CRUSHED STONE AND SAND AND GRAVEL IN THE SECOND QUARTER 2013

An estimated 321 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the second quarter of 2013, a slight increase compared with that of the second quarter of 2012. The estimated production for consumption in the first 6 months of 2013 was 533 Mt, a slight decrease compared with that of the same period of 2012.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the second quarter of 2013 was 234 Mt, a slight decrease compared with that of the second quarter of 2012. The estimated production for consumption in the first 6 months of 2013 was 375 Mt, a slight decrease compared with that of the same period of 2012.

An estimated 555 Mt of total *construction aggregates* was produced and shipped for consumption in the United States in the second quarter of 2013, a slight decrease compared with that of the second quarter of 2012. The estimated production for consumption in the first 6 months of 2013 was 908 Mt, a slight decrease compared with that of the same period of 2012.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

The estimated *portland cement* consumption increased slightly in the second quarter of 2013 compared with that of the second quarter of 2012. The estimated consumption in the first 6 months of 2013 also increased slightly compared with that of the same period of 2012. This information is obtained from the USGS monthly survey of U.S. cement producers.

This sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The usual cause behind a large change can be attributed to the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously-reported data are occasionally revised, and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry

Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production-for-consumption of *crushed stone* in the second quarter of 2013 increased in five of the nine geographic divisions compared with that sold or used in the second quarter of 2012. The largest increases were recorded in the West South Central, East South Central, and the South Atlantic divisions. Production-for-consumption increased in 18 of the 46 States that were estimated. The five leading States, in descending order of production-for-consumption, were Texas, Pennsylvania, Missouri, Ohio, and Florida. Their combined total production-for-consumption was 113 Mt and represented 35% of the U.S. total.

The estimated production-for-consumption of *construction sand and gravel* in the second quarter of 2013 increased in four of the nine geographic divisions compared with that sold or used in the second quarter of 2012. The largest increases in percentages were recorded in the South Atlantic, the Pacific and the West South Central divisions. Production-for-consumption increased in 20 of the 46 States that were estimated. The five leading States, in descending order of production-for-consumption, were Texas, California, Michigan, Arizona, and Colorado. Their combined total production-for-consumption was 77.3 Mt and represented 33% of the U.S. total.

The estimated production-for-consumption of *construction aggregates* in the second quarter of 2013 increased in five of the nine geographic divisions compared with that sold or used in the second quarter of 2012. The largest increases in percentages were recorded in the Pacific, West South Central, and the South Atlantic divisions. Production-for-consumption increased in 17 of the 44 States that were estimated. The five leading States, in descending order of production-for-consumption, were Texas, California, Pennsylvania, Missouri, and Ohio. Their combined total production-for-consumption was 168 Mt and represented 30% of the U.S. total.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

³Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

⁴State not included in quarterly survey.
