Silver Worksheet Notes

Data Sources

The sources of data for the silver worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); and Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). Metal price data were from Metal Prices in the United States through 1998 (MP98). The years of publication and corresponding years of data coverage are listed in the References section below.

Mine Production

Mine production data for 1900 to the most recent year represent the recoverable silver content of precious-metal ores that were extracted from domestic mines. Data were from the MR and the MYB.

Primary Production

Primary production data for 1900 to the most recent year represent the quantity of silver that were recovered from ores, concentrates, dorés, and precipitates from both domestic and foreign sources in domestic refineries. Data for primary silver production for 1995 and 1996 are not available owing to lack of reporting by industry. Data were from the MR and the MYB.

Secondary Production

Secondary silver production data for 1901–93 represent the silver recovered from old silver scrap and waste at domestic refineries, data were from the MR and the MYB. Secondary production from old scrap has not been reported separately from new scrap since 1993. Secondary production data for 1994 to the most recent year include new scrap and were from the MYB.

Shipments

Shipment data for 1970–97 represent the silver content of various silver materials that were shipped from Government stockpiles to domestic recipients. Data were from the CDS and the MCS.

Imports

Import data for 1908 to the most recent year represent the recoverable silver content in imported silver bullion. Data were from the MR and the MYB.

Exports

Export data for 1908 to the most recent year represent the recoverable silver content in exported silver bullion. Data were from the MR and the MYB.

Stocks

Stock data for 1967 to the most recent year represent the silver content of various silver materials that were stockpiled at industrial facilities consisting of producers, consumers, and dealers. Stock data were from the MYB. Industry stock data were not available prior to 1967.

Apparent Consumption

Apparent consumption data represent the total quantity of silver that was consumed for industrial, art, and coinage purposes. Apparent consumption data for 1900 was estimated by linear extrapolation back from the series for 1901–10. Apparent consumption data for 1995–96 were interpolated from the apparent consumption data series. Apparent consumption data for 1901–94 and 1997 to the most recent year were from the MCS, MR, and the MYB.

Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of silver apparent consumption. Unit value data for 1900–98 were from the MP98. Unit value data for 1999 to the most recent year were from the MYB. Unit value data for 1900 to the most recent year represent the average value per metric ton of silver of a minimum purity of 99.9 percent.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production data for 1900 to the most recent year represent the recoverable silver content of precious-metal ores that were extracted from mines throughout the world. World production data were from the MR and the MYB.
