

Nonmetallic Mineral Products Industry Indexes

December 2016

This report analyzes and explains the U.S. Geological Survey's (USGS) monthly leading and coincident indexes for the nonmetallic mineral products industry. This industry was classified as the stone, clay, glass, and concrete products industry (SIC 32) under the Standard Industrial Classification system, which has been replaced by the North American Industry Classification System (NAICS 327). This industry processes certain industrial minerals, minerals that are neither metals nor fuels, into useful products. More than 50 percent of the total value of these products is shipped to the highly cyclical construction industry. The indexes have been computed for each month back to 1948 and are available on the World Wide Web at: <http://minerals.usgs.gov/minerals/pubs/imii/scghist.xls>

Analysis

The **nonmetallic mineral products industry leading index** increased to 255.0 in November from an upwardly revised 252.6 in October, its 6-month smoothed growth rate increased to 3.2% in November from an upwardly revised 1.6% in October (table 1). The 6-month smoothed growth rate is a compound annual rate that measures the near-term trend. A growth rate above +1.0% is usually a signal of future growth in industry activity, while a growth rate below -1.0% points to a decrease in activity.¹

After declining from November 2015 through March 2016, the leading index growth rate was above the growth rate threshold (+1.0%) that could suggest an increase in industry activity for April and May, declined below the threshold in June, then moved above in July, below in August, and above September through November. In November, the largest positive contribution was the S&P stock price index, building products companies [0.5], and the largest negative contribution was the index of new private housing units authorized by permits [-0.4] (table 2).

The **nonmetallic mineral products industry coincident index**, which measures current industry activity, increased to 145.5 in November from an upwardly revised 144.0 in October, its 6-

¹The 6-month smoothed growth rate is a compound annual rate based on the ratio of the current month's index to its average level during the preceding 12 months.

month smoothed growth rate increased to 2.1% in November from an upwardly revised 0.4% in October. The coincident index growth rate had declined steadily February through August. September and October reversed that trend, and the November coincident index growth rate is above +1.0% that could signal strength in the nonmetallic mineral products industry near term. In November, the two largest positive contributions were the industrial production index, nonmetallic mineral products [0.6] and total employee hours, nonmetallic mineral products [0.3]. There were no negative contributions to the coincident index for November (table 2).

Explanation

The USGS uses the same methodology for the nonmetallic mineral products indexes that it uses for the metal manufacturing indexes in the *Metal Industry Indicators*. This methodology consists of constructing and tracking, each month, two composite indexes of diverse economic indicators. The composite leading index for nonmetallic mineral products signals, several months in advance, major changes in current economic activity as measured by a composite coincident index. The construction of the leading and coincident indexes follows well-established procedures for the analysis of cyclical indicators that were developed at the National Bureau of Economic Research, the U.S. Department of Commerce, and the Center for International Business Cycle Research.

Coincident indicators

The indicators selected to represent current activity in the coincident index for the nonmetallic mineral products industry are industrial production, the value of shipments in 1982 dollars, and total employee hours worked. Previously, these indicators reflected activity in the stone, clay, glass, and concrete products industry (SIC 32). The source agencies for these data, the Bureau of Labor Statistics (BLS), U.S. Census Bureau, and the Federal Reserve Board have completed their conversions to the NAICS. These indicators now reflect activity in the nonmetallic mineral products industry (NAICS 327). According to BLS, approximately 99% of the employment in NAICS 327 was classified in SIC 32.

Leading indicators

Leading indicators represent various economic activities that can point to near-term changes in industry activity. The following four indicators proved to be reliable at signaling major changes in economic activity in the nonmetallic mineral products industry: 1) average weekly hours worked in the nonmetallic mineral products industry, 2) an index of new private housing units authorized by building permits in the United States, 3) the Standard & Poor's stock price index for building products companies, and 4) the yield spread between the 10-year Treasury Note interest rate and the federal funds interest rate.

This report was produced at the U.S. Geological Survey (USGS) by the National Minerals Information Center. For more information about these indexes, contact Jeff Busse (703-648-4914), e-mail (jbusse@usgs.gov). Data provided by Jacob Fuhr and Annie Hwang.

