MARKETABLE PHOSPHATE ROCK IN OCTOBER 2013

U.S. marketable phosphate rock production in October was 2.28 million metric tons (Mt), which was 16% less than that in September and 12% less than that in October 2012. Production in January through October was 26.5 Mt, which was 5% more than in the same period of 2012.

Phosphate rock used in the United States in October was 2.39 Mt, which was 3% less than that in September and 6% more than that in October 2012. Phosphate rock used in January through October was 24.2 Mt, which was 9% more than in the same period of 2012. U.S. producer stocks were slightly less

than those at the end of September and 25% more than those at the end of October 2012.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major supplier to the United States. Therefore, annual imports of phosphate rock were estimated based on reported data from Census and PIERS.

Estimated apparent consumption for 2013, using annualized data, was 31.6 Mt, compared with 30.4 Mt in 2012.
