MARKETABLE PHOSPHATE ROCK IN JANUARY 2013

U.S. marketable phosphate rock production in January was 2.6 million metric tons (Mt), which was 9% more than that in December 2012 and 25% more than that in January 2012.

Phosphate rock used in the United States in January was 2.41 Mt, which was slightly less than that in December 2012 and 11% more than that in January 2012. U.S. producer stocks were 4% more than those at the end of December and 62% more than those at the end of January 2012.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, imports of phosphate rock were estimated based on reported data from Census and PIERS.

Estimated apparent consumption for 2013, using annualized data, was 31.4 Mt compared with 30.3 Mt in 2012.
