

2009 Minerals Yearbook

STONE, DIMENSION

STONE, DIMENSION

By Thomas P. Dolley

Domestic survey data and tables were prepared by Samir Hakim, statistical assistant.

U.S. production of dimension stone in 2009 was estimated to be 1.62 million metric tons (Mt) valued at \$328 million, which was a 10% decrease in tonnage and a slight increase in value compared with those of 2008 (table 1). Exports decreased in value by 27% to \$48.3 million, and imports for consumption decreased in value by 37% to \$1.35 billion. The value of apparent consumption was estimated to be \$1.6 billion in 2009, which was a 32% decrease compared with that of 2008. Trade data in this report are from the U.S. Census Bureau. All percentages in the report were computed using unrounded data.

In recent years, most dimension stone has been used in construction applications, with the largest portions being sold or used as ashlar and partially squared pieces, curbing, flagstone, and rough block for building and construction. Monumental stone, another major type, includes memorials of various kinds.

Dimension stone is a natural rock material quarried for the purpose of obtaining blocks or slabs that meet specifications as to size (width, length, and thickness) and shape. Color, grain texture and pattern, and surface finish of the stone also are normal requirements by both customers and the stone industry. Durability (a time measure of the ability of dimension stone to endure and maintain its essential and distinctive characteristics), strength, and the ability of the stone to take a polish are other important selection criteria.

Although various igneous, metamorphic, and sedimentary rocks are used as dimension stone, the principal rock types are granite, limestone, marble, sandstone, and slate. Other varieties of dimension stone that are normally considered to be special minor types include alabaster (massive gypsum) and soapstone (massive talc). A more detailed discussion describing specific types of dimension stone can be found in the 2007 dimension stone Minerals Yearbook chapter.

Production

Dimension stone production data for the United States are derived by the U.S. Geological Survey (USGS) from a voluntary canvass of U.S. quarry producers of rough and dressed dimension stone. Of the 239 dimension stone-producing operations included in the survey for 2009, 132 (55%) responded, which represented 52% of the tonnage; the remaining tonnage was estimated based partly on prior years' reporting and partly on employment data provided by the Mine Safety and Health Administration (MSHA).

Data in this report cover rough crude quarried stone, irregular-shaped and rectangular blocks, and more highly processed stone. A number of other terms also are used to describe further processing, such as "worked," "dressed," "finished," and "manufactured." These and other terms used by the dimension stone industry describe such features as the mineral composition of the rock, the shape of the product, the

method of finishing a stone, and the type of finish applied. No adjustments are made in the data to account for the sometimes substantial losses in processing rough stone into dressed stone. Sold or used data are considered to be equivalent to production because changes in stocks are not surveyed.

In 2009, limestone accounted for 548,000 metric tons (t) (34%) of the total domestic dimension stone production of 1.62 Mt, followed by granite (29%), miscellaneous stone (19%), sandstone (15%), marble (2%), and slate (1%). Granite accounted for about \$111 million (34%) of the \$328 million total domestic production value, followed by limestone (32%), miscellaneous (15%), sandstone (11%), marble (4%), and slate (4%).

Production of dimension stone was reported in 37 States. Leading producer States were, in descending order by tonnage, Texas, Wisconsin, Indiana, Georgia, and Vermont. These States accounted for about 56% of domestic production. Leading producer States were, in descending order by value, Texas, Indiana, Vermont, Wisconsin, and New York. These States contributed about 52% of the value of domestic production (table 3).

The top five producing companies were Buechel Stone Corp. in Wisconsin, Champlain Stone, Ltd. in New York, Eden Stone Co. Inc. in Wisconsin, Mezger Enterprises Inc. in Texas, and Swenson Granite Co. LLC in New Hampshire and Vermont. These companies produced about 27% of domestic production in tonnage and about 23% of production value. The leading 14 companies accounted for 50% of total domestically produced tonnage and 50% of the value.

Rough stone blocks split or cut from a quarry face are transported to processing plants that typically are located at the quarry site, at least for preliminary sizing. Further dressing, which includes final sizing and finishing operations, such as decorating, edging, and polishing, also may be done at the quarry site.

Granite.—Dimension granite was produced by 45 companies operating 74 quarries in 18 States. Production was 469,000 t valued at \$111 million. Granite production tonnage increased by 1% and the value increased by about 4% compared with those of 2008. The top five producing States were, in descending order by tonnage, Georgia, Vermont, North Carolina, Massachusetts, and New Hampshire. Georgia accounted for 30% of the tonnage and 10% of the value of U.S. granite production (table 4).

Champlain Stone Ltd., Cold Spring Granite Co., Fletcher Granite Co., North Carolina Granite Corp., and Swenson Granite Co. LLC, which were the leading producers, accounted for 60% of U.S. granite production by tonnage and 73% of U.S. granite production by value.

Limestone.—Dimension limestone was produced by 37 companies from 50 quarries in 12 States. Production decreased in 2009 by about 9% to 548,000 t from 603,000 t in 2008.

The value increased by 21% to \$106 million in 2009 from \$87.9 million in 2008. The top four producing States were, in descending order by tonnage, Texas, Indiana, Wisconsin, and Arkansas. Indiana, Texas, and Wisconsin combined produced 87% of the U.S. tonnage and 81% of the value (table 5). Buechel Stone, Elliott Stone Co. Inc., Indiana Limestone Co., Mezger Enterprises, and Victor Oolitic Stone Co., which were the leading producers, accounted for 51% of all U.S. limestone tonnage and about 42% of the value.

