MARKETABLE PHOSPHATE ROCK IN JUNE 2014

U.S. marketable phosphate rock production in May was 2.31 million metric tons (Mt), which was 4% less than that in May and 13% less than that in June 2013. Production for January through June was 13.6 Mt, which was 17% less than in the same period of 2013.

Phosphate rock used in the United States in June was 2.29 Mt, which was 10% less than that in May and 7% less than that in June 2013. Phosphate rock used in January through June was 13.7 Mt, which was 4% less than that in the same period of 2013. U.S. producer stocks were 3% less than those at the end of May and 10% less than those at the end of June 2013.

The U.S. Census Bureau does not report some of the phosphate rock import data from Morocco, which is the major

supplier to the United States. Therefore, annual imports of phosphate rock were estimated based on reported data from Census and PIERS.

Estimated apparent consumption for 2014, using annualized data, was 30.3 Mt, compared with 31.3 Mt in 2013.