The USGS also produces *Mineral Industry Surveys* (MIS) or *Minerals Yearbook* chapters for most industrial minerals important to the U.S. economy. These minerals include cement, clay and shale, crushed stone, dimension stone, and construction sand and gravel. Information on how to access these reports is available on the World Wide Web at: <http://minerals.usgs.gov/minerals/pubs/>

Tables and charts follow.

Table 1.
The Nonmetallic Mineral Products Industry Indexes and Growth Rates

	<u>Leading Index</u>		<u>Coincident Index</u>	
	<u>(1977 = 100)</u>	<u>Growth Rate</u>	<u>(1977 = 100)</u>	<u>Growth Rate</u>
2015				
December	254.1	7.2	145.7	9.3
2016				
January	249.1	2.5	144.4	6.7
February	246.7	0.1	145.0	6.8
March	246.2	-0.5	144.2	4.6
April	250.9	2.6	144.3	4.0
May	251.1	2.3	143.9	2.5
June	249.6	0.7	143.6	1.5
July	251.9	2.3	143.1r	0.2r
August	250.5	0.7	141.7r	-2.0r
September	251.5	1.2	142.9r	-0.7r
October	252.6r	1.6r	144.0r	0.4r
November	255.0	3.2	145.5	2.1

r: Revised

Note: Growth rates are expressed as compound annual rates based on the ratio of the current month's index to the average index during the preceding 12 months.

Table 2.
The Contribution of Nonmetallic Mineral Products Index Component to the Percent Change in the Index from the Previous Month

