CRUSHED STONE AND SAND AND GRAVEL IN THE FIRST QUARTER 2013

An estimated 211 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the first quarter of 2013, an decrease of 4% compared with that of the same period of 2012. The estimated annual output produced for consumption in 2012 was 1.16 billion metric tons (Gt), flat compared with the reported annual output for 2011.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the first quarter of 2013 was 141 Mt, a slight decrease compared with that of the same period of 2012. The estimated annual output produced for consumption in 2012 was 839 Mt, an increase of 4% compared with the reported annual output for 2011.

The estimated U.S. output of *construction aggregates* produced and shipped for consumption in the first quarter of 2013 was 352 Mt, a decrease of 3% compared with that of the same period of 2012. The estimated annual output produced for consumption in 2012 was 2.00 Gt, flat compared with the reported annual output for 2011.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

The estimated *portland cement* consumption increased by 3% in the first quarter of 2013 compared with that of the first quarter of 2012 and increased by 9% for 2012, compared with annual consumption in 2011. This information is obtained from the USGS monthly survey of U.S. cement producers.

The quarterly sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The cause behind a large change can be attributed to the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously reported data are occasionally revised, and the estimated

quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production-for-consumption of *crushed stone* in the first quarter of 2013 increased in three of the nine geographic divisions compared with that sold or used in the first quarter of 2012. The largest increases were recorded in the Pacific and West South Central divisions. Production-for-consumption decreased in 29 of the 46 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, Missouri, Florida, Pennsylvania, and Oklahoma. Their combined total production-for-consumption was 85.6 Mt and represented an increase of 4% compared with that in the first quarter of 2012.

The estimated production-for-consumption of *construction sand and gravel* in the first quarter of 2013 increased from first quarter 2012 levels in three of the nine geographic divisions. The largest increases in percentages were recorded in the Pacific and West South Central divisions. Production-for-consumption decreased in 29 of the 46 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, California, Arizona, Washington, and Colorado. Their combined total production-for-consumption was 54.2 Mt which was an increase of 7% compared with that in the first quarter of 2012.

The estimated production-for-consumption of *construction aggregates* in the first quarter of 2013 increased in three of the nine geographic divisions compared with that sold or used in the first quarter of 2012. The largest increases were recorded in the Pacific and West South Central divisions. Production-for-consumption decreased in 30 of the 44 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, Florida, California, Missouri, and Pennsylvania. Their combined total production-for-consumption was 124 Mt and increased 6% when compared with that of the same period of 2012.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

³Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

⁴State not included in quarterly survey.
