## CRUSHED STONE AND SAND AND GRAVEL IN THE FIRST QUARTER 2014

An estimated 222 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the first quarter of 2014, an increase of 5% compared with that of the same period of 2013. The estimated annual output produced for consumption in 2013 was 1.19 billion metric tons (Gt), a slight increase compared with the reported annual output for 2012.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the first quarter of 2014 was 149 Mt, an increase of 10% compared with that of the same period of 2013. The estimated annual output produced for consumption in 2013 was 847 Mt, an increase of 4% compared with the reported annual output for 2012.

The estimated U.S. output of *construction aggregates* produced and shipped for consumption in the first quarter of 2014 was 370 Mt, an increase of 7% compared with that of the same period of 2013. The estimated annual output produced for consumption in 2013 was 2.03 Gt, a slight increase compared with the reported annual output for 2012.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

The estimated *portland cement* consumption increased by 3% in the first quarter of 2014 compared with that of the first quarter of 2013 and increased by 4% for 2013 compared with annual consumption in 2012. This information is obtained from the USGS monthly survey of U.S. cement producers.

The quarterly sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The reason for a large change can be the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously reported data are occasionally revised, and the estimated

quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production-for-consumption of *crushed stone* in the first quarter of 2014 increased in six of the nine geographic divisions compared with that sold or used in the first quarter of 2013. The largest increases were recorded in the Mountain and New England divisions. Production-for-consumption increased in 24 of the 46 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, Florida, Missouri, Oklahoma, and Pennsylvania. Their combined total production-for-consumption was 85.5 Mt and represented an increase of 8% compared with that in the first quarter of 2013.

The estimated production-for-consumption of *construction sand and gravel* in the first quarter of 2014 increased from first quarter 2013 levels in seven of the nine geographic divisions. The largest increases in percentages were recorded in the Pacific and Mountain divisions. Production-for-consumption increased in 26 of the 46 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, California, Washington, Arizona, and Colorado. Their combined total production-for-consumption was 63.9 Mt which was an increase of 21% compared with that in the first quarter of 2013.

The estimated production-for-consumption of *construction aggregates* in the first quarter of 2014 increased in six of the nine geographic divisions compared with that sold or used in the first quarter of 2013. The largest increases were recorded in the Mountain and Pacific divisions. Production-for-consumption increased in 23 of the 43 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, California, Florida, Missouri, and Washington. Their combined total production-for-consumption was 133 Mt and increased 17% when compared with that of the same period of 2013.

<sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

<sup>2</sup>Sales region equivalent to U.S. Census Bureau Geographic Division as follows: New England (CT, MA, ME, NH, RI, VT); Middle Atlantic (NJ, NY, PA); East North Central (IL, IN, MI, OH, WI); West North Central (IA, KS, MN, MO, NE, ND, SD); South Atlantic (DE, FL, GA, MD, NC, SC, VA, WV); East South Central (AL, KY, MS, TN); West South Central (AR, LA, OK, TX); Mountain (AZ, CO, ID, MT, NM, NV, UT, WY); Pacific (AK, CA, HI, OR, WA).

<sup>3</sup>Data may not add to totals shown because of independent rounding and differences between projected totals by States and by divisions.

<sup>4</sup>Compared with same period of preceding year; all percentages are calculated using unrounded totals.

<sup>5</sup>Includes all 50 States.

<sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

<sup>2</sup>Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

<sup>3</sup>Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

<sup>4</sup>State not included in quarterly survey.