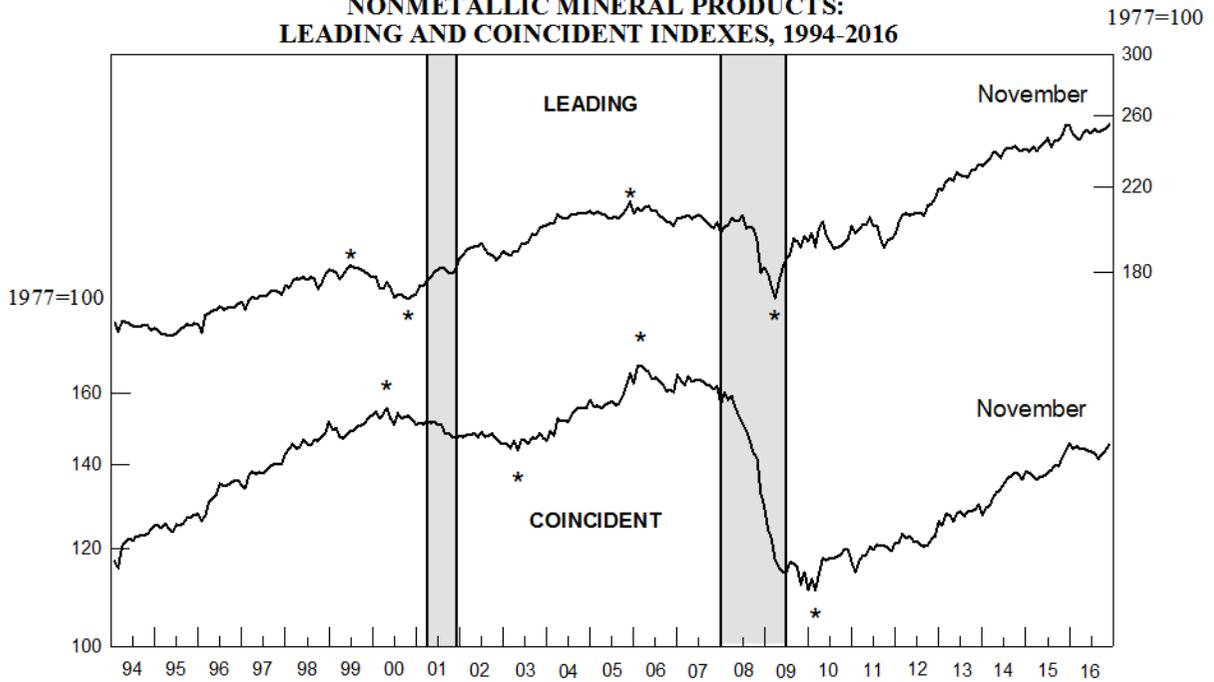

Leading Index	October	November
1. Average weekly hours, nonmetallic mineral products (NAICS 327)	0.4r	0.4
2. Index of new private housing units authorized by permits	0.2r	-0.4
3. S&P stock price index, building products companies	-0.4	0.5
4. Spread between the U.S. 10-year Treasury Note and the federal funds rate	0.1	0.4
Trend adjustment	0.1	0.1
Percent change (except for rounding differences)	0.4r	1.0
Coincident Index		
1. Industrial production index, nonmetallic mineral products (NAICS 327)	0.2r	0.6
2. Total employee hours, nonmetallic mineral products (NAICS 327)	0.3	0.3
3. Shipments of nonmetallic mineral products (NAICS 327)	0.2	NA
Trend adjustment	0.1	0.1
Percent change (except for rounding differences)	0.7r	1.0

Chart 1.

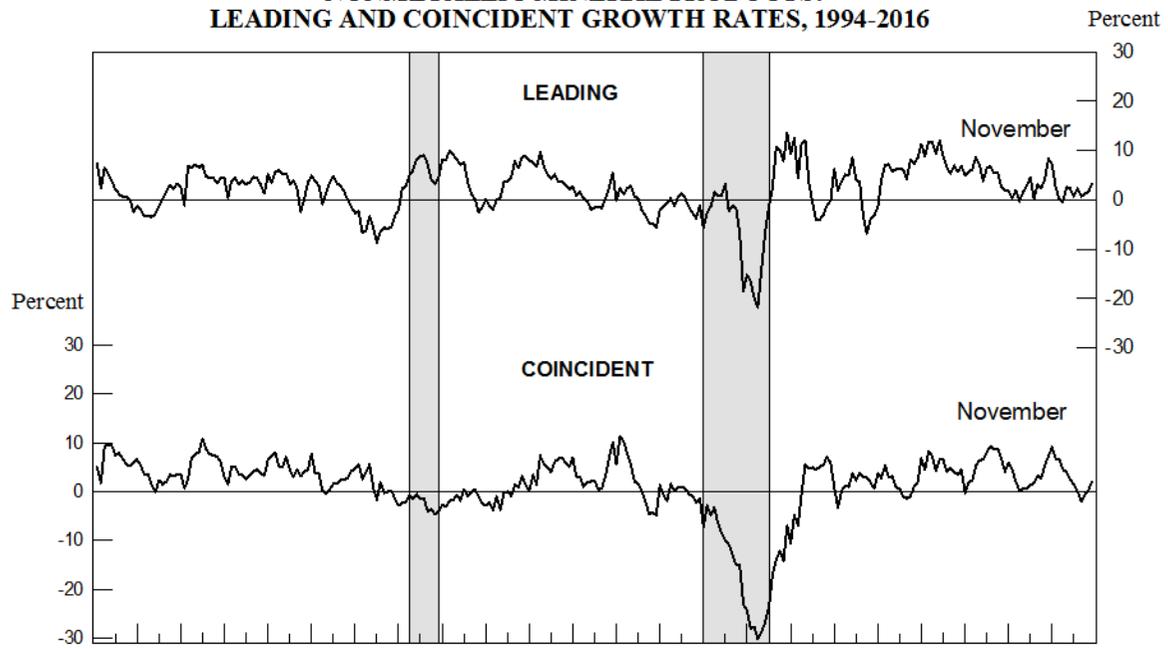

**NONMETALLIC MINERAL PRODUCTS:
LEADING AND COINCIDENT INDEXES, 1994-2016**

Shaded areas are business cycle recessions. Asterisks (*) signify peaks (the end of an expansion) and troughs (the end of a downturn) in the economic activity reflected by the indexes. More than 50% of the value of shipments of nonmetallic mineral products is used in the construction industry.

Chart 2.

**NONMETALLIC MINERAL PRODUCTS:
LEADING AND COINCIDENT GROWTH RATES, 1994-2016**

Shaded areas are business cycle recessions. The growth rates are expressed as compound annual rates based on the ratio of the current month's index to its average level during the preceding 12 months.
