arizona and Utah. Total monthly mine production in February 2016 decreased slightly and total monthly refinery production decreased by 7% compared with that in January 2016 (fig. 1).

Average daily smelter production in February 2016 increased by 8% compared with that in January owing to a temporary disruption at one of the smelters that reduced production in January. Average daily electrolytic refinery production decreased by 9% compared with that in January 2016 as the decrease in smelter production in January reduced the availability of anodes in February. Smelter production in February 2016 increased by 7% and, despite reduced anode availability, electrolytic refinery production increased by 6% compared with that in February 2015.

Total refined copper stocks in the United States at the end of February decreased by 3% compared with those at the end of January and were 18% greater than those at the end of February 2015. The year-over-year increase reflected a 278% increase in COMEX stocks and a 24% increase in brass mill stocks (table 10).

The average February 2016 spot COMEX copper price increased by 3% to \$2.08 per pound from the average price in January 2016 and was 21% less than the average price in February 2015 (table 11).

Industry News

Freeport-McMoRan Copper & Gold Inc. announced that it would sell a 13% ownership interest in the Morenci Mine to Sumitomo Metal Mining Co., Ltd. for \$1.0 billion in cash. After the sale, Freeport will have a 72% ownership interest; Sumitomo Metal Mining Arizona Inc., 15%; and Sumitomo Metal Mining Co., Ltd., 13%. The sale was expected to be completed in mid-2016 (Freeport-McMoRan Copper & Gold Inc., 2016).

Revere Copper Products Inc. (Rome, NY), announced in February that during the following 2 to 6 months it would eliminate its extrusion and brass operations. The company will continue to manufacture copper products, but up to 40 maintenance and production jobs could be lost (Neff Roth, 2016).