Sandstone.—Dimension sandstone was produced by 57 companies that operated 70 quarries in 16 States. Production decreased by 28% to 248,000 t in 2009 from 346,000 t in 2008. The value decreased by 27% to \$36.7 million in 2009 from \$50.2 million in 2008. The top five producing States were, in descending order by tonnage, Arizona, Oklahoma, Ohio, Pennsylvania, and Arkansas (table 6).

Cornerstone Materials LLC, Drake Stone Products Inc., Flagstone Heights Inc., Harley Gray Stone Co., and Jude Stone Quarry Inc., which were the leading producers, accounted for about 45% of the tonnage and 41% of the value of domestic production.

Marble.—Marble was mined by five companies that operated six quarries in five States. Production tonnage decreased by 17% in 2009 to 35,300 t valued at \$12.8 million from 42,600 t valued at \$15.1 million in 2008 (table 10). Georgia was the leading producing State, followed by Vermont, Tennessee, Colorado, and Wisconsin. The leading producers were Georgia Marble Co. (a subsidiary of Polycor Inc.) and Vermont Quarries Corp.

Slate.—Slate was produced by 16 companies that operated 21 quarries in 6 States. Production decreased by 19% to 21,600 t in 2009 from 26,900 t in 2008. The value decreased by about 20% to \$14 million in 2009 from \$17.5 million in 2008 (table 12). The top producing States were Vermont, New York, and Pennsylvania. The leading producers were Newmont Slate Co., Inc., Ritchie Bros. Slate Co. Inc., and Western Slate Inc.

Consumption

For the purposes of this report, apparent consumption is calculated to be production plus imports for consumption minus exports; changes in industry stocks are not considered because such data are not available. Value data are used in the apparent consumption calculation because tonnage data are not available for imports and exports. Overall, the value of apparent consumption of dimension stone in the United States was estimated to be \$1.6 billion in 2009; this was a 32% decrease compared with that of 2008.

Rough stone represented about 53% of the tonnage and 40% of the value of all dimension stone sold or used by domestic producers, which included exports. The leading uses of rough stone, by tonnage, were in building and construction (47%), and in irregular-shaped stone (30%). Dressed stone represented 47% by tonnage and 60% by value of the total stone sold or used. The leading uses within dressed stone, by tonnage, were in other uses (including panels and veneer, tile, blackboards, exports, unspecified uses, structural and sanitary, and unlisted uses) (27%); ashlars and partially squared pieces (24%); and curbing (19%) (table 7).

Uses for the different varieties of dimension stone varied considerably. The major uses of granite sold or used in 2009, by tonnage, were in curbing (29%), monumental rough stone (28%), rough blocks for building and construction (18%), and in other rough stone, including exports and unlisted uses (7%) (table 8). Primary uses of limestone, by tonnage, were in rough blocks for building and construction (37%), and in dressed stone for ashlar and partially squared pieces (24%) (table 9). Primary uses of marble, by tonnage, were in rough stone, other uses (including monumental stone, and unlisted and unspecified uses) (41%), and dressed stone (32%) (table 10). Primary uses of sandstone, by tonnage, were in dressed stone for flagging (32%), and in rough blocks for building and construction (27%) (table 11). Dimension slate sold or used by producers in the United States in 2009, by tonnage, was principally for roofing (73%), flagging (17%), and other uses (7%) (table 12).

Prices

The average 2009 value for dimension stone was \$202 per metric ton, a 13% increase from 2008 based on the USGS canvass. The average unit values for different types of dimension stone were granite, \$237 per ton; limestone, \$193 per ton; marble, \$363 per ton; sandstone, \$147 per ton; and slate, \$646 per ton. Available price data show considerable variation. Prices are substantially different not only for the kind of stone, but also for the appearance of the same kind of stone. Color, grain structure, and finish contribute significantly to price and marketability.

Foreign Trade

Exports.—In 2009, the value of total exports of dimension stone decreased by 27% in value to \$48 million compared with those of 2008; granite accounted for 50% of the export value. The largest share of granite was exported to China (table 13). Although unreported, a significant amount of granite was probably exported back to the U.S. market.

Imports.—The value of imports for consumption of dimension stone types decreased by 37% in 2009 to \$1.35 billion (table 1). Brazil was the leading source of imported granite in 2009, accounting for 37% by value. China, which continued to be a major source of granite, accounted for 28% of granite imports by value. Other important granite import sources included Italy (14%) and India (13%) (table 14). In 2009, China superseded Italy as a major source of rough and dressed marble import tonnage, but not value (tables 15, 16). Duties on imported dimension stone are listed in table 2.

World Review

World dimension stone production, including the United States, was estimated to be approximately 107 Mt in 2009. Although there was probably some small-scale production in the majority of the world's nations, dimension stone was produced and officially reported in about 29 countries. The top five producing countries in 2009 were, in descending order by tonnage, China, India, Turkey, Iran, and Italy, and these countries accounted for about 71% of the world's production.

Global production of dimension stone was unchanged in 2009 compared with that of 2008. The United States ranked 10th in world production of dimension stone in 2009 (Napoli, 2010, p. 63).

Outlook

The global economic downturn that commenced in late 2008 and continued through 2009 had a negative effect on both domestic and international sectors of the dimension stone industry. U.S. apparent consumption, production, exports, and imports of dimension stone all declined. The economic downturn resulted in decreased demand for the use of stone in both commercial and residential applications in 2009. Increased activity was observed in the U.S. dimension stone industry by yearend 2009 and continuing into 2010. Industry observers did not anticipate a recovery of the global dimension stone industry until 2010 (Napoli, 2010).
