MARKETABLE PHOSPHATE ROCK IN JANUARY 2011

U.S. marketable phosphate rock production in January was 2.31 million metric tons (Mt), which was 4% higher than that in December 2010 and 18% higher than that in January 2010, according to the U.S. Geological Survey. Total production in 2010 was 25.7 Mt, which was 3% lower than that in 2009.

Phosphate rock used in the United States in January was 2.30 Mt, which was 3% higher than that in December 2010 and 2% lower than that in January 2010. U.S. producer stocks were 3% higher than those in December 2010 and 27% lower than those in January 2010.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, imports of phosphate rock were estimated based on data from Census and other sources.

Apparent consumption of phosphate rock increased by 10% in 2010 to 30.2 Mt, compared with 27.5 Mt in 2009. Estimated apparent consumption for 2011, based on annualized data, was 30.3 Mt.
