## Aluminum Worksheet Notes

### Data Sources

Sources of data for the aluminum worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); and Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). The years of publication and corresponding years of data coverage are listed in the References section below. Other data sources include the Materials Survey—ALUMINUM, compiled for the Office of Defense Mobilization by the U.S. Department of Commerce, 1956, (MS–Al); Metal Prices in the United States through 1998 (MP98), compiled and published by the U.S. Geological Survey in 1999; U.S. Bureau of Labor Statistics; the London Metal Exchange (LME); and the Aluminum Association, Inc. The “E” indicates that the United States was a net exporter of aluminum for that year.

### Primary Production

Data are domestic primary aluminum production. Data are reported in the MR and MYB.

### Secondary Production Old Scrap

Domestic metal recovered from post-consumer aluminum scrap. Data are reported in the MR and MYB. Production data are not available for 1900–38.

### Secondary Production New Scrap

Domestic metal recovered from fabrication aluminum scrap. Data are reported in the MR and MYB. Production data are not available for 1900–12.

### Secondary Production

Total domestic metal recovered from old and new aluminum scrap. Data are reported in the MR and MYB. Production data are not available for 1900–12.

### Shipments

Data are the net shipments to domestic aluminum markets. Data since 2001 include shipments to Canadian aluminum markets. Data are from the Aluminum Association, Inc. Data are not available prior to 1941.

### Imports

Aluminum imports into the United States. Data are reported in two sources. Import data for 1911–20 are reported in the MS–Al and data for 1921 to the most recent year are reported in the MR and MYB. Data for 1900–10 are not available.

### Exports

Aluminum exports from the United States. Data are reported in two sources. Export data for 1917–20 are reported in the MS–Al and data for 1921 to the most recent year are reported in the MR and MYB. Data for 1900–16 are not available.

### Industry Stocks

Industry stocks data as of end of year (December 31). Data are reported in the MR and MYB. Stock data for 1900–48 are not available.

### LME Stocks

London Metal Exchange (LME) stocks of primary aluminum and aluminum alloy ingots at the end of the year (December 31) in U.S. warehouses only. Data are from the LME. Data prior to 1991 are not available.

### Government Stocks

U.S. Government stocks as of end of year (December 31), of primary aluminum ingots held in the National Defense Stockpile (NDS). Data are reported in the MR and MYB. Data prior to 1949 are not available.

### Total Stocks

Total aluminum stocks of the United States, includes industry, LME, and NDS stocks as of end of year (December 31). Data sources include the MR and the LME. Data prior to 1916 are not available.

### Apparent Consumption

Estimated U.S. aluminum apparent consumption was calculated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRIMARY PRODUCTION} + \text{SECONDARY RECOVERY (OLD SCRAP)} + \text{IMPORTS} - \text{EXPORTS} \pm \text{ADJUSTMENTS FOR INVENTORY (STOCK) CHANGES.}$$

If data for a particular category were unavailable, the data were presumed to be zero in making the above calculation.

**Unit Value (\$/t)**

Unit value is defined as the value of 1 metric ton (t) of aluminum. It is calculated using the “Annual Average Primary Aluminum Price,” in U.S. dollars, as reported in the MP98 and the MYB.

**Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

**World Production**

Data are defined as world primary aluminum production. Data are reported in the MR and MYB.

**Employment**

Data are the number of production workers employed at domestic primary aluminum smelters. Data are from the U.S. Bureau of Labor Statistics.

**Net Import Reliance**

Data are defined by the following equation, as a percentage (%) of apparent consumption.

$$\text{IMPORTS} - \text{EXPORTS} \pm \text{ADJUSTMENTS FOR GOVERNMENT AND INDUSTRY STOCK CHANGES.}$$

Data are reported in the CDS and MCS. The “E” indicates that the United States was a net exporter of aluminum for that year.
